(B) APPROVAL OF COMPENSATION BY FEDERAL MEMBERS.—Notwithstanding any other provision of law, or any bylaw adopted by the Corporation, all rates of compensation, including benefit plans and salary ranges, for officers and employees of the Board, shall be jointly approved by the Federal members of the Board.

(C) LIMITATION ON OTHER COMPENSATION.—No officer or employee of the Corporation may receive any salary or other compensation (except for compensation for services on boards of directors of other organizations that do not receive funds from the Corporation, on committees of such boards, and in similar activities for such organizations) from any sources other than the Corporation for services rendered during the pe-

riod of the employment of the officer or employee by the Corporation.

(5) SERVICE ON OTHER BOARDS.—Service by any officer on boards of directors of other organizations, on committees of such boards, and in similar activities for such organizations shall be subject to annual advance approval by the Board and subject to the provisions of the Corporation's Statement of Ethical Conduct.

(6) RULE OF CONSTRUCTION.—No officer or employee of the Board or of the Corporation shall be considered to be an officer or employee of the United States Government or of the government of the District of Columbia.

(b) ADVISORY COMMITTEES.—The Board—

(1) shall establish a standing public safety advisory committee to assist the Board in carrying out its duties and responsibilities under this subtitle; and

(2) may establish additional standing or ad hoc committees, panels, or councils as the Board determines are necessary.

(c) SELECTION OF AGENTS, CONSULTANTS, AND EXPERTS.—

(1) IN GENERAL.—The Board shall select parties to serve as its agents, consultants, or experts in a fair, transparent, and objective manner.

(2) BINDING AND FINAL.—If the selection of an agent, consultant, or expert satisfies the requirements under paragraph (1), the selection of that agent, consultant, or expert shall be final and binding.

SEC. 205. NONPROFIT AND NONPOLITICAL NATURE OF THE CORPORATION.

(a) STOCK.—The Corporation shall have no power to issue any shares of stock, or to declare or pay any dividends.

(b) PROFIT.—No part of the income or assets of the Corporation shall inure to the benefit of any director, officer, employee, or any other individual associated with the Corporation, except as salary or reasonable compensation for services.

(c) POLITICS.—The Corporation may not contribute to or otherwise support any political party or candidate for elective public office.

(d) PROHIBITION ON LOBBYING ACTIVITIES.—The Corporation shall not engage in lobbying activities (as defined in section 3(7) of the Lobbying Disclosure Act of 1995 (5 U.S.C. 1602(7))).

SEC. 206. POWERS, DUTIES, AND RESPONSIBILITIES OF THE CORPORATION.

(a) GENERAL POWERS.—The Corporation shall have the authority to do the following:

(1) To adopt and use a corporate seal.

(2) To have succession until dissolved by an Act of Congress.

(3) To prescribe, through the actions of its Board, bylaws not inconsistent with Federal law and the laws of the District of Columbia, regulating the manner in which the Corporation's general business may be conducted and the manner in which the privileges granted to the Corporation by law may be exercised.

(4) To exercise, through the actions of its Board, all powers specifically granted by the provisions of this subtitle, and such incidental powers as shall be necessary.

(5) To hold such hearings, sit and act at such times and places, take such testimony, and receive such evidence as the Corporation considers necessary to carry out its responsibilities and duties.

(6) To obtain grants and funds from and make contracts with individuals, private companies, organizations, institutions, and Federal, State, regional, and local agencies.

(7) To accept, hold, administer, and utilize gifts, donations, and bequests of property, both real and personal, for the purposes of aiding or facilitating the work of the Corporation.

(8) To issue notes or bonds to purchasers of such instruments in the private capital markets.

(9) To incur indebtedness to carry out the purposes of this subtitle.

(10) To spend funds under paragraph (6) in a manner authorized by the Board, but only for purposes that will advance or enhance public safety communications consistent with this Act.

(11) To establish reserve accounts with funds that the Corporation may receive from time to time that exceed the amounts required by the Corporation to timely pay its debt service and other obligations.

(12) To expend the funds placed in any reserve accounts established under paragraph (11) (including interest earned on any such amounts) in a manner authorized by the Board, but only for purposes that—

(A) will advance or enhance public safety communications consistent with this Act; or

(B) are otherwise approved by an Act of Congress.

(13) To take such other actions as the Corporation (through its Board) may from time to time determine necessary, appropriate, or advisable to accomplish the purposes of this subtitle.

(b) Duty and Responsibility to Deploy and Operate a Nationwide Public Safety Interoperable Broadband Network.—

(1) In general.—The Corporation shall hold the single public safety wireless license granted under section 201 and take all actions necessary to ensure the building, deployment, and operation of a nationwide public safety interoperable broadband network in consultation with Federal, State, tribal, and local public safety entities, the Director of NIST, the Commission, and the public safety advisory committee established in section 204(b)(1), including by, at a minimum—

(A) ensuring nationwide standards for use and access of the network;

(B) issuing open, transparent, and competitive requests for proposals to private sector entities for the purposes of building, operating, and maintaining the network;

(C) encouraging that such requests leverage, to the maximum extent economically desirable,

existing commercial wireless infrastructure to speed deployment of the network; and

(D) managing and overseeing the implementation and execution of contracts or agreements with non-Federal entities to build, operate, and maintain the network.

(2) INTEROPERABILITY.—In carrying out the duties and responsibilities of this subsection, including issuing requests for proposals, the Corporation shall—

(A) ensure the safety, security, and resiliency of the network, including requirements for protecting and monitoring the network to protect against cyberattack;

(B) promote competition in the equipment market, including devices for public safety communications, by requiring that equipment for use on the network be—

(i) built to open, non-proprietary, commercially available standards;

(ii) capable of being used by any public safety entity and by multiple vendors across all public safety broadband networks operating in the 700 MHz band; and

(iii) backward-compatible with existing second and third generation commercial

networks to the extent that such capabilities are necessary and technically and economically reasonable; and

(C) promote integration of the network with public safety answering points or their equivalent.

(3) RURAL COVERAGE.—In carrying out the duties and responsibilities of this subsection, including issuing requests for proposals, the Corporation, consistent with the license granted under section 201, shall require deployment phases with substantial rural coverage milestones as part of each phase of the construction and deployment of the network. To the maximum extent economically desirable, such proposals shall include partnerships with existing commercial mobile providers to utilize cost-effective opportunities to speed deployment in rural areas.

(4) EXECUTION OF AUTHORITY.—In carrying out the duties and responsibilities of this subsection, the Corporation may—

(A) obtain grants from and make contracts with individuals, private companies, and Federal, State, regional, and local agencies;

(B) hire or accept voluntary services of consultants, experts, advisory boards, and panels to

aid the Corporation in carrying out such duties and responsibilities;

(C) receive payment for use of—

(i) network capacity licensed to the Corporation; and

(ii) network infrastructure constructed, owned, or operated by the Corporation; and

(D) take such other actions as may be necessary to accomplish the purposes set forth in this subsection.

(c) OTHER SPECIFIC DUTIES AND RESPONSIBILITIES.—

(1) ESTABLISHMENT OF NETWORK POLICIES.—In carrying out the requirements under subsection (b), the Corporation shall develop—

(A) requests for proposals with appropriate—

(i) timetables for construction, including by taking into consideration the time needed to build out to rural areas and the advantages offered through partnerships with existing commercial providers under paragraph (3);

(ii) coverage areas, including coverage in rural and nonurban areas;

(iii) service levels;

(iv) performance criteria; and

(v) other similar matters for the construction and deployment of such network;

(B) the technical and operational requirements of the network;

(C) practices, procedures, and standards for the management and operation of such network;

(D) terms of service for the use of such network, including billing practices; and

(E) ongoing compliance review and monitoring of the—

(i) management and operation of such network;

(ii) practices and procedures of the entities operating on and the personnel using such network; and

(iii) necessary training needs of network operators and users.

(2) STATE AND LOCAL PLANNING.—

(A) REQUIRED CONSULTATION.—In developing requests for proposals and otherwise carrying out its responsibilities under this Act, the Corporation shall consult with regional, State, tribal, and local jurisdictions regarding the dis-

tribution and expenditure of any amounts required to carry out the policies established under paragraph (1), including with regard to the—

(i) construction of an Evolved Packet Core and any Radio Access Network build out;

(ii) placement of towers;

(iii) coverage areas of the network, whether at the regional, State, tribal, or local level;

(iv) adequacy of hardening, security, reliability, and resiliency requirements;

(v) assignment of priority to local users;

(vi) assignment of priority and selection of entities seeking access to or use of the nationwide public safety interoperable broadband network established under subsection (b); and

(vii) training needs of local users.

(B) METHOD OF CONSULTATION.—The consultation required under subparagraph (A) shall occur between the Corporation and the single officer or governmental body designated under section 222(d).

(3) LEVERAGING EXISTING INFRASTRUCTURE.—In carrying out the requirement under subsection (b), the Corporation shall enter into agreements to utilize, to the maximum extent economically desirable, existing—

(A) commercial or other communications infrastructure; and

(B) Federal, State, tribal, or local infrastructure.

(4) MAINTENANCE AND UPGRADES.—The Corporation shall ensure the maintenance, operation, and improvement of the nationwide public safety interoperable broadband network established under subsection (b), including by ensuring that the Corporation updates and revises any policies established under paragraph (1) to take into account new and evolving technologies.

(5) ROAMING AGREEMENTS.—The Corporation shall negotiate and enter into, as it determines appropriate, roaming agreements with commercial network providers to allow the nationwide public safety interoperable broadband network to roam onto commercial networks and gain prioritization of public safety communications over such networks in times of an emergency.

(6) NETWORK INFRASTRUCTURE AND DEVICE CRITERIA.—The Director of NIST, in consultation with the Corporation and the Commission, shall ensure the development of a list of certified devices and components meeting appropriate protocols and standards for public safety entities and commercial vendors to adhere to, if such entities or vendors seek to have access to, use of, or compatibility with the nationwide public safety interoperable broadband network established under subsection (b).

(7) REPRESENTATION BEFORE STANDARD SETTING ENTITIES.—The Director of NIST, in consultation with the Corporation, the Commission, and the public safety advisory committee established under section 204(b)(1), shall represent the interests of public safety users of the nationwide public safety interoperable broadband network established under subsection (b) before any proceeding, negotiation, or other matter in which a standards organization, standards body, standards development organization, or any other recognized standards-setting entity regarding the development of standards relating to interoperability.

(8) PROHIBITION ON NEGOTIATION WITH FOREIGN GOVERNMENTS.—The Corporation shall not have

the authority to negotiate or enter into any agreements with a foreign government on behalf of the United States.

(d) USE OF MAILS.—The Corporation may use the United States mails in the same manner and under the same conditions as the departments and agencies of the United States.

SEC. 207. INITIAL FUNDING FOR THE CORPORATION.

(a) NTIA LOANS TO THE CORPORATION.—

(1) IN GENERAL.—Prior to the commencement of incentive auctions to be carried out under section 309(j)(8)(F) of the Communications Act of 1934 or the auction of spectrum pursuant to section 302, the NTIA is authorized to make loans to the Corporation.

(2) CONDITION OF LOANS.—At the time of application for, and as a condition to, any such loan, the Corporation shall file with the NTIA a statement with respect to the anticipated use of the proceeds of the loan.

(3) NTIA APPROVAL.—If the NTIA determines that such loan is necessary for the Corporation to carry out its duties and responsibilities under this subtitle and that the Corporation has submitted a plan which provides as reasonable an assurance of prompt repayment as may be feasible under the cir-

cumstances, then the NTIA shall so certify to the Secretary of the Treasury, and issue notes or other obligations to the Secretary of the Treasury pursuant to subsection (b).

(b) NTIA NOTES ISSUED TO TREASURY.—

(1) IN GENERAL.—To enable the NTIA to make loans under subsection (a), the NTIA is authorized to issue to the Secretary of the Treasury notes or other obligations, in such forms and denominations, bearing such maturities, and subject to such terms and conditions, as may be prescribed by the Secretary of the Treasury.

(2) INTEREST ON NOTES.—

(A) ESTABLISHMENT.—Any notes or other obligations issued pursuant to paragraph (1) shall bear interest at a rate determined by the Secretary of the Treasury, taking into consideration the current average market yield on outstanding marketable obligations of the United States of comparable maturities during the month preceding the issuance of the notes or other obligations.

(B) REDUCTION.—The Secretary of the Treasury may reduce the interest rate set forth

under subparagraph (A) if he determines such reduction to be in the national interest.

(3) AUTHORITY OF THE TREASURY TO SELL NOTES.—The Secretary of the Treasury may at any time sell any of the notes or other obligations acquired by him under this subsection. All redemptions, purchases, and sales by the Secretary of the Treasury of such notes or other obligations shall be treated as public debt transactions of the United States.

SEC. 208. PERMANENT SELF-FUNDING; DUTY TO ASSESS AND COLLECT FEES FOR NETWORK USE.

(a) IN GENERAL.—The Corporation is authorized to assess and collect the following fees:

(1) NETWORK USER FEE.—A user or subscription fee from each entity, including any public safety entity or secondary user, that seeks access to or use of the nationwide public safety interoperable broadband network established under this subtitle.

(2) LEASE FEES RELATED TO NETWORK CAPACITY.—

(A) IN GENERAL.—A fee from any entity that seeks to enter into a covered leasing agreement.

(B) COVERED LEASING AGREEMENT.—For purposes of subparagraph (A), a "covered leasing

agreement" means a written agreement between the Corporation and secondary user to permit—

(i) access to network capacity on a secondary basis for non-public safety services; and

(ii) the spectrum allocated to such entity to be used for commercial transmissions along the dark fiber of the long-haul network of such entity.

(3) LEASE FEES RELATED TO NETWORK EQUIPMENT AND INFRASTRUCTURE.—A fee from any entity that seeks access to or use of any equipment or infrastructure, including antennas or towers, constructed or otherwise owned by the Corporation.

(b) ESTABLISHMENT OF FEE AMOUNTS; PERMANENT SELF-FUNDING.—The total amount of the fees assessed for each fiscal year pursuant to this section shall be sufficient, and shall not exceed the amount necessary, to recoup the total expenses of the Corporation in carrying out its duties and responsibilities described under this subtitle for the fiscal year involved.

(c) REQUIRED REINVESTMENT OF FUNDS.—The Corporation shall reinvest amounts received from the assessment of fees under this section in the nationwide public safety interoperable broadband network by using such funds

only for constructing, maintaining, or improving the network.

SEC. 209. AUDIT AND REPORT.

(a) AUDIT.—

(1) IN GENERAL.—The financial transactions of the Corporation for any fiscal year during which Federal funds are available to finance any portion of its operations shall be audited by the Comptroller General of the United States annually in accordance with the principles and procedures applicable to commercial corporate transactions and under such rules and regulations as may be prescribed by the Comptroller General. Each audit conducted by the Comptroller General under this paragraph shall be made available to Congress.

(2) LOCATION.—Any audit conducted under paragraph (1) shall be conducted at the place or places where accounts of the Corporation are normally kept.

(3) ACCESS TO CORPORATION BOOKS AND DOCUMENTS.—

(A) IN GENERAL.—For purposes of an audit conducted under paragraph (1), the representatives of the Comptroller General shall—

(i) have access to all books, accounts, records, reports, files, and all other papers, things, or property belonging to or in use by the Corporation that pertain to the financial transactions of the Corporation and are necessary to facilitate the audit; and

(ii) be afforded full facilities for verifying transactions with the balances or securities held by depositories, fiscal agents, and custodians.

(B) REQUIREMENT.—All books, accounts, records, reports, files, papers, and property of the Corporation shall remain in the possession and custody of the Corporation.

(b) REPORT.—

(1) IN GENERAL.—The Comptroller General of the United States shall submit a report of each audit conducted under subsection (a) to—

(A) the appropriate committees of Congress;

(B) the President; aud

(C) the Corporation.

(2) CONTENTS.—Each report submitted under paragraph (1) shall contain—

(A) such comments and information as the Comptroller General determines necessary to in-

form Congress of the financial operations and condition of the Corporation;

(B) any recommendations of the Comptroller General relating to the financial operations and condition of the Corporation; and

(C) a description of any program, expenditure, or other financial transaction or undertaking of the Corporation that was observed during the course of the audit, which, in the opinion of the Comptroller General, has been carried on or made without the authority of law.

SEC. 210. ANNUAL REPORT TO CONGRESS.

(a) IN GENERAL.—Not later than 1 year after the date of enactment of this Act, and each year thereafter, the Corporation shall submit an annual report covering the preceding fiscal year to the appropriate committees of Congress.

(b) REQUIRED CONTENT.—The report required under subsection (a) shall include—

(1) a comprehensive and detailed report of the operations, activities, financial condition, and accomplishments of the Corporation under this section; and

(2) such recommendations or proposals for legislative or administrative action as the Corporation deems appropriate.

(c) AVAILABILITY TO TESTIFY.—The directors, officers, employees, and agents of the Corporation shall be available to testify before the appropriate committees of the Congress with respect to—

(1) the report required under subsection (a);

(2) the report of any audit made by the Comptroller General under section 209; or

(3) any other matter which such committees may determine appropriate.

SEC. 211. PUBLIC SAFETY ROAMING AND PRIORITY ACCESS.

The Commission may adopt rules, if necessary in the public interest, to improve the ability of public safety networks to roam onto commercial networks and to gain priority access to commercial networks in an emergency if—

(1) the public safety entity equipment is technically compatible with the commercial network;

(2) the commercial network is reasonably compensated; and

(3) such access does not preempt or otherwise terminate or degrade all existing voice conversations or data sessions.

SEC. 212. TRANSITIONAL ANALYSIS OF PUBLIC SAFETY NETWORK ATTRIBUTES.

(a) ESTABLISHMENT OF EVALUATION FRAMEWORK.—Not later than 180 days after the date of enactment of this

Act, the Director of NIST, in consultation with the Secretary of Homeland Security, the Attorney General, and the Director of the Office of Management and Budget, shall develop an evaluation framework. The development of such an evaluation framework shall be informed by a study commissioned by the Director of NIST and completed by an independent and neutral agent, consultant, or expert, who has—

(1) at least 5 years of technical and economic experience in analyzing the costs and effectiveness of communications networks; and

(2) agreed not to contract or subcontract with the Corporation for at least 3 years from the date such study is completed other than for follow-on and related studies.

(b) CONSIDERATIONS.—The evaluation framework required to be developed under subsection (a) shall take into consideration the public safety network attributes identified in a report completed by the Visiting Committee on Advanced Technology of NIST. The report required under this subsection shall identify the desired attributes of the nationwide public safety interoperable broadband network to be established under this title, as well as any other attributes the Secretary of Commerce may request.

(c) REQUIRED EVALUATIONS.—The evaluation framework required to be developed under subsection (a) shall evaluate—

(1) the marginal cost of each public safety network attribute in developing, deploying, and operating the nationwide public safety interoperable broadband network to be established under this title;

(2) the benefit of each public safety network attribute to the nationwide public safety interoperable broadband network;

(3) the economic feasibility of requiring that each public safety attribute be required as part of the nationwide public safety interoperable broadband network;

(4) the resulting competitive vendor supply ecosystem created by each public safety attribute that is a part of the nationwide public safety interoperable broadband network; and

(5) the level of variability in regional requirements for each public safety attribute that is a part of the nationwide public safety interoperable broadband network.

(d) PROVISION OF FRAMEWORK TO THE CORPORATION.—The evaluation framework required to be developed under subsection (a) shall be provided to the Board of Direc-

tors of the Corporation, and the Corporation shall utilize the findings of such framework to develop a cost-benefit analysis to inform the building, deployment, and operation of the nationwide public safety interoperable broadband network to be established under this title.

(e) OMB RESPONSIBILITY.—The Director of the Office of Management and Budget, or his designee, as a member of the Board of Directors of the Corporation, shall have the responsibility to ensure that evaluation framework required to be developed under subsection (a) is appropriately utilized by the Corporation.

SEC. 213. PROHIBITION ON DIRECT OFFERING OF COMMERCIAL TELECOMMUNICATIONS SERVICE DIRECTLY TO CONSUMERS.

(a) IN GENERAL.—The Corporation shall not offer, provide, or market commercial telecommunications or information services directly to consumers.

(b) RULE OF CONSTRUCTION.—Nothing in this section shall be construed to prohibit the Corporation and a secondary user from entering into a covered leasing agreement pursuant to section 208(a)(2)(B). Nothing in this section shall be construed to limit the Corporation from collecting lease fees related to network equipment and infrastructure pursuant to section 208(a)(3).

SEC. 214. PROVISION OF TECHNICAL ASSISTANCE.

The Commission may provide technical assistance to the Corporation and may take any action necessary to assist the Corporation in effectuating its duties and responsibilities under this subtitle.

Subtitle B—Public Safety Commitments

SEC. 221. STATE AND LOCAL IMPLEMENTATION FUND.

(a) ESTABLISHMENT.—There is established in the Treasury of the United States a fund to be known as the "State and Local Implementation Fund".

(b) PURPOSE.—The Assistant Secretary shall establish and administer the grant program under section 222 using the funds deposited in the State and Local Implementation Fund.

(c) CREDITING OF RECEIPTS.—There shall be deposited into or credited to the State and Local Implementation Fund—

(1) any amounts specified in section 401; and

(2) any amounts borrowed by the Assistant Secretary under subsection (d).

(d) BORROWING AUTHORITY.—

(1) IN GENERAL.—The Assistant Secretary may borrow from the general fund of the Treasury beginning on October 1, 2011, such sums as may be nec-

essary, but not to exceed $250,000,000, to implement section 222.

(2) REIMBURSEMENT.—The Assistant Secretary shall reimburse the general fund of the Treasury, without interest, for any amounts borrowed under subparagraph (A) as funds are deposited into the State and Local Implementation Fund.

SEC. 222. STATE AND LOCAL IMPLEMENTATION.

(a) ESTABLISHMENT OF STATE AND LOCAL IMPLEMENTATION GRANT PROGRAM.—The Assistant Secretary, in consultation with the Corporation, shall take such action as is necessary to establish a grant program to make grants to States to assist State, regional, tribal, and local jurisdictions to identify, plan, and implement the most efficient and effective way for such jurisdictions to utilize and integrate the infrastructure, equipment, and other architecture associated with the nationwide public safety interoperable broadband network established under subtitle A to satisfy the wireless communications and data services needs of that jurisdiction, including with regards to coverage, siting, and other needs.

(b) MATCHING REQUIREMENTS; FEDERAL SHARE.—

(1) IN GENERAL.—The Federal share of the cost of any activity carried out using a grant under this section may not exceed 80 percent of the eligible costs

of carrying out that activity, as determined by the Assistant Secretary, in consultation with the Corporation.

(2) WAIVER.—The Assistant Secretary may waive, in whole or in part, the requirements of paragraph (1) for good cause shown if the Assistant Secretary determines that such a waiver is in the public interest.

(c) PROGRAMMATIC REQUIREMENTS.—Not later than 6 months after the establishment of the bylaws of the Corporation pursuant to section 206, the Assistant Secretary, in consultation with the Corporation, shall establish requirements relating to the grant program to be carried out under this section, including the following:

(1) Defining eligible costs for purposes of subsection (b)(1).

(2) Determining the scope of eligible activities for grant funding under this section.

(3) Prioritizing grants for activities that ensure coverage in rural as well as urban areas.

(d) CERTIFICATION AND DESIGNATION OF OFFICER OR GOVERNMENTAL BODY.—In carrying out the grant program established under this section, the Assistant Secretary shall require each State to certify in its application for grant funds that the State has designated a single officer

or governmental body to serve as the coordinator of implementation of the grant funds.

SEC. 223. PUBLIC SAFETY WIRELESS COMMUNICATIONS RESEARCH AND DEVELOPMENT.

(a) NIST DIRECTED RESEARCH AND DEVELOPMENT PROGRAM.—From amounts made available from the Public Safety Trust Fund established under section 401, the Director of NIST, in consultation with the Commission, the Secretary of Homeland Security, and the National Institute of Justice of the Department of Justice, as appropriate, shall conduct research and assist with the development of standards, technologies, and applications to advance wireless public safety communications.

(b) REQUIRED ACTIVITIES.—In carrying out the requirement under subsection (a), the Director of NIST, in consultation with the Corporation and the public safety advisory committee established under section 204(b)(1), shall—

(1) document public safety wireless communications technical requirements;

(2) accelerate the development of the capability for communications between currently deployed public safety narrowband systems and the nationwide public safety interoperable broadband network to be established under this title;

(3) establish a research plan, and direct research, that addresses the wireless communications needs of public safety entities beyond what can be provided by the current generation of broadband technology;

(4) accelerate the development of mission critical voice, including device-to-device "talkaround" capability over broadband networks, public safety prioritization, authentication capabilities, and standard application programing interfaces for the nationwide public safety interoperable broadband network to be established under this title, if necessary and practical;

(5) accelerate the development of communications technology and equipment that can facilitate the eventual migration of public safety narrowband communications to the nationwide public safety interoperable broadband network to be established under this title; and

(6) convene working groups of relevant government and commercial parties to achieve the requirements in paragraphs (1) through (5).

SEC. 224. ADVANCED INFORMATION AND COMMUNICATIONS TECHNOLOGY RESEARCH.

(a) TELECOMMUNICATIONS INNOVATION ACCELERATION.—

(1) IN GENERAL.—In order to accelerate the pace of innovation with respect to advanced telecommunications capability (as such term is defined in section 706(c)(1) of the Telecommunications Act of 1996 (47 U.S.C. 1302), the Director of NIST and the Director of the National Science Foundation shall expand existing programs to support and promote innovation in the United States through transformative telecommunications research.

(2) COMPETITIONS.—The Director of NIST and the Director of the National Science Foundation shall, on an annual basis, jointly solicit proposals to address areas of national need for transformative telecommunications research, as such areas are identified by each of the Directors.

(3) TRANSFORMATIVE TELECOMMUNICATIONS RESEARCH DEFINED.—In this section, the term "transformative telecommunications research" means basic research with respect to telecommunications, as that term is defined in section 3(43) of the Communications Act of 1934 (47 U.S.C. 153(43)) that involves ideas, discoveries, or tools that —

(A) radically change understanding of an important existing scientific or engineering concept or educational practice; or

(B) leads to the creation of a new paradigm or field of science, engineering, or education related to telecommunications.

(b) ADVANCED COMMUNICATIONS SERVICES FOR ALL AMERICANS.—The Director of NIST shall continue to support research and support standards development in advanced information and communications technologies focused on enhancing or facilitating the availability and affordability of advanced communications services to all Americans, in order to implement the Institute's responsibilities under section 2(c)(12) of the National Institute of Standards and Technology Act (15 U.S.C. 272(c)(12)). The Director of NIST shall support intramural research and cooperative research with institutions of higher education (as defined in section 101(a) of the Higher Education Act of 1965 (20 U.S.C. 1001(a))) and industry.

(c) EMERGING WIRELESS TECHNOLOGY RESEARCH.—

(1) IN GENERAL.—From amounts made available from the Public Safety Trust Fund established under section 401, the Director of the National Science Foundation shall expand existing grant programs to include transformative telecommunications research relevant to emerging wireless technologies that may enhance advanced communications services or make such services more affordable for consumers.

Areas of research to be supported through these grants may include—

(A) opportunistic spectrum sharing;

(B) wireless cyberphysical systems;

(C) more efficient use of the wireless spectrum;

(D) dynamic spectrum access, including cognitive radio technologies;

(E) interference mitigation;

(F) emerging user interface and sensing technologies;

(G) wireless ad hoc networks;

(H) network resiliency and cybersecurity;

(I) communications interoperability, particularly between heterogeneous network technologies;

(J) pervasive information technology;

(K) nanoelectronics for communications applications;

(L) low-power communications electronics;

(M) networking protocols and architectures; and

(N) such other related areas as the Director finds appropriate.

(2) APPLICATIONS.—The Director of the National Science Foundation shall establish criteria for the award of grants under paragraph (1). Grants awarded under paragraph (1) shall be awarded on a merit-reviewed competitive basis. The Director of the National Science Foundation shall give priority to grants that offer the potential for transformative breakthroughs.

(3) LIMITATION ON USE.—Not more than 5 percent of any amounts made available in a fiscal year from the Public Safety Trust Fund established under section 401 may be used by the Director of the National Science Foundation to cover the administrative expenses incurred in carrying out this subsection.

(d) DARPA RESEARCH.—

(1) IN GENERAL.—From amounts made available from the Public Safety Trust Fund established under section 401, the Defense Advanced Research Projects Agency (referred to in this subsection as "DARPA") shall conduct wireless communications research to develop more secure, reliable, and flexible radio-frequency systems for Federal wireless users. Areas of research to be supported by this subsection include, but are not limited to—

(A) technologies to increase wireless data transmission speeds to enable the next generation of Federal networks;

(B) spectrum sharing and interference mitigation techniques to enable more efficient uses of wireless spectrum;

(C) technologies to allow and foster the reallocation of spectrum, if appropriate, for non-Federal use; and

(D) research that fosters the conversion of the Department of Defense's wireless communications systems, and those of other Federal users, to more advanced or more efficient systems.

(2) COOPERATION.—In carrying out this subsection, DARPA shall collaborate where appropriate with NTIA, NIST, NSF, and other interested Federal agencies.

(3) LIMITATION ON USE.—Not more than 5 percent of any amounts made available in a fiscal year from the Public Safety Trust Fund established under section 401 may be used by DARPA to cover the administrative expenses incurred in carrying out this subsection.

(4) OMB REVIEW.—Amounts appropriated to DARPA under this subsection shall be available upon

approval by the Director of the Office of Management and Budget of an implementation plan that has been developed and submitted to the Director by the head of DARPA.

TITLE III—SPECTRUM AUCTION AUTHORITY

SEC. 301. EXTENSION OF AUCTION AUTHORITY.

Section 309(j)(11) of the Communications Act of 1934 (47 U.S.C. 309(j)(11)) is amended by striking "2012" and inserting "2021".

SEC. 302. AUCTION OF SPECTRUM.

(a) IDENTIFICATION OF SPECTRUM.—Not later than 1 year after the date of enactment of this Act, the Assistant Secretary shall identify and make available for immediate reallocation, at a minimum, 15 megahertz of contiguous spectrum at frequencies located between 1675 megahertz and 1710 megahertz, inclusive, minus the geographic exclusion zones, or any amendment thereof, identified in NTIA's October 2010 report entitled "An Assessment of Near-Term Viability of Accommodating Wireless Broadband Systems in 1675–1710 MHz, 1755–1780 MHz, 3500–3650 MHz, and 4200–4220 MHz, 4380–4400 MHz Bands".

(b) AUCTION.—Not later than January 31, 2014, the Commission shall conduct the auctions of the following licenses, by commencing the bidding for:

(1) The spectrum between the frequencies of 1915 megahertz and 1920 megahertz, inclusive.

(2) The spectrum between the frequencies of 1995 megahertz and 2000 megahertz, inclusive.

(3) The spectrum between the frequencies of 2020 megahertz and 2025 megahertz, inclusive.

(4) The spectrum between the frequencies of 2155 megahertz and 2175 megahertz, inclusive.

(5) The spectrum between the frequencies of 2175 megahertz and 2180 megahertz, inclusive.

(6) The spectrum between the frequencies of 1755 megahertz and 1850 megahertz, inclusive.

(7) The spectrum identified pursuant to subsection (a).

(c) AUCTION ORGANIZATION.—The Commission may, if technically feasible and consistent with the public interest, combine the spectrum identified in paragraphs (4), (5), and the portion of paragraph (6) between the frequencies of 1755 megahertz and 1780 megahertz, inclusive, of subsection (b) in an auction of licenses for paired spectrum blocks.

(d) FURTHER REALLOCATION OF CERTAIN OTHER SPECTRUM.—

(1) COVERED SPECTRUM.—For purposes of this subsection, the term "covered spectrum" means the

portion of the electromagnetic spectrum between the frequencies of 3550 to 3650 megahertz, inclusive, minus the geographic exclusion zones, or any amendment thereof, identified in NTIA's October 2010 report entitled "An Assessment of Near-Term Viability of Accommodating Wireless Broadband Systems in 1675–1710 MHz, 1755–1780 MHz, 3550–3650 MHz, and 4200–4220 MHz, 4380–4400 MHz Bands".

(2) IN GENERAL.—Consistent with requirements of section 309(j) of the Communications Act of 1934, the Commission shall reallocate covered spectrum for assignment by competitive bidding unless the President of the United States determines that—

(A) such spectrum cannot be reallocated due to the need to protect incumbent Federal systems from interference; or

(B) allocation of other spectrum—

(i) better serves the public interest, convenience, and necessity; and

(ii) can reasonably be expected to produce receipts comparable to what the covered spectrum might auction for without the geographic exclusion zones.

(3) ACTIONS REQUIRED IF COVERED SPECTRUM CANNOT BE REALLOCATED.—

(A) In general.—If the President makes a determination under paragraph (2) that the covered spectrum cannot be reallocated, then the President shall, within 1 year after the date of such determination—

(i) identify alternative bands of frequencies totaling more than 20 megahertz and no more than 100 megahertz of spectrum used primarily by Federal agencies that satisfy the requirements of clauses (i) and (ii) of paragraph (2)(B);

(ii) report to the appropriate committees of Congress and the Commission an identification of such alternative spectrum for assignment by competitive bidding; and

(iii) make such alternative spectrum for assignment immediately available for reallocation.

(B) Auction.—If the President makes a determination under paragraph (2) that the covered spectrum cannot be reallocated, the Commission shall commence the bidding of the alternative spectrum identified pursuant to subparagraph (A) within 3 years of the date of enactment of this Act.

(4) ACTIONS REQUIRED IF COVERED SPECTRUM CAN BE REALLOCATED.—If the President does not make a determination under paragraph (1) that the covered spectrum cannot be reallocated, the Commission shall commence the competitive bidding for the covered spectrum within 3 years of the date of enactment of this Act.

(e) PROCEEDS.—Notwithstanding section 309(j)(8)(A) of the Communications Act of 1934, and except as provided in subparagraphs (B), (C), and (D) of such section 309(j)(8), all proceeds (including deposits and up front payments from successful bidders) from the auctions to be carried out pursuant to subsections (b) and (d) shall be deposited with the Public Safety Trust Fund established under section 401.

(f) AMENDMENTS TO DESIGN REQUIREMENTS RELATED TO COMPETITIVE BIDDING.—Section 309(j) of the Communications Act of 1934 (47 U.S.C. 309(j)) is amended—

(1) in paragraph (3)—

(A) in subparagraph (E)(ii), by striking "; and" and inserting a semicolon;

(B) in subparagraph (F), by striking the period at the end and inserting a semicolon; and

(C) by adding at the end the following:

"(G) ensuring that there is an adequate opportunity for applicants to obtain licenses covering both large and small geographic areas, as such areas are determined by the Commission."; and

(2) by amending clause (i) of the second sentence of paragraph (8)(C) to read as follows:

"(i) the deposits—

"(I) of successful bidders of any auction conducted pursuant to subparagraph (F) or to section 302 of the Public Safety Spectrum and Wireless Innovation Act shall be paid to the Public Safety Trust Fund established under section 401 of such Act; and

"(II) of successful bidders of any other auction shall be paid to the Treasury;".

SEC. 303. INCENTIVE AUCTION AUTHORITY.

(a) IN GENERAL.—Paragraph (8) of section 309(j) of the Communications Act of 1934 (47 U.S.C. 309(j)) is amended—

(1) in subparagraph (A), by striking "(B), (D), and (E)," and inserting "(B), (D), (E), and (F),"; and

(2) by adding at the end the following:

"(F) INCENTIVE AUCTION AUTHORITY.—

"(i) AUTHORITY.—Notwithstanding any other provision of law, if the Commission determines that it is consistent with the public interest in utilization of the spectrum for a licensee to relinquish voluntarily some or all of its licensed spectrum usage rights in order to permit the assignment of new initial licenses through a competitive bidding process subject to new service rules, or the designation of new spectrum for unlicensed use, the Commission may disburse to that licensee a portion of any auction proceeds that the Commission determines, in its discretion, are attributable to the licensee's relinquished spectrum usage rights, provided that television broadcast stations required to be carried pursuant to sections 338, 614, or 615 that voluntarily elect to share a channel shall retain the rights to carriage set forth in such sections and the rules of the Commission, as such rights apply to such station at its shared location.

"(ii) PROHIBITION.—

"(I) IN GENERAL.—*The Commission may not reclaim spectrum licensed on a primary basis to a television broadcast station, directly or indirectly, on an involuntary basis for purposes of providing spectrum to carry out an incentive auction under this subparagraph.*

"(II) EXCEPTION.—*The Commission may reclaim spectrum licensed to a television broadcast station licensee for the purposes of providing spectrum to carry out an incentive auction under this subparagraph, only if the Commission assigns an identical amount of contiguous spectrum, located between channels 14 and 50, in the same geographic market, if the spectrum was reclaimed from between channels 14 and 51, or located between channels 2 and 13, inclusive, in the same geographic market, to the television broadcast station licensee if the spectrum was reclaimed from between channels 2 and 13, provided that—*

"(aa) the Commission may not involuntarily co-locate multiple television broadcast station licensees on the same channel; and

"(bb) television broadcast stations required to be carried pursuant to sections 338, 614, or 615 that voluntarily elect to share a channel shall retain the rights to carriage set forth in such sections and the rules of the Commission, as such rights apply to such station at its shared location.

"(III) REPACKING.—When assigning spectrum to television broadcast station licensees pursuant to subclause (II), if the Commission determines that it is in the public interest to modify the spectrum usage rights of any incumbent licensee in order to facilitate the assignment of such new initial licenses subject to new service rules, or the designation of spectrum for an unlicensed use, the Commission may disburse to such licensee a portion of the

auction proceeds for the purpose of relocating to any alternative frequency or location that the Commission may designate, and the Commission shall, to the extent technically feasible and in the public interest, make reasonable efforts to—

"(aa) preserve the amount of population covered by a licensee's signal within the licensee's service area;

"(bb) avoid any involuntary increase in interference to the licensee's signal that may otherwise result from new spectrum assignments;

"(cc) allow licensees assigned to broadcast channels 2 through 6 to relocate to channels in the UHF range, if possible and consistent with the goals of the incentive auction, as determined by the Commission; and

"(dd) allow low power television broadcast licensees assigned

to channels in the UHF range that are impacted by relocation of other licensees pursuant to this subclause to relocate to channels in the VHF range.

"(IV) UNLICENSED SPECTRUM.—With respect to frequency bands between 54 and 72 MHz, 76 and 88 MHz, 174 and 216 MHz, 470 and 698 MHz, 84 MHz shall be assigned via a competitive bidding process. A portion of the proceeds from the competitive bidding of the frequency bands identified in the prior sentence may, if consistent with the public interest, be disbursed to other licensees, for the purpose of ensuring that unlicensed spectrum remains available in these frequency bands, nationwide, and in each local market.

"(iii) TREATMENT OF REVENUES.—Notwithstanding subparagraph (A), and except as provided in subparagraphs (B), (C), and (D), all proceeds (including deposits and up front payments from successful bid-

ders) from the auction of spectrum under this subparagraph shall be deposited with the Public Safety Trust Fund established under section 401 of the Public Safety Spectrum and Wireless Innovation Act.

"(G) ESTABLISHMENT OF INCENTIVE AUCTION RELOCATION FUND.—

"(i) IN GENERAL.—There is established in the Treasury of the United States a fund to be known as the 'Incentive Auction Relocation Fund'.

"(ii) ADMINISTRATION.—The Assistant Secretary shall administer the Incentive Auction Relocation Fund using the amounts deposited pursuant to this section.

"(iii) CREDITING OF RECEIPTS.—There shall be deposited into or credited to the Incentive Auction Relocation Fund any amounts specified in section 401 of the Public Safety Spectrum and Wireless Innovation Act.

"(iv) AVAILABILITY.—Amounts in the Incentive Auction Relocation Fund shall be available to the NTIA for use—

"(I) for a period not to exceed 18 months following the later of—

"(aa) the completion of incentive auction from which such amounts were derived; or

"(bb) the date on which the Commission issues all the new channel assignments pursuant to any repacking required under subparagraph (F)(ii); and

"(II) without further appropriation.

"(v) USE OF FUNDS.—Amounts in the Incentive Auction Relocation Fund may only be used by the NTIA, in consultation with the Commission, to cover—

"(I) the reasonable costs of television broadcast stations that are relocated to a different spectrum channel or geographic location following an incentive auction under subparagraph (F), or that are impacted by such relocations, including to cover the cost of new equipment, installation, and construction; and

"(II) the costs incurred by multichannel video programming distributors for new equipment, installation, and construction related to the carriage of such relocated stations or the carriage of stations that voluntarily elect to share a channel, but retain their existing rights to carriage pursuant to sections 338, 614, and 615.".

(b) INCENTIVE AUCTIONS TO REPURPOSE CERTAIN MOBILE SATELLITE SERVICES SPECTRUM FOR TERRESTRIAL BROADBAND USE.—To the extent that the Commission makes available spectrum licenses on some or all of the frequencies between 2000 and 2020 MHz and 2180 and 2200 MHz for terrestrial broadband use, such licenses shall be assigned pursuant to the authority provided in section 309(j)(8) of the Communications Act of 1934 (47 U.S.C. 309(j)(8)), including, as appropriate, subparagraph (F) of such section.

(c) SENSE OF CONGRESS.—It is the sense of Congress that any spectrum identified for auction under this section should be licensed—

(1) on a flexible use basis to the extent technologically feasible; and

(2) consistent with the public interest, convenience, and necessity.

SEC. 304. EFFICIENT USE OF PUBLIC SAFETY SPECTRUM.

(a) STUDY AND REPORT.—Not later than 180 days after the date of enactment of this Act and not later than every 2 years thereafter, the Commission shall conduct a study and submit a report to the appropriate committees of Congress and to the Corporation on the spectrum used by public safety licensees or for public safety services pursuant to section 337(f) of the Communications Act of 1934 (47 U.S.C. 337).

(b) REQUIREMENTS.—The report required under subsection (a) shall—

(1) inventory the spectrum assigned to public safety use; and

(2) include—

(A) the amount of spectrum allocated to public safety use;

(B) the number of licensees and amount of spectrum assigned to each licensee;

(C) a general description of technologies and systems in each band;

(D) an approximation of network coverage, as appropriate, of major systems (such as an es-

timation of land mobile radio coverage by population) in major metropolitan areas; and

(E) an approximate number of users of major systems, such as the number of first responders using land mobile radio, in major metro areas;

(3) assess if spectrum is adequate to meet the current and future needs for public safety services; and

(4) assess the opportunity for return of any additional spectrum to the Commission for reallocation.

SEC. 305. REPORT ON SATELLITE BROADBAND.

Not later than 2 years after the date of enactment of this Act, the Comptroller General of the United States shall conduct a study and submit to the appropriate committees of Congress a report on the current and future capabilities of fixed and mobile satellite broadband to assist public safety entities during an emergency.

SEC. 306. FEDERAL INFRASTRUCTURE SHARING.

The Administrator of General Services shall establish rules to allow public safety entities licensed or otherwise permitted to use spectrum allocated to the Public Safety Broadband Corporation to have access to those components of Federal infrastructure appropriate for the construction *and maintenance of the nationwide public safety interoperable broadband network to be established under title II.*

SEC. 307. REPORT ON UNLICENSED SPECTRUM.

Not later than 5 years after the date of enactment of this Act, the Commission shall submit to the appropriate committees of Congress a report on—

(1) the status of development of any spectrum designated as unlicensed spectrum by the Commission under this Act; and

(2) the use of any unlicensed spectrum described in paragraph (1).

TITLE IV—PUBLIC SAFETY TRUST FUND

SEC. 401. PUBLIC SAFETY TRUST FUND.

(a) ESTABLISHMENT OF PUBLIC SAFETY TRUST FUND.—

(1) IN GENERAL.—There is established in the Treasury of the United States a trust fund to be known as the "Public Safety Trust Fund".

(2) CREDITING OF RECEIPTS.—

(A) IN GENERAL.—There shall be deposited into or credited to the Public Safety Trust Fund the proceeds from the auction of spectrum carried out pursuant to—

(i) section 302 of this Act; and

(ii) section 309(j)(8)(F) of the Communications Act of 1934, as added by section 303 of this Act.

(B) AVAILABILITY.—Amounts deposited into or credited to the Public Safety Trust Fund in accordance with subparagraph (A) shall remain available until the end of fiscal year 2021. Upon the expiration of the period described in the prior sentence such amounts shall be deposited in the General Fund of the Treasury, where such amounts shall be dedicated for the sole purpose of deficit reduction.

(b) USE OF FUND.—Amounts deposited in the Public Safety Trust Fund shall be used in the following manner:

(1) PAYMENT OF AUCTION INCENTIVE.—

(A) REQUIRED DISBURSALS.—Amounts in the Public Safety Trust Fund shall be used to make any required disbursal of payments to licensees required pursuant to—

(i) clause (i) and subclause (IV) of clause (ii) of section 309(j)(8)(F) of the Communications Act of 1934; and

(ii) section 303(b) of this Act.

(B) NOTIFICATION TO CONGRESS.—

(i) IN GENERAL.—At least 3 months in advance of any incentive auction conducted pursuant to subparagraph (F) of section 309(j)(8) of the Communications Act of 1934, the Chairman of the Commission, in consultation with the Director of the Office of Management and Budget, shall notify the appropriate committees of Congress—

(I) of the methodology for calculating the disbursal of payments to certain licensees required pursuant to clause (i) and subclauses (III) and (IV) of clause of (ii) of such section; and

(II) thot such methodology considers the value of the spectrum voluntarily relinquished in its current use and the timeliness with which the licensee will clear its use of such spectrum.

(ii) DEFINITION.—In this clause, the term "appropriate committees of Congress" means—

(I) the Committee on Commerce, Science, and Transportation of the Senate;

(II) the Committee on Appropriations of the Senate;

(III) the Committee on Energy and Commerce of the House of Representatives; and

(IV) the Committee on Appropriations of the House of Representatives.

(2) INCENTIVE AUCTION RELOCATION FUND.—Not less than 5 percent of the amounts in the Public Safety Trust Fund but not more than $1,000,000,000 shall be deposited in the Incentive Auction Relocation Fund established under section 309(j)(8)(G) of the Communications Act of 1934.

(3) STATE AND LOCAL IMPLEMENTATION FUND.—$250,000,000 shall be deposited in the State and Local Implementation Fund established under section 221.

(4) PUBLIC SAFETY BROADBAND CORPORATION.—$11,750,000,000 shall deposited with the Public Safety Broadband Corporation established under section 202, of which pursuant to its responsibilities and duties set forth under section 206 to deploy and

operate a nationwide public safety interoperable broadband network—

(A) not less than $10,500,000,000 shall be made available for any Radio Access Network build out; and

(B) not less than $1,250,000,000 shall be made available to develop an Evolved Packet Core.

(5) PUBLIC SAFETY RESEARCH AND DEVELOPMENT.—$100,000,000 per year for each of the fiscal years 2012 through 2016 shall be made available for use by the Director of NIST to carry out the research program established under section 223.

(6) ADVANCED INFORMATION AND TECHNOLOGY RESEARCH.—$200,000,000 per year for each of the fiscal years 2012 through 2016 shall be made available to carry out the programs established under section 224, of which—

(A) $130,000,000 per year shall be made available to the Director of the National Science Foundation to carry out the grant program established under section 224(c); and

(B) $70,000,000 per year shall be made available to DARPA to carry out the research program established under section 224(d).

(7) DEFICIT REDUCTION.—Any amounts remaining after the deduction of the amounts required under paragraphs (1) through (6) shall be deposited in the General Fund of the Treasury, where such amounts shall be dedicated for the sole purpose of deficit reduction.

(c) INVESTMENT.—Amounts in the Public Safety Trust Fund shall be invested in accordance with section 9702 of title 31, United States Code, and any interest on, and proceeds from, any such investment shall be credited to, and become a part of, the Fund.

TITLE V—SPECTRUM POLICY

Subtitle A—Inventory and Planning

SEC. 501. RADIO SPECTRUM INVENTORY.

(a) SPECTRUM INVENTORY.—Part I of title III of the Communications Act of 1934 (47 U.S.C. 301 et seq.) is amended by adding at the end the following:

"SEC. 342. SPECTRUM INVENTORY.

"(a) RADIO SPECTRUM INVENTORY.—Not later than 180 days after the date of enactment of the Public Safety Spectrum and Wireless Innovation Act, and biennially thereafter, the Commission, in consultation with the NTIA and the Office of Science and Technology Policy, shall carry out the following activities:

"(1) REPORT.—Prepare a report that includes an inventory of each radio spectrum band, from 300 MHz to 3.5 GHz, at a minimum, managed by each such agency. Except as provided in subsection (b), the report shall include—

"(A) the licensee or government user authorized in the band;

"(B) the total spectrum authorized for each licensee or government user (in percentage terms and in sum) in the band;

"(C) the approximate number of transmitters, end-user terminals, or receivers, excluding unintended radiators, that have been deployed or authorized, for each licensee or government user, in the band; and

"(D) if such information is available—

"(i) the type of transmitters, end-user terminals, or receivers, excluding unintended radiators, operating in the band and whether they are space-, air-, or ground-based;

"(ii) the type of transmitters, end-user terminals, or receivers, excluding unintended radiators, authorized to operate in

the band and whether they are space-, air-, or ground-based;

"(iii) contour maps or other information that illustrate the coverage area, receiver performance, and other parameters relevant to an assessment of the availability of spectrum in each band;

"(iv) the approximate geolocation of base stations or fixed transmitters;

"(v) the approximate extent of use, by geography, of each band of frequencies, such as the amount and percentage of time of use, number of end-users, or other measures as appropriate to the particular band;

"(vi) the activities, capabilities, functions, or missions supported by the transmitters, end-user terminals, or receivers; and

"(vii) the types of unlicensed devices authorized to operate in the band.

"(2) PUBLIC ACCESS.—Create a centralized portal or website utilizing data from the Commission and the NTIA to make a centralized inventory of the bands of each agency available to the public via an Internet-accessible website.

"(3) UPDATES.—Make all reasonable efforts to maintain and update the information required under paragraph (2) no less frequently than quarterly to reflect, at a minimum, any transfer or auction of licenses or change in allocation, assignment, or authorization.

"(4) FCC TO BEAR COSTS.—Notwithstanding any other provision of law, all costs incurred by the Commission and the NTIA in establishing and maintaining the centralized inventory and the centralized portal or website shall be borne exclusively by the Commission.

"(5) PAPERWORK REDUCTION ACT EXEMPTION.—Any forms prescribed by the Commission under this section, and any information-gathering activities of the Commission under this section, shall not be subject to the provisions of sections 3507 or 3512 of title 44, United States Code (44 U.S.C. 3507, 3512).

"(b) NATIONAL SECURITY; CLASSIFIED INFORMATION.—

"(1) IN GENERAL.—If the head of a Federal agency determines that disclosure of information required by subsection (a) would be harmful to the national security of the United States, the agency shall—

"(A) notify the NTIA of its determination; and

"(B) provide to the NTIA—

"(i) the other publicly releasable information required by subsection (a);

"(ii) to the maximum extent practicable, a summary description of the information with respect to which the determination was made; and

"(iii) an annex containing the information with respect to which the determination was made.

"(2) CLASSIFIED INFORMATION.—If the head of a Federal agency determines that any information required by subsection (a) is classified in accordance with Executive Order 13526 of December 29, 2009, or any successor Executive Order establishing or modifying the uniform system for classifying, safeguarding, and declassifying national security information, the agency shall—

"(A) notify the NTIA of its determination; and

"(B) provide to the NTIA—

"(i) the information required by subsection (a)(1) that is not classified;

"(ii) to the maximum extent practicable, a summary description of the information that is classified; and

"(iii) an annex containing the information that is classified.

"(3) ANNEX RESTRICTION.—The NTIA shall make an annex described in paragraph (1)(B)(iii) or (2)(B)(iii) available to the Commission. Neither the NTIA nor the Commission may make any such annex available to the public pursuant to subsection (a)(2) or to any unauthorized person through any other means.

"(e) PUBLIC SAFETY NONDISCLOSURE.—

"(1) IN GENERAL.—If a licensee of non-Federal spectrum determines that public disclosure of certain information held by that licensee and required to be included in the report under subsection (a) would reveal information for which public disclosure would be detrimental to public safety, or that the licensee is otherwise prohibited by law from disclosing, the licensee may petition the Commission for a partial or total exemption from inclusion on the centralized portal or website under subsection (a)(2) and in the reports required under subsection (d).

"(2) BURDEN.—A licensee seeking an exemption under this subsection bears the burden of justifying the exemption and shall provide clear and convincing evidence to support the requested exemption.

"(3) INFORMATION REQUIRED.—If the Commission grants an exemption under this subsection, the licensee shall provide to the Commission—

"(A) the publicly releasable information required by subsection (a)(1) for the inventory;

"(B) to the maximum extent practicable, a summary description, suitable for public release, of the information for which public disclosure would be detrimental to public safety or that the licensee is prohibited by law from disclosing; and

"(C) an annex, under appropriate cover, containing the information that the Commission has determined should be withheld from public disclosure.

"(d) INFORMING THE CONGRESS.—

"(1) IN GENERAL.—Except as provided in paragraph (3), the NTIA and the Commission shall submit each report required by subsection (a)(1) to the appropriate committees of Congress.

"(2) NONDISCLOSURE OF ANNEXES.—Each such report shall be submitted in unclassified form, but

may include 1 or more annexes as provided for by subsections (b)(1)(B)(iii), (b)(2)(B)(iii), and (c)(3)(C). No Congressional committee may make any such annex available to the public or to any unauthorized person.

"(3) CLASSIFIED ANNEXES.—If a report includes a classified annex as provided for by subsection (b)(2)(B)(iii), the NTIA and the Commission shall—

"(A) submit the classified annex only to the appropriate committees of Congress with primary oversight jurisdiction for the user agencies or licensees concerned; and

"(B) provide notice of the submission to the other appropriate committees of Congress.

"(e) DEFINITIONS.—In this section:

"(1) APPROPRIATE COMMITTEES OF CONGRESS.—The term 'appropriate committees of Congress' means the Committee on Commerce, Science, and Transportation of the Senate, the Committee on Energy and Commerce of the House of Representatives, and any other congressional committee with primary oversight jurisdiction for the user agencies or licensees concerned.

"(2) NTIA.—The term 'NTIA' means the National Telecommunications and Information Administration.".

(b) PROGRESS REPORT.—Within 180 days after the date of enactment of this title, the Commission and the NTIA shall provide an update as to the status of the inventory and report required by section 342(a) of the Communications Act of 1934, as added by subsection (a), to the appropriate committees of Congress.

SEC. 502. FEDERAL SPECTRUM PLANNING.

(a) REVIEW OF EVALUATION PROCESS.—Not later than 6 months after the date of enactment of this title, the Comptroller General of the United States shall—

(1) conduct a review of the processes that Federal entities utilize to evaluate their spectrum needs and manage their spectrum resources;

(2) make recommendations on how to improve such processes; and

(3) submit a written report to the appropriate committees of Congress on the review, analysis, and recommendations made pursuant to paragraphs (1) and (2).

(b) REVISION OF EVALUATION PROCESS.—

(1) IN GENERAL.—Not later than 1 year after the date of enactment of this title, each Federal entity

shall establish, update, or revise the process used by such entity to evaluate their proposed spectrum needs, taking into account any applicable recommendations made in the report required under subsection (a).

(2) REQUIRED INCLUSIONS.—

(A) ANALYSIS OF OPTIONS.—Each process described under paragraph (1), whether newly established or otherwise revised, shall include an analysis and assessment of—

(i) the options available to a Federal entity to obtain associated communications services that are the most spectrum-efficient; and

(ii) the effective alternatives available to such entity that will permit the entity to continue to satisfy the mission requirements of the entity.

(B) ANALYSIS SUBMITTED TO NTIA.—The analysis and assessment carried out pursuant to subparagraph (A) shall be submitted by the Federal entity to the NTIA at the same time that the entity seeks certification or recertification, if applicable, of spectrum support from the NTIA pursuant to the requirements of the National Telecommunications and Information Adminis-

tration Organization Act and OMB Circular A–11.

(c) SPECTRUM PLANS OF FEDERAL ENTITIES.—

(1) IN GENERAL.—Not later than 1 year after the date of enactment of this title, and every 2 years thereafter, each Federal entity shall provide an entity-specific strategic spectrum plan to the Assistant Secretary and the Director of the Office of Management and Budget.

(2) REQUIRED INCLUSIONS.—Each strategic spectrum plan submitted pursuant to paragraph (1) shall include—

(A) the spectrum requirements of the entity;

(B) the planned uses of new technologies or expanded services requiring spectrum over a period of time agreed to by the entity;

(C) suggested spectrum-efficient approaches to meeting the spectrum requirements identified under subparagraph (A); and

(D) progress reports on what the entity is doing to improve its spectrum management.

(d) NATIONAL SECURITY; CLASSIFIED INFORMATION.—

(1) IN GENERAL.—If the head of a Federal entity determines that disclosure of information required by

subsection (c) would be harmful to the national security of the United States, the entity shall—

(A) notify the NTIA of its determination; and

(B) provide to the NTIA—

(i) the other publicly releasable information required by subsection (c);

(ii) to the maximum extent practicable, a summary description of the information with respect to which the determination was made; and

(iii) an annex containing the information with respect to which the determination was made.

(2) CLASSIFIED INFORMATION.—If the head of a Federal entity determines that any information required by subsection (c) is classified in accordance with Executive Order 13526 of December 29, 2009, or any successor Executive Order establishing or modifying the uniform system for classifying, safeguarding, and declassifying national security information, the entity shall—

(A) notify the NTIA of its determination; and

(B) provide to the NTIA—

(i) the information required by subsection (c) that is not classified;

(ii) to the maximum extent practicable, a summary description of the information that is classified; and

(iii) an annex containing the information that is classified.

(3) ANNEX RESTRICTION.—The NTIA shall make an annex described in paragraph (1)(B)(iii) or (2)(B)(iii) available to the Secretary of Commerce and the Director of the Office of Management and Budget. Neither the NTIA, the Secretary of Commerce, nor the Director of the Office of Management and Budget may make any such annex available to the public or to any unauthorized person through any other means.

(e) FEDERAL STRATEGIC SPECTRUM PLAN.—

(1) DEVELOPMENT AND SUBMISSION.—

(A) IN GENERAL.—Not later than 6 months after the receipt of the initial entity-specific strategic spectrum plans required under subsection (c), the Secretary of Commerce shall develop a Federal Strategic Spectrum Plan, in coordination with the Assistant Secretary and the Director of the Office of Management and Budget.

(B) SUBMISSION TO CONGRESS.—Consistent with the requirements set forth in subsection (d)(3), the Secretary of Commerce shall submit the Federal Strategic Spectrum Plan developed under subparagraph (A) to the appropriate committees of Congress.

(C) NONDISCLOSURE OF ANNEXES.—The Federal Strategic Spectrum Plan required to be submitted under subparagraph (B) shall be submitted in unclassified form, but shall include, if appropriate, 1 or more annexes as provided for by subsections (d)(1)(B)(iii) and (d)(2)(B)(iii). No Congressional committee may make any such annex available to the public or to any unauthorized person.

(D) CLASSIFIED ANNEXES.—If the Federal Strategic Spectrum Plan includes a classified annex as provided for by subsection (d)(2)(B)(iii), the Secretary of Commerce shall—

(i) submit the classified annex only to the appropriate committees of Congress with primary oversight jurisdiction for the user entities or licensees concerned; and

(ii) provide notice of the submission to the other appropriate committees of Congress.

(E) DEFINITION.—In this subsection, the term "appropriate committees of Congress" means the Committee on Commerce, Science, and Transportation of the Senate, the Committee on Energy and Commerce of the House of Representatives, and any other congressional committee with primary oversight jurisdiction for the user entity or licensees concerned.

(2) INCORPORATION OF ENTITY PLANS.—The Federal Strategic Spectrum Plan developed under paragraph (1) shall incorporate, consistent with the requirements of subsection (d), the initial entity-specific strategic spectrum plans submitted under subsection (c).

(3) REQUIRED INCLUSIONS.—The Federal Strategic Spectrum Plan developed under paragraph (1) shall include—

(A) information on how spectrum assigned and used by Federal entities is being used;

(B) opportunities to increase efficient use of infrastructure and spectrum assigned and used by Federal entities;

(C) an assessment of the future spectrum needs of the Federal Government; and

(D) plans to incorporate such needs in the NTIA's frequency assignment, equipment certification, and review processes.

(4) UPDATES.—The Secretary of Commerce shall revise and update the Federal Strategic Spectrum Plan developed under paragraph (1) accordingly pursuant to the biennial submission of the entity-specific strategic spectrum plans submitted under subsection (c).

(f) NATIONAL STRATEGIC SPECTRUM PLAN.—

(1) IN GENERAL.—Not later than 2 years after the date of enactment of this title, the NTIA and the Commission, in consultation with other Federal, State, local, and tribal governments and commercial spectrum interests, shall develop a quadrennial National Strategic Spectrum Plan.

(2) REQUIRED INCLUSION.—The National Strategic Spectrum Plan shall include the following:

(A) The Federal Strategic Spectrum Plan developed under subsection (e).

(B) Long-range spectrum planning of both commercial, State and local government, and Federal Government users.

(C) New technologies or expanded services requiring spectrum.

(D) The nature and characteristics of the new radio communication systems required and the nature and characteristics of the spectrum required.

(E) Efficient approaches to meeting the future spectrum requirements of all users, including—

(i) requiring certain standards-based technologies that improve spectrum efficiencies;

(ii) spectrum sharing and reuse opportunities;

(iii) possible reallocation; and

(iv) any other approaches that promote efficient use of spectrum.

(F) An evaluation of current auction processes to determine the effectiveness of such processes in—

(i) promoting competition;

(ii) improving spectrum use efficiency; and

(iii) maximizing the full economic value to customers, industry, and the taxpayer of the spectrum.

Subtitle B—Markets

SEC. 511. PROMOTING SECONDARY SPECTRUM MARKETS.

(a) IN GENERAL.—Not later than 18 months after the date of enactment of this title, the Commission shall conduct a rulemaking proceeding to determine how to further promote a more robust secondary spectrum market.

(b) CONSIDERATION.—In carrying out the rulemaking required under subsection (a), the Commission shall consider the feasability and value of establishing a national database to collect and disseminate information on secondary spectrum market opportunities.

SEC. 512. UNLICENSED USE IN 5 GHZ.

(a) MODIFICATION OF REGULATIONS.—

(1) IN GENERAL.—Not later than 1 year after the date of enactment of this title, the Commission shall modify part 15 of title 47, Code of Federal Regulations, to allow unlicensed devices intended and marketed for indoor use to operate in the 5350–5470 MHz band.

(2) CONCERNS AND CONSIDERATIONS.—In carrying out the modification requirement set forth under paragraph (1), the Commission shall allow the

unlicensed devices described in paragraph (1) to operate in the 5350–5470 MHz band, on an indoor basis only, if it—

(A) finds that technical solutions will protect licensed users, including use of existing, modified, or new spectrum sharing technologies and solutions, such as dynamic frequency selection; and

(B) determines that the primary mission of Federal spectrum users in the 5350–5470 MHz band will not be compromised by the introduction of unlicensed devices in the 5350–5470 MHz band.

(b) NTIA STUDY.—

(1) IN GENERAL.—Not later than 8 months after the date of enactment of this title, and in consultation with the Commission, the NTIA shall conduct and submit a study as provided in paragraph (2) evaluating known and proposed sharing technologies and the risk to Federal users if unlicensed U–NII devices were allowed to operate indoors in the 5350–5470 MHz band.

(2) SUBMITTING STUDY.—The study required by paragraph (1) shall be submitted to the appropriate committees of Congress and the Commission.

SEC. 513. EXPERIMENTAL LICENSES.

Not later than 9 months after the date of enactment of this title, the Commission shall revise part 5 of chapter I of title 47, Code of Federal Regulations, to—

(1) streamline such regulations to promote greater experimentation;

(2) broaden opportunities for market trials;

(3) promote advancements in health care;

(4) establish innovation zones; and

(5) establish a process by which qualified entities, including colleges, universities, public and private companies, and non-profit research organizations, will be permitted to use a broad range of radio frequencies for research and experimentation on a non-interference basis without having to obtain prior authorization from the Commission for the use of specific frequencies.

SEC. 514. REPURPOSING FEDERAL SPECTRUM FOR COMMERCIAL PURPOSES AND FEDERAL SPECTRUM SHARING.

(a) ELIGIBLE FEDERAL ENTITIES.—Section 113(g)(1) of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 923(g)(1)) is amended to read as follows:

"(1) ELIGIBLE FEDERAL ENTITIES.—Any Federal entity that operates a Federal Government sta-

tion authorized to use a band of frequencies specified in paragraph (2) and that incurs relocation costs because of planning for a potential auction of spectrum frequencies, a planned auction of spectrum frequencies, or the reallocation of spectrum frequencies from Federal use to exclusive non-Federal use, or shared Federal and non-Federal use shall receive payment for such costs from the Spectrum Relocation Fund, in accordance with section 118 of this Act. For purposes of this paragraph, Federal power agencies exempted under subsection (c)(4) that choose to relocate from the frequencies identified for reallocation pursuant to subsection (a), are eligible to receive payment under this paragraph.".

(b) ELIGIBLE FREQUENCIES.—Section 113(g)(2)(B) of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 923(g)(2)(B)) is amended to read as follows:

"(B) any other band of frequencies reallocated from Federal use to non-Federal or shared use, whether for licensed or unlicensed use, after January 1, 2003, that is assigned—

"(i) by competitive bidding pursuant to section 309(j) of the Communications Act of 1934 (47 U.S.C. 309(j)); or

"(ii) as a result of an Act of Congress or any other administrative or executive direction.".

(c) DEFINITION OF RELOCATION AND SHARING COSTS.—Section 113(g)(3) of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 923(g)(3)) is amended to read as follows:

"(3) DEFINITION OF RELOCATION AND SHARING COSTS.—For purposes of this subsection, the terms 'relocation costs' and 'sharing costs' mean the costs incurred by a Federal entity to plan for a potential or planned auction or sharing of spectrum frequencies to achieve comparable capability of systems, regardless of whether that capability is achieved by relocating to a new frequency assignment, relocating a Federal Government station to a different geographic location, modifying Federal Government equipment to mitigate interference or use less spectrum, in terms of bandwidth, geography, or time, and thereby permitting spectrum sharing (including sharing among relocated Federal entities and incumbents to make spectrum available for non-Federal use) or relocation, or by utilizing an alternative technology. Comparable capability of systems includes the acquisition of state-of-the art replacement systems intended to meet com-

parable operational scope, which may include incidental increases in functionality, including those necessary to achieve security, reliability, and resiliency. Such costs include—

"(A) the costs of any modification or replacement of equipment, spares, associated ancillary equipment, software, facilities, operating manuals, training costs, or regulations that are attributable to relocation or sharing;

"(B) the costs of all engineering, equipment, software, site acquisition, and construction costs, as well as any legitimate and prudent transaction expense, including term-limited Federal civil servant and contractor staff necessary to carry out the relocation activities of an eligible Federal entity, and reasonable additional costs incurred by the Federal entity that are attributable to relocation or sharing, including increased recurring costs associated with the replacement of facilities;

"(C) the costs of research, engineering studies, economic analyses, or other expenses reasonably incurred in connection with—

"(i) calculating the estimated relocation costs that are provided to the Commis-

sion pursuant to paragraph (4) of this subsection, or in calculating the estimated sharing costs;

"(ii) determining the technical or operational feasibility of relocation to 1 or more potential relocation bands; or

"(iii) planning for or managing a relocation or sharing project (including spectrum coordination with auction winners) or potential relocation or sharing project;

"(D) the one-time costs of any modification of equipment reasonably necessary to accommodate commercial use of shared frequencies or, in the case of frequencies reallocated to exclusive commercial use, prior to the termination of the Federal entity's primary allocation or protected status, when the eligible frequencies as defined in paragraph (2) of this subsection are made available for private sector uses by competitive bidding and a Federal entity retains primary allocation or protected status in those frequencies for a period of time after the completion of the competitive bidding process;

"(E) the costs associated with the accelerated replacement of systems and equipment if

such acceleration is necessary to ensure the timely relocation of systems to a new frequency assignment or the timely accommodation of sharing of Federal frequencies; and

"(F) the costs of the use of commercial systems (including systems not utilising spectrum) to replace Federal systems discontinued or relocated pursuant to this Act, including lease (including lease of land), subscription, and equipment costs over an appropriate period, such as the anticipated life of an equivalent Federal system or other period determined by the Director of the Office of Management and Budget.".

(d) SPECTRUM SHARING.—Section 113(g) of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 923(g)) is amended by adding at the end the following:

"(7) SPECTRUM SHARING.—A Federal entity is permitted to allow access to its frequency assignments by a non-Federal entity upon approval of NTIA, in consultation with the Director of the Office of Management and Budget. Such non-Federal entities shall comply with all applicable rules of the Commission and the NTIA, including any regulations promulgated pursuant to this section. Any remuneration as-

sociated with such access shall be deposited into the Spectrum Relocation Fund established under section 118. A Federal entity that incurs costs as a result of such access is eligible for payment from the Fund for the purposes specified in paragraph (3) of this section. The revenue associated with such access shall be at least 110 percent of the estimated Federal costs.".

(e) SPECTRUM RELOCATION FUND.—Section 118 of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 928) is amended—

(1) in subsection (b), by inserting before the period at the end the following: "and any payments made by non-Federal entities for access to Federal spectrum pursuant to section 113(g)(7) (47 U.S.C. 113(g)(7))";

(2) by amending subsection (c) to read as follows:

"(c) USE OF FUNDS.—

"(1) FUNDS FROM AUCTIONS.—The amounts in the Fund from auctions of eligible frequencies are authorized to be used to pay relocation costs, as such costs are defined in section 113(g)(3), of an eligible Federal entity incurring such costs with respect to relocation from any eligible frequency.

"(2) FUNDS FROM PAYMENTS BY NON-FEDERAL ENTITIES.—The amounts in the Fund from payments by non-Federal entities for access to Federal spectrum are authorized to be used to pay the sharing costs, as such costs are defined in section 113(g)(3), of an eligible Federal entity incurring such costs.

"(3) TRANSFER OF FUNDS.—

"(A) IN GENERAL.—Subject to subparagraph (B), the Director of OMB may transfer at any time (including prior to any auction or contemplated auction, or sharing initiative) such sums as may be available in the Fund to an eligible Federal entity to pay eligible relocation or sharing costs related to pre-auction estimates or research, as such costs are described in section 113(g)(3)(C).

"(B) NOTIFICATION.—No funds may be transferred pursuant to subparagraph (A) unless the notification provided under subsection (d)(2)(B) of this section includes a certification from the Director of OMB that—

"(i) funds transferred before an auction will likely allow for a timely relocation, thereby increasing net expected auction proceeds by an amount equal to or

greater than the time value of the amount of funds transferred; and

"(ii) the auction is intended to occur within 5 years of transfer of funds.

"(C) APPLICABILITY.—

"(i) PRIOR COSTS INCURRED.—The Director of OMB may transfer up to $10,000,000 to eligible Federal entities for eligible relocation or sharing costs related to pre-auction estimates or research, as such costs are described in section 113(g)(3)(C), for costs incurred prior to the date of the enactment of the Public Safety Spectrum and Wireless Innovation Act, but after June 28th, 2010.

"(ii) SUPPLEMENT NOT SUPPLANT.—Any amounts transferred by the Director of OMB pursuant to clause (i) shall be in addition to any amounts that the Director of OMB may transfer after the date of the enactment of the Public Safety Spectrum and Wireless Innovation Act.";

(3) in subsection (d)—

(A) in paragraph (1), by inserting "and sharing" before "costs";

(B) in paragraph (2)(B)—

(i) by inserting "and sharing" before "costs"; and

(ii) by inserting "and sharing" before the period at the end; and

(C) by amending paragraph (3) to read as follows:

"(3) REVERSION OF UNUSED FUNDS.—

"(A) IN GENERAL.—Any amounts in the Fund that are remaining after the payment of the relocation and sharing costs that are payable from the Fund shall revert to and be deposited in the General Fund of the Treasury not later than 8 years after the date of the deposit of such proceeds to the Fund, unless within 60 days in advance of the reversion of such funds, the Director of OMB, in consultation with the Assistant Secretary for Communications and Information, notifies the appropriate committees of Congress that such funds are needed to complete or to implement current or future relocations or sharing initiatives.

"(B) DEFINITION.—In this paragraph, the term 'appropriate committees of Congress' means

"(i) the Committee on Appropriations of the Senate;

"(ii) the Committee on Commerce, Science, and Transportation of the Senate;

"(iii) the Committee on Appropriations of the House of Representatives; and

"(iv) the Committee on Energy and Commerce of the House of Representatives.";

(4) in subsection (e)(2)—

(A) by inserting "and sharing" before "costs";

(B) by inserting "or sharing" before "is complete"; and

(C) by inserting "or sharing" before "in accordance"; and

(5) by adding at the end the following:

"(f) ADDITIONAL PAYMENTS FROM THE FUND.—Notwithstanding subsections (c) through (e), after the date of the enactment of the Public Safety Spectrum and Wireless Innovation Act, and following the credit of any amounts specified in subsection (b), there are hereby appropriated from the Fund and available to the Director of the OMB up to 10 percent of the amounts deposited in the Fund from the auction of licenses for frequencies of spectrum vacated by Federal entities, or up to 10 percent of the amounts de-

posited in the Fund by non-Federal entities for sharing of Federal spectrum. The Director of OMB, in consultation with the Assistant Secretary for Communications and Information, may use such amounts to pay eligible Federal entities for the purpose of encouraging timely access to such spectrum, provided that—

"(1) any such payment by the Director of OMB is based on the market value of the spectrum, the timeliness with which the licensee cleared its use of such spectrum, and the need for such spectrum in order for the Federal entity to conduct its essential missions;

"(2) any such payment by the Director of OMB is used to carry out the purposes specified in subparagraphs (A) through (F) of paragraph (3) of subsection 113(g) to achieve enhanced capability for those systems affected by reallocation of Federal spectrum to commercial use, or by sharing of Federal frequencies with non-Federal entities;

"(3) the amount remaining in the Fund after any such payment by the Director is not less than 10 percent of the winning bids in the relevant auction, or is not less than 10 percent of the payments from non-Federal entities in the relevant sharing agreement; and

"(4) any such payment by the Director shall not be made until 30 days after the Director has notified the Committees on Appropriations and Commerce, Science, and Transportation of the Senate, and the Committees on Appropriations and Energy and Commerce of the House of Representatives.".

(f) COMPETITIVE BIDDING; TREATMENT OF REVENUES.—Subparagraph (D) of section 309(j)(8) of the Communications Act of 1934 (47 U.S.C. 309(j)(8)) is amended by inserting "excluding frequencies identified by the Federal Communications Commission to be auctioned in conjunction with eligible frequencies described in section 113(g)(2)" before "shall be deposited".

(g) PUBLIC DISCLOSURE AND NONDISCLOSURE.—If the head of an executive agency of the Federal Government determines that public disclosure of any information contained in notifications and reports required by sections 113 or 118 of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 923 and 928) would reveal classified national security information or other information for which there is a legal basis for nondisclosure and such public disclosure would be detrimental to national security, homeland security, public safety, or jeopardize law enforcement investigations, the head of the executive agency shall notify the NTIA of that deter-

mination prior to release of such information. In that event, such classified information shall be included in a separate annex, as needed. These annexes shall be provided to the appropriate subcommittee in accordance with appropriate national security stipulations, but shall not be disclosed to the public or provided to any unauthorized person through any other means.

SEC. 515. REPORT ON SPECTRUM SHARING.

(a) IDENTIFICATION OF SPECTRUM; REPORT TO CONGRESS.—Not later than 1 year after the date of enactment of this Act, the NTIA shall conduct a study and submit a report to the appropriate committees of Congress—

(1) that identifies spectrum between 225 MHz and 3700 MHz operated or licensed by a Federal entity that the NTIA, in consultation with the Commission, determines appropriate for sharing with non-government entities or non-Federal government entities, including, after taking into account any spectrum identified by the NTIA in its October 2010 report entitled "An Assessment of the Near-Term Viability of Accommodating Wireless Broadband Systems in the 1675-1710 MHz, 1755-1780 MHz, 3500-3650 MHz, and 4200-4220 MHz, 4380-4400 MHz Bands", the additional 100 MHz most likely to be appropriate for wireless broadband operations; and

(2) on how Federal entities can utilize dynamic spectrum sharing technologies to allow non-government entities or non-Federal government entities to share underutilized spectrum without interference to the primary usage by the Federal Government of that spectrum, including through use of cognitive radio and sensing technologies and database and geolocation approaches.

(b) CONSIDERATIONS.—In carrying out the study and report required under subsection (a), the NTIA should consider—

(1) radio systems that are utilized in fixed or predictable geographic locations;

(2) radio systems that are only utilized intermittently at fixed or predictable times;

(3) spectrum allocations in which radio systems are currently not deployed; and

(4) spectrum that is harmonized regionally or globally.

(c) PUBLIC CONSULTATION AND RULE CHANGES.—

(1) IN GENERAL.—Not later than 6 months after the report required under subsection (a) is submitted, the NTIA shall conduct a public consultation and, with the Interdepartment Radio Advisory Committee,

develop rules for Federal users to increase spectrum sharing by Federal entities.

(2) CONSIDERATIONS.—In carrying out the rulemaking required under paragraph (1), the NTIA shall consider—

(A) the findings of the report required under subsection (a); and

(B) the recommendations in the Final Report, dated November 8, 2010, issued by the Interference and Dynamic Spectrum Access Subcommittee of the Commerce Spectrum Management Advisory Committee.

Subtitle C—Efficiency and Management

SEC. 521. FUNCTIONAL RESPONSIBILITY OF THE NTIA TO ENSURE EFFICIENT USE OF SPECTRUM.

Section 103(b)(2) of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 902(b)(2)) is amended—

(1) by redesignating subparagraphs (B) through (T) as subparagraphs (C) through (U), respectively; and

(2) by inserting after subparagraph (A) the following:

"(B) The responsibility to promote the best possible and most efficient use of electromagnetic spectrum resources across the Federal Government, subject to and consistent with the needs and missions of Federal agencies.".

SEC. 522. SPECTRUM EFFICIENCY ANALYTIC TOOLS.

(a) IN GENERAL.—Not later than 18 months after the date of enactment of this title, the NTIA, in consultation with NIST and the Commission, as appropriate, shall develop analytic tools or metrics for the NTIA and Federal entities to measure the spectrum efficiency of Federal spectrum systems used by such entities.

(b) REQUIRED CONSIDERATION.—In developing the tools or metrics to measure spectrum efficiency pursuant to subsection (a)(1), the NTIA shall consider the conclusions reached in the report entitled "Definitions of Efficiency in Spectrum Use", authored by the Commerce Spectrum Management Advisory Committee and dated October 1, 2008.

SEC. 523. STUDY ON RECEIVER PERFORMANCE AND SPECTRUM EFFICIENCY.

(a) IN GENERAL.—The Comptroller General of the United States shall conduct a study to consider efforts to ensure that each transmission system that employs radio spectrum is designed and operated so that reasonable use

of adjacent spectrum does not excessively impair the functioning of such system.

(b) REQUIRED CONSIDERATIONS.—At a minimum, the study required under subsection (a) shall consider—

(1) the value of—

(A) improving receiver performance as it relates to increasing spectral efficiency;

(B) improving operation of services in adjacent frequencies; and

(C) narrowing the guard bands between adjacent spectrum use.

(2) the role of manufacturers, commercial licensees, and government users with respect to their transmission systems and use of adjacent spectrum described in subsection (a);

(3) the feasibility of industry self-compliance with respect to the design and operational requirements of transmission systems and the reasonable use of adjacent spectrum described in subsection (a); and

(4) the value of Commission and NTIA action to establish, by rule, technical requirements or standards for non-Federal or Federal use, respectively, with respect to the reasonable use of adjacent spectrum described in subsection (a).

(c) DEFINITION.—For purposes of this section, the term "transmission system" means any telecommunications, broadcast, satellite, commercial mobile service, or other communications system that employs radio spectrum.

(d) REPORT.—Not later than 1 year after the date of enactment of this Act, the Comptroller General of the United States shall submit a report to the appropriate committees of Congress on the results of the study required under subsection (a).

SEC. 524. FREQUENCY ASSIGNMENT.

(a) EXAMINATION.—Not later than 6 months after the date of enactment of this title, the NTIA, in consultation with the Interdepartment Radio Advisory Committee, shall—

(1) examine its frequency assignment processes, including the 5-year frequency assignment review program, and

(2) consider best practices to determine if the current approach for collecting and validating data from Federal entities can be streamlined or improved to help ensure that such entities are managing current and future spectrum assignments efficiently.

(b) REQUIRED CONSIDERATIONS.—In carrying out the requirements of subsection (a), the NTIA shall consider—

(1) providing Federal entities with specific guidance or requirements on how to justify to the NTIA that requested spectrum frequency assignments would fulfill an established mission need and that other means of communication are not appropriate or available;

(2) requiring Federal entities to submit documentation, as part of the spectrum frequency assignment process;

(3) verifying that such entity has completed an analysis to support the use and need of the requested assignment; and

(4) requiring managers of spectrum resources at each Federal entity to validate, verify, or attest to the accuracy of spectrum information submitted by their entity to the NTIA.

SEC. 625. SPECTRUM OPPORTUNITY COST TRANSPARENCY.

(a) ANALYSIS OF ECONOMIC OPPORTUNITY COST.—

(1) DEVELOPMENT OF FRAMEWORK.—

(A) IN GENERAL.—Not later than 1 year after the date of enactment of this title, the NTIA, in consultation with the Commission and the Director of the Office of Management and Budget, shall develop a framework for determining the annual economic opportunity cost of

each specific Federal spectrum band assigned or otherwise allocated for use by Federal entities.

(B) CONSIDERATIONS.—In developing the framework required under subparagraph (A), the NTIA shall take into account the spectrum pricing methodologies adopted by other countries which utilize administered incentive pricing of spectrum for government users.

(2) SCOPE.—The framework developed under paragraph (1) shall cover all Federally allocated spectrum bands between 150 MHz and 6000 MHz, inclusive.

(3) GOALS.—The goal of the framework developed under paragraph (1) is—

(A) to provide Federal entities with a sustained long-term signal of spectrum value to inform the spectrum management decisions of such entities; and

(B) to provide the public with increased transparency about how Federal entities use a scare physical resource.

(4) REQUIREMENTS.—The framework developed under paragraph (1) shall—

(A) define the term "opportunity cost" as the value of the spectrum, in dollar terms, as if

such spectrum were to be reallocated to the highest commercial alternative use that currently does not have access to that spectrum;

(B) be updated, on an annual basis, to take into account observed market valuations from spectrum auctions, secondary spectrum trading, and other market indicators of spectrum value;

(C) determine the opportunity costs borne by each Federal entity for each spectrum band that is entirely under the control of a single agency; and

(D) determine the opportunity costs for spectrum assigned or otherwise allocated to Federal entities for both primary use and secondary use.

(b) REPORT ON OPPORTUNITY COSTS.—Each Federal entity that has been assigned or otherwise allocated use of a Federal spectrum band shall report, as an off-budget item, the opportunity cost borne by the entity for each spectrum band the entity uses—

(1) in the budget of the entity to be included in the budget of the United States Government submitted by the President under section 1105 of title 31, United States Code; and

(2) in the annual financial statement of the entity required to be filed under section 3515 of title 31, United States Code.

(c) SPECTRUM VALUE ANALYSIS.—Not later than 5 years after the date of the enactment of this title, and every 5 years thereafter, each Federal entity that has been assigned or otherwise allocated use of a Federal spectrum band, or otherwise utilizes such spectrum, shall engage in an analysis comparing the opportunity cost of that spectrum, as such cost is determined by the framework developed by the NTIA under subsection (a), to the projected costs of the entity relocating to other government spectrum holdings, co-locating with other government agencies, leasing other non-Federal spectrum, or contracting out for its spectrum activities.

(d) SPECTRUM TECHNOLOGY STUDY.—

(1) IN GENERAL.—Not later than 18 months after the date of the enactment of this title, and every 5 years thereafter, the Comptroller General of the United States, in consultation with NTIA, shall examine the technologies and equipment used by Federal entities operating on Federal spectrum allocations and determine if such technologies and equipment are the most spectrum efficient available.

(2) CERTAIN DETERMINATIONS MADE.—If the results of any study required under paragraph (1) determines that the technologies and equipment of Federal entities operating on Federal spectrum allocations are not the most spectrum efficient available, the Comptroller General shall determine—

(A) what the costs would be to upgrade such systems to more up-to-date and readily available systems;

(B) what benefits would be gained from upgrading, particularly any cost savings or increases in spectrum utilization efficiency; and

(C) if there are any possible problems with upgrading to more up-to-date systems.

SEC. 526. SYSTEM CERTIFICATION.

Not later than 6 months after the date of enactment of this title, the Director of the Office of Management and Budget shall update and revise section 33.4 of OMB Circular A–11 to reflect the recommendations regarding such Circular made in the Commerce Spectrum Management Advisory Committee Incentive Subcommittee report, adopted January 11, 2011.

SEC. 527. REPORT TO CONGRESS ON IMPROVING SPECTRUM MANAGEMENT.

Not later than 3 months after the date of enactment of this title, the NTIA shall submit to the appropriate committees of Congress a report on the status of the NTIA's plan to implement the recommendations contained in the "President's Memorandum on Improving Spectrum Management for the 21st Century", 49 Weekly Comp. Pres. Doc. 2875, Nov. 29, 2004.

SEC. 528. WIRELESS FACILITIES DEPLOYMENT.

(a) FACILITY MODIFICATIONS.—

(1) IN GENERAL.—Notwithstanding section 704 of the Telecommunications Act of 1996 or any other provision of law, a State or local government may not deny, and shall approve, any eligible facilities request for a modification of an existing wireless tower that does not substantially change the physical dimensions of such tower.

(2) ELIGIBLE FACILITIES REQUEST.—For purposes this subsection, the term "eligible facilities request" means any request for modification of an existing wireless tower that involves—

(A) collocation of new transmission equipment;

(B) removal of transmission equipment; and

(C) replacement of transmission equipment.

(b) FEDERAL EASEMENTS AND RIGHTS-OF-WAY.—

(1) GRANT.—If an executive agency, a State, a political subdivision or agency of a State, or a person, firm, or organization applies for the grant of an easement or rights-of-way to, in, over, or on a building owned by the Federal Government for the right to install, construct, and maintain wireless service antenna structures and equipment, and backhaul transmission, the executive agency having control of the building may grant to the applicant, on behalf of the Federal Government, an easement or rights-of-way to perform such installation, construction, and maintenance.

(2) APPLICATION.—The Administrator of the General Services Administration shall develop a common form for rights-of-way applications required under paragraph (1) for all executive agencies that shall be used by applicants with respect to the buildings or property of each such agency.

(3) FEE.—

(A) IN GENERAL.—Notwithstanding any other provision of law, in making a grant of an easement or rights-of-way pursuant to paragraph (1), the Administrator of the General

Services Administration shall establish a fee for the award of such grant that is based on direct cost recovery.

(B) EXCEPTIONS.—The Administrator of the General Services Administration may establish exceptions to the fee amount required under subparagraph (A)—

(i) in consideration of the public benefit provided by a grant of an easement or rights-of-way; and

(ii) in the interest of expanding wireless and broadband coverage.

(4) USE OF FEES COLLECTED.—Any fee amounts collected by an executive agency pursuant to paragraph (2) shall be made available, without further appropriation, to such agency for purposes of the agency's telecommunications and information technology needs and any excess funds shall then be deposited into the Federal Building Fund.

(c) MASTER CONTRACTS FOR WIRELESS TOWER SITINGS.—

(1) IN GENERAL.—Notwithstanding section 704 of the Telecommunications Act of 1996 or any other provision of law, and not later than 60 days after the

date of enactment of this Act, the Administrator of the General Services Administration shall—

(A) develop 1 or more master contracts that shall govern the placement of wireless service antenna structures on buildings and property owned by the Federal Government; and

(B) in developing the master contract, with respect to the siting of wireless service antenna structures, standardize the treatment of the placement of wireless service antenna structures on rooftop or building facades, the placement of equipment on rooftops or inside buildings, and technology, and any other key issues that the Administrator determines appropriate.

(2) APPLICABILITY.—The master contract developed by the Administrator of the General Services Administration under paragraph (1) shall apply to all publicly accessible property owned by the Federal Government, unless the Administrator decides that issues with respect to the siting of a wireless service antenna structure on a specific building or property warrant nonstandard treatment of a specific property.

(3) APPLICATION.—The Administrator of the General Services Administration shall develop a com-

mon form or set of forms for wireless service antenna structure siting applications required under this section for all executive agencies that shall be used by applicants with respect to the buildings of each such agency.

TITLE VI—STUDIES ON NEXT GENERATION 9-1-1 SERVICES

SEC. 601. DEFINITIONS.

As used in this title, the following definitions shall apply:

(1) 9–1–1 SERVICES.—The term "9–1–1 services" includes both E9–1–1 services and Next Generation 9–1–1 services.

(2) E9–1–1 SERVICES.—The term "E9–1–1 services" means both phase I and phase II enhanced 9–1–1 services, as described in section 20.18 of the Commission's regulations (47 C.F.R. 20.18), as in effect on the date of enactment of this title, or as subsequently revised by the Commission.

(3) NEXT GENERATION 9–1–1 SERVICES.—The term "Next Generation 9–1–1 services" means an IP-based system comprised of hardware, software, data, and operational policies and procedures that—

(A) provides standardized interfaces from emergency call and message services to support emergency communications;

(B) processes all types of emergency calls, including voice, data, and multimedia information;

(C) acquires and integrates additional emergency call data useful to call routing and handling;

(D) delivers the emergency calls, messages, and data to the appropriate public safety answering point and other appropriate emergency entities;

(E) supports data or video communications needs for coordinated incident response and management; or

(F) provides broadband service to public safety answering points or other first responder entities.

(4) PUBLIC SAFETY ANSWERING POINT.—The term "public safety answering point" has the meaning given the term in section 222 of the Communications Act of 1934 (47 U.S.C. 222).

SEC. 602. NHTSA REPORT ON COSTS FOR REQUIREMENTS AND SPECIFICATIONS OF NEXT GENERATION 9–1–1 SERVICES.

(a) IN GENERAL.—Not later than 1 year after the date of enactment of this title, the Administrator of the National Highway Traffic Safety Administration, in consultation with the Commission and the Secretary of Homeland Security, shall prepare and submit a report to Congress that analyzes and determines detailed costs for specific Next Generation 9–1–1 service requirements and specifications.

(b) PURPOSE OF REPORT.—The purpose of the report required under subsection (a) is to serve as a resource for Congress as it considers creating a coordinated, long-term funding mechanism for the deployment and operation, accessibility, application development, equipment procurement, and training of personnel for Next Generation 9–1–1 services.

(c) REQUIRED INCLUSIONS.—The report required under subsection (a) shall include the following:

(1) How costs would be broken out geographically and/or allocated among public safety answering points, broadband service providers, and third-party providers of Next Generation 9-1-1 services.

(2) An assessment of the current state of Next Generation 9–1–1 service readiness among public safety answering points.

(3) How differences in public safety answering points' access to broadband across the country may affect costs.

(4) A technical analysis and cost study of different delivery platforms such as wireline, wireless, and satellite.

(5) An assessment of the architectural characteristics, feasibility, and limitations of Next Generation 9–1–1 service delivery.

(6) An analysis of the needs for Next Generation 9–1–1 service of persons with disabilities.

(7) Standards and protocols for Next Generation 9–1–1 service and for incorporating Voice over Internet Protocol and "Real-Time Text" standards.

SEC. 603. FCC RECOMMENDATIONS FOR LEGAL AND STATUTORY FRAMEWORK FOR NEXT GENERATION 9–1–1 SERVICES.

Not later than 1 year after the date of enactment of this title, the Commission, in coordination with the Secretary of Homeland Security and the Administrator of the National Highway Traffic Safety Administration, shall prepare and submit a report to Congress that contains recommendations for the legal and statutory framework for Next Generation 9–1–1 services, consistent with recommendations in the National Broadband Plan developed *by the Commission pursuant to Public Law 111–5, including the following:*

(1) A legal and regulatory framework for the development of Next Generation 9–1–1 services and the transition from legacy 9–1–1 to Next Generation 9–1–1 networks.

(2) Legal mechanisms to ensure efficient and accurate transmission of 9–1–1 caller information to emergency response agencies.

(3) Recommendations for removing jurisdictional barriers and inconsistent legacy regulations including—

(A) proposals that would require States to remove regulatory roadblocks to Next Generation 9–1–1 services development, while recognizing existing State authority over 9–1–1 services;

(B) eliminating outdated 9–1–1 regulations at the Federal level; and

(C) preempting inconsistent State regulations.

TITLE VII—MISCELLANEOUS

SEC. 701. SEVERABILITY.

If any provision of this Act or an amendment made by this Act, or the application of the provision to any person or circumstance, is held to be unconstitutional, the re-

mainder of this Act and the amendments made by this Act, and the application of the provisions of this Act and the amendments made by this Act to any other person or circumstance, shall not be affected thereby.

SEC. 702. RULE OF CONSTRUCTION.

Nothing in this Act shall be construed as adding or subtracting from the authority the Commission may or may not have to regulate broadband Internet access service.

TITLE VIII—COMPLIANCE WITH STATUTORY PAY-AS-YOU-GO ACT

SEC. 801. BUDGET COMPLIANCE.

The budgetary effects of this Act, for the purpose of complying with the Statutory Pay-As-You-Go-Act of 2010, shall be determined by reference to the latest statement titled "Budgetary Effects of PAYGO Legislation" for this Act, submitted for printing in the Congressional Record by the Chairman of the Senate Budget Committee, provided that such statement has been submitted prior to the vote on passage.

II

112TH CONGRESS
1ST SESSION

S. 28

To amend the Communications Act of 1934 to provide public safety providers an additional 10 megahertz of spectrum to support a national, interoperable wireless broadband network and authorize the Federal Communications Commission to hold incentive auctions to provide funding to support such a network, and for other purposes.

IN THE SENATE OF THE UNITED STATES

JANUARY 25 (legislative day, JANUARY 5), 2011

Mr. ROCKEFELLER (for himself, Mr. LAUTENBERG, Mr. NELSON of Florida, Ms. KLOBUCHAR, Mr. CARDIN, and Mr. HARKIN) introduced the following bill; which was read twice and referred to the Committee on Commerce, Science, and Transportation

---

A BILL

To amend the Communications Act of 1934 to provide public safety providers an additional 10 megahertz of spectrum to support a national, interoperable wireless broadband network and authorize the Federal Communications Commission to hold incentive auctions to provide funding to support such a network, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE; TABLE OF CONTENTS.

(a) SHORT TITLE.—This Act may be cited as the "Public Safety Spectrum and Wireless Innovation Act".

(b) TABLE OF CONTENTS.—The table of contents for this Act is as follows:

SEC. 2. DEFINITIONS.

In this Act:

(1) 700 MHZ BAND.—The term "700 MHz band" means the portion of the electromagnetic spectrum between the frequencies from 698 megahertz to 806 megahertz.

(2) 700 MHZ D BLOCK SPECTRUM.—The term "700 MHz D block spectrum" means the portion of the electromagnetic spectrum between the frequencies from 758 megahertz to 763 megahertz and between the frequencies from 788 megahertz to 793 megahertz.

(3) ASSISTANT SECRETARY.—The term "Assistant Secretary" means the Assistant Secretary of Commerce for Communications and Information.

(4) COMMISSION.—The term "Commission" means the Federal Communications Commission.

(5) CONSTRUCTION FUND.—The term "construction fund" means the fund established in section 201(a)(1)(A).

(6) EXISTING PUBLIC SAFETY BROADBAND SPECTRUM.—The term "existing public safety broadband spectrum" means the portion of the electromagnetic spectrum between the frequencies from 763 megahertz to 768 megahertz and between the frequencies from 793 megahertz to 798 megahertz.

(7) MAINTENANCE AND OPERATION FUND.—The term "maintenance and operation fund" means the fund established in section 201(a)(2)(A).

(8) NARROWBAND SPECTRUM.—The term "narrowband spectrum" means the portion of the electromagnetic spectrum between the frequencies from 769 megahertz to 775 megahertz and between the frequencies from 799 megahertz to 805 megahertz.

(9) NTIA.—The term "NTIA" means the National Telecommunications and Information Administration.

TITLE I—NATIONWIDE INTEROPERABLE PUBLIC SAFETY BROADBAND NETWORK

SEC. 101. ESTABLISHMENT OF NETWORK.

(a) IN GENERAL.—The Commission shall take all actions necessary to ensure the deployment of a nationwide public safety interoperable broadband network in the 700 MHz band, including—

(1) developing and implementing nationwide technical and operational requirements for the network;

(2) adopting any rules necessary to achieve interoperability in the network; and

(3) adopting user authentication and encryption requirements for the network.

(b) COVERAGE.—The Commission shall ensure that the network is deployed and interoperable in rural, as well as urban, areas, including necessary build out of communications infrastructure in rural areas to accommodate network access and functionality.

SEC. 102. REALLOCATION OF D BLOCK TO PUBLIC SAFETY.

(a) REALLOCATION OF D BLOCK.—

(1) IN GENERAL.—The Commission shall reallocate the 700 MHz D block spectrum for use by public safety entities in accordance with the provisions of this Act.

(2) SPECTRUM ALLOCATION.—Section 337(a) of the Communications Act of 1934 (47 U.S.C. 337(a)) is amended—

(A) by striking "24" in paragraph (1) and inserting "34"; and

(B) by striking "36" in paragraph (2) and inserting "26".

(b) INTEGRATION WITH EXISTING PUBLIC SAFETY BROADBAND SPECTRUM.—The Commission shall—

(1) determine the licensing for the 700 MHz D block spectrum reallocated under section 337 of the Communications Act of 1934 (47 U.S.C. 337), as amended by subsection (a);

(2) determine how best to integrate the 700 MHz D block spectrum reallocated with the existing public safety spectrum; and

(3) determine whether the 20 megahertz of public safety broadband spectrum should be licensed on a nationwide, regional, or statewide basis, or some combination thereof, in accordance with the public interest.

SEC. 103. FLEXIBLE USE OF NARROWBAND SPECTRUM.

The Commission shall allow the narrowband spectrum to be used in a flexible manner, including usage for public safety broadband communications, subject to such technical and interference protection measures as the Commission may require.

SEC. 104. SECONDARY USE OF PUBLIC SAFETY SPECTRUM.

(a) IN GENERAL.—Notwithstanding section 337 of the Communications Act of 1934 (47 U.S.C. 337), the Commission may authorize any public safety licensee or licensees to allow access to spectrum licensed to such licensee or licensees to non-public safety governmental users, commercial users, utilities, including organizations providing or operating critical infrastructure, including electric, gas, and water utilities, and other Federal agencies and departments.

(b) LIMITATIONS AND CONDITIONS.—The Commission shall—

(1) authorize the provision of access to such spectrum only on a secondary basis;

(2) require secondary access agreements to be in writing and to be submitted to the Commission for review and approval;

(3) require that the public safety entity retain the right to use any such spectrum on a primary, preemptible basis;

(4) consider whether it is in the public interest to require multiple secondary leases per licensee; and

(5) require that all funds received from such secondary access pursuant to such written agreements be reinvested in the public safety interoperable broadband network by using such funds only for constructing, maintaining, improving, or purchasing equipment to be used in conjunction with the network, by deposit into the Mainteuance and Operation Fund established by section 201 or otherwise.

SEC. 105. INTEROPERABILITY.

(a) IN GENERAL.—The Commission shall ensure that the nationwide public safety broadband network is fully interoperable on a nationwide basis.

(b) TECHNICAL AND OPERATIONAL RULES.—

(1) INSURING INTEROPERABILITY.—The Commission shall establish technical and operational rules to ensure nationwide interoperability, including rules that—

(A) establish requirements for nationwide roaming ability among any licensee, licensees, lessees, and secondary users;

(B) will ensure the safety of State broadband public safety networks, including requirements for protecting and monitoring the network to protect against cyber-attack;

(C) will promote competition in the device market for public safety communications by requiring devices for use on a public safety network to be—

(i) built to open standards;

(ii) capable of being used by any vendor and across all public safety systems; and

(iii) backward-compatible with existing second and third generation commercial networks;

(D) authorize public safety entities to execute partnerships with other public or private entities to build or operate the State's public safety broadband network;

(E) encourage public safety entities to utilize, to the greatest extent possible, existing commercial, State, or Federal Government infrastructure;

(F) will ensure that the interoperability plan includes integration with 9–1–1 call centers; and

(G) require any licensee or licensees to file annual reports on—

(i) the status of public safety broadband network construction and interoperability; and

(ii) the status and deployment of existing public safety broadband and narrowband systems.

(2) FACTORS TO BE CONSIDERED.—In carrying out paragraph (1), the Commission shall, at a minimum, consider—

(A) the extent to which particular technologies and user equipment are, or are likely to be, available in the commercial marketplace;

(B) the availability of necessary technologies and equipment on reasonable and nondiscriminatory licensing terms; and

(C) the ability of particular technologies and equipment—

(i) to evolve with technological developments in the commercial marketplace; and

(ii) to accommodate prioritization for public safety transmissions.

(c) RFP STANDARDS.—

(1) IN GENERAL.—The Commission shall establish procedural and substantive requirements for requests for proposals related to the nationwide public safety broadband network that—

(A) require such requests to meet the technical requirements under subsection (b) that ensure interoperability of the broadband network to which it relates and ensure that nothing will interfere with such interoperability;

(B) limit the authority for issuing such requests to States or mnlti-State organizations, except to the extent delegated to an agency or political subdivision;

(C) will ensure that the request-for-proposals process is open, transparent, and competitive;

(D) require any such request—

(i) to be issued on a Statewide or multi-State basis and to be coordinated with the appropriate State chief executive or the executive's designee;

(ii) to demonstrate that the State has a plan for interoperability, with provision for both urban and rural build out; and

(iii) to cover any necessary relocation of incumbent narrowband operations in the existing public safety broadband spectrum;

(E) authorize States to issue requests for proposals that will build on a State broadband network; and

(F) require the term of any contract under the process to be reasonable and, in any event, for less than the term of the underlying license.

(2) MODEL RFPS.—The Commission may encourage the use of the requests-for-proposal model or form developed by the Government Accountability Office under section 207 of this Act.

(d) RURAL BUILD OUT REQUIREMENTS.—The Commission shall—

(1) establish rural build out targets for the public safety broadband network, including targets for States or smaller areas;

(2) require contracts awarded through the request-for-proposals process in connection with the network to include deployment phases with substantial rural coverage milestones as part of each phase where appropriate; and

(3) in collaboration with the Assistant Secretary, make funding for each build ont phase after

the first contingent on meeting build out targets for the preceding phase to the extent feasible.

(e) DEVELOPMENT AND MAINTENANCE OF INTEROPERABILITY, SECURITY, AND FUNCTIONALITY STANDARDS.—The Commission and through agreements executed with the National Institute of Standards and Technology, shall develop, maintain, and update such requirements and standards as may be necessary to ensure interoperability, security, and functionality.

(f) AUTHORIZATION OF APPROPRIATIONS.—There are authorized to be appropriated to the Commission, for use by the Emergency Response and Interoperability Center in carrying out its responsibilities under this Act, $5,500,000 for each of fiscal years 2013 through 2018.

SEC. 106. COMMERCIAL NETWORK ROAMING AND PRIORITY ACCESS.

The Commission may adopt rules, if necessary in the public interest, to improve the ability of public safety networks to roam onto commercial networks and to gain priority access to commercial networks in an emergency if—

(1) the public safety entity equipment is technically compatible with the commercial network;

(2) the commercial network is reasonably compensated; and

(3) it is consistent with the public interest.

SEC. 107. PUBLIC SAFETY ADVISORY BOARD.

(a) IN GENERAL.—Not later than 90 days after the date of enactment of this Act, the Commission shall establish a public safety advisory board to advise the Commission on—

(1) carrying out its duties under section 101; and

(2) the implementation of improvements to the public safety interoperable broadband network under that section.

(b) COMPOSITION.—The Commission shall determine the composition of the advisory board, which shall include, at a minimum, representatives from each of the following:

(1) State, local, and tribal governments.

(2) Public safety organizations.

(3) Providers of commercial mobile service.

(4) Manufacturers of communications equipment.

(c) REPORTS.—The Commission shall consult with the advisory board on any study or report on public safety spectrum.

(d) FACA INAPPLICABLE.—The Federal Advisory Committee Act (5 U.S.C. App.) shall not apply to the advisory board.

(e) TERMINATION.—The advisory board shall terminate 10 years after the date of enactment of this Act.

TITLE II—FUNDING

SEC. 201. ESTABLISHMENT OF FUNDS.

(a) IN GENERAL.—

(1) CONSTRUCTION FUND.—

(A) ESTABLISHMENT.—There is established in the Treasury of the United States a fund to be known as the Public Safety Interoperable Broadband Network Construction Fund.

(B) PURPOSE.—The Assistant Secretary shall establish and administer the grant program under section 202 using the funds deposited in the Construction Fund.

(C) CREDIT.—

(i) BORROWING AUTHORITY.—The Assistant Secretary may borrow from the general fund of the Treasury beginning on October 1, 2011, such sums as may be necessary, but not to exceed $2,000,000,000, to implement section 202.

(ii) REIMBURSEMENT.—The Secretary of the Treasury shall reimburse the general fund of the Treasury, without interest, for any amounts borrowed under clause (i) as funds are deposited into the Construction

Fund, but in no case later than December 31, 2015.

(2) MAINTENANCE AND OPERATION FUND.—

(A) ESTABLISHMENT.—There is established in the Treasury of the United States a fund to be known as the Public Safety Interoperable Broadband Network Maintenance and Operation Fund.

(B) PURPOSE.—The Commission shall use the funds deposited in the Maintenance and Operation Fund to carry out section 203.

(b) TRANSFER OF FUNDS AT COMPLETION OF CONSTRUCTION.—The Secretary of the Treasury shall transfer to the Maintenance and Operation Fund any funds remaining in the Construction Fund after the date of the completion of the construction phase, as determined by the Assistant Secretary.

(c) TRANSFER OF FUNDS TO THE TREASURY.—The Secretary of the Treasury shall transfer to the general fund of the Treasury any funds remaining in the Maintenance and Operation Fund after the end of the 10-year period that begins after the date of the completion of the construction phase, as determined by the Assistant Secretary.

(d) AUTHORIZATION OF APPROPRIATIONS.—

(1) CONSTRUCTION FUND.—There are authorized to be appropriated to the Assistant Secretary for deposit in the Construction Fund in and after fiscal year 2013 such sums as necessary subject to paragraph (3).

(2) MAINTENANCE AND OPERATION FUND.—There are authorized to be appropriated to the Commission for deposit in the Maintenance and Operation Fund in and after fiscal year 2013 such sums as necessary subject to paragraph (3).

(3) LIMITATION.—The authorization of appropriations under paragraphs (1) and (2) may not exceed a total of $11,000,000,000.

SEC. 202. PUBLIC SAFETY INTEROPERABLE BROADBAND NETWORK CONSTRUCTION.

(a) CONSTRUCTION GRANT PROGRAM ESTABLISHMENT.—The Assistant Secretary, in consultation with the Commission, shall take such action as is necessary to establish a grant program to assist public safety entities to establish a nationwide public safety interoperable broadband network in the 700 MHz band.

(b) PROJECTS.—Grants may be made under this section for the construction of a public safety interoperable broadband network, including improvement of existing commercial and noncommercial networks and facilities and construction of new infrastructure to meet public safety requirements, as defined by the Commission, that operate as part of the public safety interoperable broadband network in the 700 MHz band.

(c) MATCHING REQUIREMENTS.—

(1) FEDERAL SHARE.—

(A) IN GENERAL.—The Federal share of the cost of carrying out a project under this section may not exceed 80 percent of the eligible costs of carrying out a project, as determined by the Assistant Secretary in consultation with the Commission.

(B) WAIVER.—The Assistant Secretary may waive, in whole or in part, the requirements of subparagraph (A) for good cause shown if it determines that such a waiver is in the public interest.

(2) NON-FEDERAL SHARE.—The non-Federal share of the cost of carrying out a project under this section may be provided through an in-kind contribution.

(d) REQUIREMENTS.—Not later than 6 months after the date of enactment of this Act, the Assistant Secretary, in consultation with the Commission, shall establish grant program requirements including the following:

(1) Demonstrated compliance with applicable Commission request-for-proposal and license terms and service rules, including interoperability and technical rules, construction requirements, and secondary use rules.

(2) Defining entities that are eligible to receive a grant under this section.

(3) Defining eligible costs for purposes of subsection (c)(1).

(4) Determining the scope of network infrastructure eligible for grant funding under this section.

(5) Prioritizing grants for projects that ensure coverage in rural as well as urban areas.

SEC. 203. PUBLIC SAFETY INTEROPERABLE BROADBAND MAINTENANCE AND OPERATION.

(a) MAINTENANCE AND OPERATION REIMBURSEMENT PROGRAM.—The Commission shall administer a program through which not more than 50 percent of maintenance and operational expenses associated with the public safety interoperable broadband network may be reimbursed from the Maintenance and Operation Fund for those expenses that are attributable to the maintenance, operation, and improvement of the public safety interoperable broadband network.

(b) REPORT.—Not later than 7 years after the date of enactment of this Act, the Commission shall submit to Congress a report on whether to continue to provide funding for the Maintenance and Operation Fund after the end of the 10-year period that begins after the date of the completion of the construction phase, as determined by the Assistant Secretary.

SEC. 204. AUCTION OF SPECTRUM.

(a) IN GENERAL.—

(1) IDENTIFICATION OF SPECTRUM.—Not later than 1 year after the date of enactment of this Act, the Assistant Secretary shall identify, at a minimum, 25 megahertz of contiguous spectrum at frequencies located between 1675 megahertz and 1710 megahertz, inclusive, to be made available for immediate reallocation.

(2) AUCTION.—Not later than January 31, 2014, the Commission shall conduct the auction of the licenses, by commencing the bidding, for the following:

(A) The spectrum between the frequencies of 2155 megahertz and 2180 megahertz, inclusive.

(B) The spectrum identified pursuant to paragraph (1).

(3) PROCEEDS.—The proceeds (including deposits and up front payments from successful bidders) from the auction shall be deposited in the Construction Fund.

(b) INCENTIVE SPECTRUM AUCTION AUTHORITY.—

(1) IN GENERAL.—Paragraph (8) of section 309(j) of the Communications Act of 1934 (47 U.S.C. 309(j)) is amended—

(A) by striking "(B), (D), and (E)," in subparagraph (A) and inserting "(B), (D), (E), and (F),"; and

(B) by adding at the end thereof the following:

"(F) INCENTIVE AUCTION AUTHORITY.—

"(i) AUTHORITY.—The Commission may if the Commission determines that it is consistent with the public interest in utilization of the spectrum for a licensee to relinquish voluntarily some or all of its licensed spectrum usage rights in order to permit the assignment of new initial licenses subject to new service rules, the Commission may disburse to that licensee a portion of the auction proceeds related to the new use that the Commission determines, in its discretion, are attributable to the licensee's relinquished spectrum usage.

"(ii) PROCEEDS FOR FUNDS.—Notwithstanding subparagraph (A), the proceeds (including deposits and up front payments from successful bidders) from the use of a competitive bidding system under this subsection with respect to relinquished spectrum, after deduction of any amounts disbursed to the relinquishing licensee, shall be deposited as follows:

"(I) All proceeds less than or equal to $5,500,000,000 shall be deposited in the Construction Fund and shall be made available to the Assistant Secretary without further appropriations.

"(II) Any proceeds exceeding $5,500,000,000 shall be deposited in the Maintenance and Operation Fund and shall be made available to the Commission without further appropriations.

"(III) Any proceeds exceeding $11,000,000,000 shall be made available, as provided by appropriation Acts, for growth-enhancing infrastructure projects, including the NextGen aviation navigation system, development of high-speed rail transportation, and Smart Grid electrical power transmission and management technology.''.

(c) EXTENSION OF AUCTION AUTHORITY.—Section 309(j)(11) of the Communications Act of 1934 (47 U.S.C. 309(j)(11)) is amended by striking "2012" and inserting "2020".

(d) LIMITATION.—

(1) IN GENERAL.—The Commission may not reclaim frequencies licensed to broadcast television licensees or other licensees, directly or indirectly, on an involuntary basis for purposes of section 309(j)(8)(F) of the Communications Act of 1934.

(2) RULE OF CONSTRUCTION.—Nothing in this Act or in the amendments made by this Act shall be construed to permit the Commission to reclaim frequencies of broadcast television licensees or any other licensees directly or indirectly on an involuntary basis for the purpose that section.

SEC. 205. REPORT ON EFFICIENT USE OF PUBLIC SAFETY SPECTRUM.

Not later than 5 years after the date of enactment of this Act and every 5 years thereafter, the Commission shall conduct a study and submit a report to the Senate Committee on Commerce, Science, and Transportation and the House of Representatives Committee on Energy and Commerce on the spectrum held by the public safety entities. In the report the Commission shall—

(1) examine how such spectrum is being used;

(2) provide a recommendation for whether more spectrum needs to be made available to meet the needs of public safety entities; and

(3) assess the opportunity for return of any spectrum to the Commission for auction to commercial providers to provide revenue to the Treasury of the United States.

SEC. 206. GAO REPORT ON SATELLITE BROADBAND.

Not later than 2 years after the date of enactment of this Act, the Comptroller General of the United States shall conduct a study and submit to Congress a report on the current and future capabilities of fixed and mobile satellite broadband to assist public safety entities during an emergency.

SEC. 207. ACCESS TO GSA SCHEDULES.

The Administrator of General Services shall—

(1) establish rules under which public safety entities may access and use the rates offered to the General Services Administration for communications services and devices;

(2) develop and furnish to the Commission a model request-for-proposals form for public safety use under section 105; and

(3) develop a procedure under which public safety entities are authorized to purchase from established GSA schedules.

SEC. 208. FEDERAL INFRASTRUCTURE SHARING.

The Administrator of General Services shall establish rules to allow any public safety licensee or licensees to have access to Federal infrastructure to construct and maintain the public safety interoperable broadband network.

SEC. 209. AUDITS.

(a) IN GENERAL.—Not later than 3 years after the date of enactment of this Act, and every 3 years thereafter, the Comptroller General of the United States shall perform an audit of the financial statements, records, and accounts of the—

(1) Public Safety Interoperable Broadband Network Construction Fund established under section 201(a)(1);

(2) Public Safety Interoperable Broadband Network Maintenance and Operation Fund established under section 201(a)(2);

(3) construction grant program established under section 202; and

(4) maintenance and operation program established under section 203.

(b) GAAP.—Each audit required under subsection (a) shall be conducted in accordance with generally acceptable accounting procedures.

(c) REPORT TO CONGRESS.—A copy of each audit required under subsection (a) shall be submitted to the appropriate committees of Congress.

SEC. 210. ANTIDIVERSION PROHIBITION.

Except as provided in section 309(j)(8)(F)(ii)(III) of the Communications Act of 1934, as added by this Act, no funds made available under this Act or any amendment made by this Act may be used for any purpose other than in support of the nationwide public safety interoperable broadband network to be deployed under this Act, including the acquisition, construction, or reconstruction of infrastructure and facilities, the purchase of equipment and services, including hardware, software, and training, in accordance with rules established by the Commission.

○

112TH CONGRESS
1ST SESSION

S. 1040

To enhance public safety by making more spectrum available to public safety entities, to facilitate the development of a public safety broadband network, to provide standards for the spectrum needs of public safety entities, and for other purposes.

IN THE SENATE OF THE UNITED STATES

MAY 19, 2011

Mr. LIEBERMAN (for himself and Mr. MCCAIN) introduced the following bill; which was read twice and referred to the Committee on Commerce, Science, and Transportation

---

A BILL

To enhance public safety by making more spectrum available to public safety entities, to facilitate the development of a public safety broadband network, to provide standards for the spectrum needs of public safety entities, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE; TABLE OF CONTENTS.

(a) SHORT TITLE.—This Act may be cited as the "Broadband for First Responders Act of 2011".

(b) TABLE OF CONTENTS.—The table of contents for this Act is as follows:

TITLE I—ALLOCATION AND ASSIGNMENT OF PUBLIC SAFETY LICENSES AND ESTABLISHMENT OF RULES

SEC. 101. DEFINITIONS RELATING TO PUBLIC SAFETY BROADBAND.

Section 337(f) of the Communications Act of 1934 (47 U.S.C. 337(f)) is amended—

(1) by redesignating paragraphs (1) and (2) as paragraphs (3) and (4), respectively; and

(2) by inserting before paragraph (3), as so redesignated, the following:

"(1) PUBLIC SAFETY BROADBAND LICENSEE.—The term 'public safety broadband licensee' means a licensee, as defined by the Commission in its Second Report and Order adopted July 31, 2007 (FCC 07–132), and selected in the Commission's Order adopted November 19, 2007 (FCC 07–199), by the Commission to be the licensee for the 763–768/793–798 MHz.

"(2) PUBLIC SAFETY BROADBAND SPECTRUM.—The term 'public safety broadband spectrum' means the electromagnetic spectrum between 758 megahertz and 768 megahertz, inclusive, and 788 megahertz and 798 megahertz, inclusive, and any additional electromagnetic frequencies allocated by the Commission for public safety broadband use.".

SEC. 102. ALLOCATION AND ASSIGNMENT OF PUBLIC SAFETY LICENSES.

(a) SPECTRUM ALLOCATION.—Section 337(a) of the Communications Act of 1934 (47 U.S.C. 337(a)) is amended—

(1) in paragraph (1), by striking "24" and inserting "34"; and

(2) in paragraph (2), by striking "36" and inserting "26".

(b) ASSIGNMENT.—Section 337(b) of the Communications Act of 1934 (47 U.S.C. 337(b)) is amended to read as follows:

"(b) ASSIGNMENT.—

"(1) ALLOCATION OF PAIRED BANDS.—Not later than 30 days after the date of enactment of the Broadband for First Responders Act of 2011, the Commission shall allocate the paired electromagnetic spectrum bands of 758–763 megahertz and 788–793 megahertz for public safety broadband communications.

"(2) LICENSING OF PAIRED BANDS.—Not later than 60 days after the date of enactment of the Broadband for First Responders Act of 2011, the Commission shall license the paired electromagnetic spectrum bands described under subparagraph (A) to the public safety broadband licensee.".

SEC. 103. ESTABLISHMENT OF RULES GOVERNING PUBLIC SAFETY BROADBAND NETWORK.

(a) ESTABLISHMENT OF RULES.—Not later than 180 days after the date of enactment of this Act, the Federal Communications Commission shall establish the following rules:

(1) AUTHORIZING THE CONSTRUCTION AND OPERATION OF A PUBLIC SAFETY BROADBAND NET-

WORK.—The Commission shall permit the public safety broadband licensee to authorize providers of public safety services to construct and operate a wireless public safety broadband network in the public safety broadband spectrum.

(2) ESTABLISHING NETWORK REQUIREMENTS.—The Commission shall require that the wireless public safety broadband network described under paragraph (1) shall—

(A) be fully interoperable and remain interoperable with, and in conformance with the same broadband technology standards as all other public safety broadband systems deployed or authorized;

(B) provide for roaming by Federal, State, local, and tribal governments and other authorized users of the spectrum licensed to the public safety broadband licensee;

(C) provide priority access to public safety entities;

(D) be built to survive most disasters;

(E) ensure that networks of such systems have the appropriate level of cyber security; and

(F) ensure that authorized users have the ability to develop a local network, provided that the uses for such network are consistent with rules established by the Commission.

(3) ALLOWING FOR SHARED USE OF PUBLIC SAFETY BROADBAND SPECTRUM AND NETWORK INFRASTRUCTURE.—The Commission shall—

(A) authorize the shared use, sublicensing, or leasing of the public safety broadband spectrum and network infrastructure by entities that are not defined as public safety services, subject to the requirements that public safety services retain priority access to the spectrum, pursuant to procedures adopted by the Commission, provided that—

(i) the needs of other governmental entities are considered before commercial entities; and

(ii) such use is approved by the public safety broadband licensee;

(B) allow use of the public safety broadband spectrum by emergency response providers;

(C) ensure that any revenues derived from any such shared use, sublicensing, or lease are deposited in the Public Safety Interoperable Broadband Network Maintenance and Operation Fund established under section 202(a)(2); and

(D) ensure that the Commission retains, for the 60-day period following submission of a request for such shared use, sublicensing, or lease the right to review and approve of any such shared use, sublicensing, or lease.

(4) PROVIDING FOR INTEROPERABILITY AND ROAMING AGREEMENTS.—The Federal Communications Commission, in consultation with the Director of the National Institute of Standards and Technology, the Secretary of Homeland Security, the Attorney General, and Federal, State, local, and tribal public safety agencies, shall establish rules that enable—

(A) nationwide interoperability between wireless public safety broadband networks and commercial broadband networks; and

(B) roaming by public safety entities operating on a wireless public safety broadband network across any commercial network so as to gain guaranteed access to a resilient and reliable commercial network in times of an emergency.

(b) DEFINITIONS.—As nsed in this section—

(1) the term "emergency response provider" has the same meaning as in section 2 of the Homeland Security Act of 2002 (6 U.S.C. 101); and

(2) the terms "public safety broadband licensee", "public safety broadband spectrum", and "public safety services" shall have the same meaning as in section 337(f) of the Communications Act of 1934 (47 U.S.C. 337(f)).

SEC. 104. ESTABLISHMENT OF STANDARDS.

Not later than 180 days after the date of enactment of this Act, the Secretary of Homeland Security, in coordination with the Director of the National Institute of Standards and Technology, shall establish an appropriate set of public safety requirements for meeting the interoperability and roaming requirements developed under section 103(a)(4) taking into consideration—

(1) the extent to which particular technologies and user equipment are, or are likely to be, available in the commercial marketplace;

(2) the availability of necessary technologies and equipment on reasonable and nondiscriminatory licensing terms;

(3) the ability of such requirements to evolve with technological developments in the commercial marketplace;

(4) the ability of such requirements to accommodate prioritization for public safety transmissions;

(5) the ability of such requirements to accommodate appropriate security measures for public safety transmissions; and

(6) any other considerations the Federal Communications Commission deems appropriate.

SEC. 105. SUBMISSION AND APPROVAL OF INTEROPERABILITY COMMUNICATIONS PLANS BY STATES.

(a) IN GENERAL.—Not later than 6 months after the date of publication in the Federal Register of the rules required by section 103 and the date of release of the standards required by section 104, each State shall submit a plan to the Secretary of Homeland Security and the Federal Communications Commission detailing the terms and aspects of the phased deployment for the wireless public safety broadband network to be constructed in the public safety broadband spectrum pursuant to section 103(a)(1).

(b) APPROVAL.—Not later than 120 days after the submission of a plan under subsection (a), the Secretary of Homeland Security and the Federal Communications Commission shall either jointly approve or disapprove of the plan.

SEC. 106. RULE OF CONSTRUCTION FOR PUBLIC SAFETY BROADBAND LICENSEE.

Nothing in this Act, or the amendments made by this Act, shall be construed to overturn, supercede, or otherwise preempt the Federal Communications Commission's Order adopted on November 19, 2007 (FCC 07–199), setting forth the roles and responsibilities of the public safety broadband licensee (as such term is defined in section 337(f) of the Communications Act of 1934) and the Federal Communications Commission, except that the following shall, by rule or order, be modified by the Commission:

(1) Any organization seeking membership to the Board of Directors of the public safety broadband licensee shall be voted in by a simple majority of the then serving members of the Board of Directors.

(2) The Board of Directors of the public safety broadband licensee shall include the following organizations:

(A) International Association of Chiefs of Police.

(B) International Association of Fire Chiefs.

(C) National Sheriffs' Association.

(D) International Association of Fire Fighters.

(E) National Volunteer Fire Council.

(F) Fraternal Order of Police.

(G) Major Cities Chiefs Association.

(H) Metropolitan Fire Chiefs Association.

(I) Major County Sheriffs' Association.

(J) Association of Public-Safety Communications Officials, International.

(K) National Emergency Management Association.

(L) International Association of Emergency Managers.

(M) Police Executive Research Forum.

(N) National Criminal Justice Association.

(O) National Association of Police Organizations.

(P) National Organization of Black Law Enforcement Executives.

(Q) Association of Air Medical Services.

(R) Advocates for Emergency Medical Services.

(S) Emergency Nurses Association.

(T) National Association of Emergency Medical Services Physicians.

(U) National Association of Emergency Medical Technicians.

(V) National Association of State Emergency Medical Services Officials.

(W) National Emergency Medical Services Management Association.

(X) International Municipal Signal Association.

(Y) American Probation and Parole Association.

(Z) National Governors Association.

(AA) National Association of Counties.

(BB) National League of Cities.

(CC) United States Conference of Mayors.

(DD) Council of State Governments.

(EE) International City/County Management Association.

(FF) National Conference of State Legislatures.

(GG) National Association of Regional Councils.

(HH) Utilities Telecom Council.

(II) American Association of State Highway Transportation Officials.

(JJ) American Hospital Association.

(KK) Forestry Conservation Communications Association.

(LL) National Association of State 911 Administrators.

(MM) National Troopers Coalition.

(NN) National Emergency Number Association.

(OO) American Public Works Association.

TITLE II—FUNDING

SEC. 201. DEFINITIONS.

In this title—

(1) the term "appropriate committees of Congress" means—

(A) the Committee on Homeland Security and Governmental Affairs of the Senate;

(B) the Committee on Commerce, Science, and Transportation of the Senate;

(C) the Committee on Energy and Commerce of the House of Representatives; and

(D) the Committee on Homeland Security of the House of Representatives;

(2) the term "Assistant Secretary" means the Assistant Secretary of Commerce for Communications and Information;

(3) the term "Commission" means the Federal Communications Commission;

(4) the term "Construction Fund" means the Public Safety Interoperable Broadband Network Construction Fund established under section 202(a)(1);

(5) the term "Indian tribe" has the same meaning as in section 4 of the Indian Self Determination Act (25 U.S.C. 450b);

(6) the term "Maintenance and Operation Fund" means the Public Safety Interoperable Broadband Network Maintenance and Operation Fund established under section 202(a)(2);

(7) the term "NTIA" means the National Telecommunications and Information Administration;

(8) the term "public safety entity" means an entity that provides public safety services, including a State, municipality, or locality;

(9) the term "public safety services" has the same meaning as in section 337(f) of the Communications Act of 1934 (47 U.S.C. 337(f)); and

(10) the term "Secretary" means the Secretary of Homeland Security.

SEC. 202. FUNDING.

(a) ESTABLISHMENT OF FUNDS.—

(1) CONSTRUCTION FUND.—

(A) ESTABLISHMENT.—There is established in the Treasury of the United States a fund to be known as the "Public Safety Interoperable Broadband Network Construction Fund".

(B) PURPOSE.—The Secretary shall establish and administer the grant program under section 203 using the funds deposited in the Construction Fund.

(C) CREDIT.—

(i) BORROWING AUTHORITY.—The Secretary may borrow from the general fund of the Treasury beginning on October 1, 2011, such sums as may be necessary, but not to exceed $2,000,000,000, to implement section 203.

(ii) REIMBURSEMENT.—The Secretary of the Treasury shall reimburse the general fund of the Treasury, without interest, for any amounts borrowed nnder clause (i) as funds are deposited into the Construction Fund, but in no case later than December 31, 2014.

(2) MAINTENANCE AND OPERATION FUND.—

(A) ESTABLISHMENT.—There is established in the Treasury of the United States a fund to be known as the "Public Safety Interoperable Broadband Network Maintenance and Operation Fund".

(B) PURPOSE.—The Secretary shall use the funds deposited in the Maintenance and Operation Fund to carry out section 204.

(b) INITIAL DISTRIBUTION OF AUCTION PROCEEDS IN FUNDS.—Notwithstanding subparagraphs (A) and (D) of section 309(j)(8) of the Communications Act of 1934 (47 U.S.C. 309(j)(8)), the Secretary of the Treasury shall deposit the proceeds (including deposits and up front payments from successful bidders) from the auction of the spectrum described in section 206 in the following manner:

(1) All proceeds less than or equal to $5,500,000,000 shall be deposited in the Construction Fund and shall be made available to the Secretary without further appropriations.

(2) All proceeds exceeding $5,500,000,000 but not more than $11,000,000,000 shall be deposited in the Maintenance and Operation Fund and shall be made available to the Secretary without further appropriations.

(3) Any proceeds in excess of $11,000,000,000 shall be deposited in the General Fund of the Treasury, where such amounts shall be dedicated for the sole purpose of deficit reduction.

(c) TRANSFER OF FUNDS AT COMPLETION OF CONSTRUCTION.—The Secretary of the Treasury shall transfer to the Maintenance and Operation Fund any funds remaining in the Construction Fund after the date of the completion of the construction phase of the nationwide public safety interoperable broadband network to be established under section 203, as such completion date is determined by the Secretary.

(d) TRANSFER OF FUNDS TO TREASURY.—Any funds remaining in the Maintenance and Operation Fund after the end of the 10-year period following the determination by the Secretary that construction of the nationwide public safety interoperable broadband network to be established under section 203 has been completed shall be transferred to the General Fund of the Treasury, where such amounts shall be dedicated for the sole purpose of deficit reduction.

(e) AUTHORIZATION OF APPROPRIATIONS.—

(1) CONSTRUCTION FUND.—There are authorized to be appropriated to the Secretary for deposit in the Construction Fund in and after fiscal year

2012 a total amount not to exceed $5,500,000,000 minus any amounts equal to the amount deposited in the Construction Fund pursuant to subsection (b)(1).

(2) MAINTENANCE AND OPERATION FUND.—There are authorized to be appropriated to the Secretary for deposit in the Maintenance and Operation Fund in and after fiscal year 2012 a total amount not to exceed $5,500,000,000 minus any amounts equal to the amount deposited in the Maintenance and Operation Fund pursuant to subsection (b)(2).

SEC. 203. PUBLIC SAFETY INTEROPERABLE BROADBAND NETWORK CONSTRUCTION.

(a) ESTABLISHMENT OF CONSTRUCTION GRANT PROGRAM.—The Secretary shall take such action as is necessary to establish a grant program to assist States, municipalities, and Indian tribes to establish a nationwide public safety interoperable broadband network in the 700 MHz band.

(b) PROJECTS.—The projects for which construction grants may be made under this section are the following:

(1) Construction of a new public safety interoperable broadband network using public safety infrastructure in the 700 MHz band.

(2) Improvement of the existing public safety networks and construction of new infrastructure to meet public safety requirements in the 700 MHz band, the 800 MHz band, or the 4.9 GHz band.

(3) Migration of public safety entity use to the 700 MHz band.

(c) MATCHING REQUIREMENTS.—

(1) FEDERAL SHARE.—The Federal share of the cost of carrying out a project under this section may not exceed 80 percent of the eligible costs of carrying out a project, as determined by the Secretary in consultation with the Chairman of the Commission.

(2) NON-FEDERAL SHARE.—The non-Federal share of the cost of carrying out a project under this section may be provided through an in-kind contribution.

(d) REQUIREMENTS.—Not later than 1 year after the date of enactment of this Act, the Secretary shall establish requirements for the grant program established under this section, including the following:

(1) Defining eligible costs for purposes of subsection (c)(1).

(2) Determining the scope of network infrastructure eligible for grant funding under this section.

(3) Conditioning grant funding on compliance with the licensing terms of the Commission.

(4) Ensuring that all grant funds are in compliance and support the goals of the National Emergency Communications Plan and the Statewide Communication Interoperability Plans for each State and territory.

(e) TECHNICAL ASSISTANCE.—The Secretary shall enhance the Office of Emergency Communications Technical Assistance Program to assist recipients of grant amounts under this section with best practices and guidance in implementing projects for which the recipient received a construction grant under this section.

SEC. 204. PUBLIC SAFETY INTEROPERABLE BROADBAND MAINTENANCE AND OPERATION.

(a) MAINTENANCE AND OPERATION REIMBURSEMENT PROGRAM.—The Secretary shall administer a program through which not more than 50 percent of maintenance and operational expenses associated with the public safety interoperable broadband network may be reimbursed from the Maintenance and Operation Fund for those expenses that are attributable to the maintenance, operation, and improvement of the public safety interoperable broadband network.

(b) REPORT.—Not later than 7 years after the commencement of the reimbursement program established under subsection (a), the Secretary shall submit to the appropriate committees of Congress a report on whether to continne to provide funding for the Maintenance and Operation Fund following completion of the period provided for nnder section 202(d).

SEC. 205. AUDITS.

(a) IN GENERAL.—Not later than 3 years after the date of enactment of this Act, and every 3 years thereafter, the Comptroller General of the United States shall perform an audit of the financial statements, records, and accounts of the—

(1) Construction Fund established under section 202(a)(1);

(2) Maintenance and Operation Fund established under section 202(a)(2);

(3) construction grant program established under section 203; and

(4) maintenance and operation grant program established under section 204.

(b) GAAP.—Each audit required under subsection (a) shall be conducted in accordance with generally acceptable accounting procedures.

(c) REPORT TO CONGRESS.—A copy of each audit required under subsection (a) shall be submitted to the appropriate committees of Congress.

SEC. 206. AUCTION OF SPECTRUM TO FUND THE CONSTRUCTION AND MAINTENANCE AND OPERATION FUNDS.

(a) IDENTIFICATION OF SPECTRUM.—Not later than 1 year after the date of enactment of this Act, the Assistant Secretary shall identify, at a minimum, 15 megahertz of contiguous spectrum at frequencies located between 1675 megahertz and 1710 megahertz, inclusive, to be made available for immediate reallocation.

(b) AUCTION.—Not later than January 31, 2014, the Commission shall conduct the auction of the following licenses, by commencing the bidding for:

(1) The spectrum between the frequencies of 1915 megahertz and 1920 megahertz, inclusive.

(2) The spectrum between the frequencies of 1995 megahertz and 2000 megahertz, inclusive.

(3) The spectrum between the frequencies of 2020 megahertz and 2025 megahertz, inclusive.

(4) The spectrum between the frequencies of 2175 megahertz and 2180 megahertz, inclusive.

(5) The spectrum between the frequencies of 2155 megahertz and 2175 megahertz, inclusive.

(6) The spectrum between the frequencies of 1755 megahertz and 1850 megahertz, inclusive.

(7) The spectrum identified pursuant to subsection (a).

(c) EXTENSION OF AUCTION AUTHORITY.—Section 309(j)(11) of the Communications Act of 1934 (47 U.S.C. 309(j)(11)) is amended by striking "2012" and inserting "2020".

(d) ELIGIBILITY.—The Commission shall eusure that no bidder is deemed ineligible for or otherwise excluded from an auction specified in this Act, or any other competitive bidding process under section 309(j) of the Communications Act of 1934, on accouut of its size or amount of its other spectrum holdings.

SEC. 207. ACHIEVING LONG-TERM INTEROPERABILITY AND EFFICIENT USE OF PUBLIC SAFETY SPECTRUM.

(a) MANDATING MIGRATION OF FEDERAL LAW ENFORCEMENT.—Not later than 10 years after the date of enactment of this Act, each Federal law enforcement agency shall move all of their communications not being carried on commercial networks to spectrum located in the 700 MHz and 800 MHz bands.

(b) SPECTRUM BELOW 512 MHZ.—

(1) IN GENERAL.—Beginning on the date of enactment of this Act, the Commission shall not renew any license to use spectrum located on frequencies above 170 megahertz and below 512 megahertz granted to a public safety licensee, unless the licensee is able to demonstrate—

(A) that migration to a different spectrum band will cause considerable economic hardship to the State or local government jurisdiction in which such licensee is located;

(B) migration to a different spectrum band would adversely impact the ability of the licensee to protect and serve the community in which such licensee is located; or

(C) there are an insufficient number of frequencies above the 700 MHz band to support the land-mobile communications needs of the licensee.

(2) RECOMMENDATION.—Not later than 5 years after date of enactment, the Commission, in consultation with the Secretary, the NTIA, and Federal, State, and local public safety agencies, shall

issue a recommendation to Congress on the feasibility of public safety entities ending their use of spectrum located on frequencies above 170 megahertz and below 512 megahertz, and moving all such use to the spectrum licensed to public safety services in the 700 MHz and 800 MHz bands.

(3) AVAILABILITY OF FUNDS.—The Secretary may make amounts available from the Maintenance and Operation Fund to facilitate the migration of public safety entity use of spectrum located on frequencies above 170 megahertz and below 512 megahertz to use of spectrum licensed to public safety services in the 700 MHz and 800 MHz bands.

(c) SPECTRUM IN THE 4.9 GHz BAND.—

(1) ELIGIBILITY FOR USE OF SPECTRUM.—The Commission shall modify section 90.1203(b) of subpart Y or part 90 of the Code of Federal Regulations (47 C.F.R. 90.1203(b)) (relating to eligibility of use of spectrum frequencies in the 4940–4990 MHz band) to ensure that—

(A) governmental entities providing public safety services retain primary authority to use such spectrum; and

(B) non-governmental entities may use the spectrum on a secondary basis, provided that—

(i) such secondary use does not cause harmful interference to public safety users of that spectrum;

(ii) the non-governmental entity seeking such secondary use demonstrates to the Commission that such secondary use will not cause interference to public safety users of that spectrum; and

(iii) if such secondary use causes any interference to a public safety user, such entity shall immediately cease such use uutil such interference has been mitigated to the satisfactiou of the public safety user.

(2) FEE FOR SECONDARY USE OF SPECTRUM.—

(A) IN GENERAL.—The Commission shall charge a recurring licensing fee to each non-governmental entity for any secondary use of spectrum hy such entity described under paragraph (1).

(B) TREATMENT OF REVENUES.—Any revenues generated from the recurring licensing fee charged under subparagraph (A) shall be deposited in Maintenance and Operation Fund nutil the date identified under section 202(d), after which all such revenues shall be deposited in the General Fund of the Treasury, where such amounts shall be dedicated for the sole purpose of deficit reduction.

(d) REPORTS ON EFFICIENT USE OF PUBLIC SAFETY SPECTRUM.—

(1) GAO STUDY AND REPORT.—Not later than 3 years after the date of enactment of this Act, the Comptroller General of the United States shall conduct a study and submit a report to the appropriate committees of Congress that identifies—

(A) those parts of the radio spectrum above 174 MHz and below 512 MHz used by any public safety entity that could be returned to the Commission for auction in accordance with subsection (d); and

(B) the cost of migrating any such entity from use of the returned spectrum to use of alternative spectrum.

(2) FCC STUDY AND REPORT.—Not later than 3 years after the date of enactment of this Act, and every 3 years thereafter, the Commission shall conduct a study and submit to the appropriate committees of Congress a report—

(A) on the spectrum held by the public safety broadband licensee;

(B) on how efficiently such spectrum is being used; and

(C) that provides a recommendation for whether more spectrum needs to be made available to meet the needs of public safety entities.

SEC. 208. REPORT ON LONG-TERM INTEROPERABILITY USING IP-BASED SOLUTIONS.

Not later than 2 years after the date of enactment of this Act, the Commission, in consultation with the Secretary and the Assistant Secretary, shall issue a report and order, after allowing time for notice and comment, including comment from public safety users, and submit such report to the appropriate committees of Congress, on whether Internet Protocol-enabled solutions could aid interoperability.

○

I

112TH CONGRESS
1ST SESSION

H. R. 607

To enhance public safety by making more spectrum available to public safety agencies, to facilitate the development of a wireless public safety broadband network, to provide standards for the spectrum needs of public safety agencies, and for other purposes.

IN THE HOUSE OF REPRESENTATIVES

FEBRUARY 10, 2011

Mr. KING of New York (for himself, Mr. THOMPSON of Mississippi, Mr. ROGERS of Alabama, Ms. CLARKE of New York, Mrs. MILLER of Michigan, Mr. LONG, and Mr. GRIMM) introduced the following bill; which was referred to the Committee on Energy and Commerce

---

A BILL

To enhance public safety by making more spectrum available to public safety agencies, to facilitate the development of a wireless public safety broadband network, to provide standards for the spectrum needs of public safety agencies, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE; TABLE OF CONTENTS.

(a) SHORT TITLE.—This Act may be cited as the "Broadband for First Responders Act of 2011".

(b) TABLE OF CONTENTS.—The table of contents for this Act is as follows:

TITLE I—ALLOCATION AND ASSIGNMENT OF PUBLIC SAFETY LICENSES

SEC. 101. FINDINGS.

The Congress finds the following:

(1) The communications capabilities of first responders and other public safety agencies directly affect the public safety of the people of the United States and our national security.

(2) As events such as the terrorist attacks of September 11, 2001, and Hurricane Katrina revealed, the inability of local, State, tribal, and Fed-

eral first responders to communicate effectively during an emergency impairs operations to respond to terrorist acts and natural disasters.

(3) Many public safety communications systems rely on commercially available systems that lack broadband capabilities or otherwise fail to provide the level of service necessary to meet the mission-critical needs of public safety agencies.

(4) A wireless public safety broadband network is needed to guarantee priority access for public safety use and first responder interoperability across the United States.

(5) Allocating the paired electromagnetic spectrum bands of 758–763 megahertz and 788–793 megahertz, referred to as the D Block, to public safety agencies will fulfill public safety agencies needs for sufficient spectrum and would help reduce the complexity and future operating cost of public safety communications systems.

(6) Because the communications needs of public safety agencies may differ by geographic region (including whether they require a dedicated communications system or can rely on a system shared with commercial users), each region requires flexibility to develop a model that meets its local needs without

sacrificing the interoperability of the nationwide system.

(7) The most timely and cost-effective way to achieve nationwide interoperability in public safety communications will be to leverage commercial infrastructure without compromising the mission-critical needs of public safety ageucies.

(8) The use by public safety agencies of standardized technologies commonly employed in the commercial telecommunications sector will provide significant benefits, including improved capabilities, greater economies of scale, and more rapid adoption of technological innovations.

(9) When it is iu the interest of public safety, the Federal Communications Commission should encourage any public safety licensee or spectrum lessee to consider using existing or planned commercial infrastructure.

SEC. 102. ALLOCATION AND ASSIGNMENT OF PUBLIC SAFETY LICENSES.

(a) SPECTRUM ALLOCATION.—Section 337(a) of the Communications Act of 1934 (47 U.S.C. 337(a)) is amended—

(1) in paragraph (1), by striking "24" and inserting "34"; and

(2) in paragraph (2), by striking "36" and inserting "26".

(b) ASSIGNMENT.—Section 337(b) of the Communications Act of 1934 (47 U.S.C. 337(b)) is amended to read as follows:

"(b) ASSIGNMENT.—

"(1) IN GENERAL.—Not later than 60 days after the date of enactment of the Broadband for First Responders Act of 2011, the Commission shall allocate the paired electromagnetic spectrum bands of 758–763 megahertz and 788–793 megahertz for public safety broadband communications and shall license such paired bands to the public safety broadband licensee.

"(2) ESTABLISHMENT OF RULES.—

"(A) IN GENERAL.—The Commission shall establish rules to permit the public safety broadband licensee to authorize providers of public safety services to construct and operate a wireless public safety broadband network in the spectrum licensed to the public safety broadband licensee if the public safety broadband licensee determines that such authorization would expedite the deployment of public safety broadband communications.

"(B) NETWORK REQUIREMENTS.—The Commission shall require that any such wireless public safety broadband network shall—

"(i) be fully interoperable and remain interoperable with, and in conformance with the same broadband technology standards as, all other public safety broadband systems deployed or authorized;

"(ii) provide for roaming by local, State, tribal, and Federal governments and other authorized users of the spectrum licensed to the public safety broadband licensee;

"(iii) provide priority access to public safety agencies;

"(iv) be built to survive most large-scale disasters;

"(v) ensure that networks of such systems have the appropriate level of cyber security;

"(vi) ensure that authorized users have control over all local network uses consistent with rules established by the Commission; and "(vii) be consistent with the Statewide Interoperable Communications Plans adopted by each State and the National Emergency Communications Plan, as adopted by the Department of Homeland Security.

"(C) DEADLINES.—

"(i) RULES.—The Commission shall establish rules under this paragraph not later than 9 months after the date of enactment of the Broadband for First Responders Act of 2011.

"(ii) REPORT.—

"(I) IN GENERAL.—Not later than 60 days after the date of enactment of the Broadband for First Responders Act of 2011, the public safety broadband licensee shall submit a report to the appropriate committees of Congress on the phased network deployment plan of such spectrum bands.

"(II) DEFINITIONS.—For purposes of subclause (I), the term 'appropriate committees of Congress' means—

"(aa) the Committee on Homeland Security and Governmental Affairs of the Senate;

"(bb) the Committee on Commerce, Science, and Transportation of the Senate;

"(cc) the Committee on Energy and Commerce of the House of Representatives; and

"(dd) the Committee on Homeland Security of the House of Representatives.".

(c) NETWORK-SHARING AGREEMENTS.—Section 337 of the Communications Act of 1934 (47 U.S.C. 337) is amended—

(1) by redesignating subsection (f) as subsection (g); and

(2) by inserting after subsection (e) the following:

"(f) RULEMAKING REQUIRED.—The Commission shall establish regulations to—

"(1) authorize the shared use of the public safety broadband spectrum and network infrastructure by entities that are not defined as public safety services in subsection (g)(1), subject to the requirement that public safety services retain priority access to the spectrum, pursuant to procedures adopted by the Commission, so long as the needs of other governmental entities needs are considered before commercial entities; and

"(2) allow use of the public safety broadband spectrum by emergency response providers, as defined in section 2 of the Homeland Security Act of 2002 (6 U.S.C. 101).".

(d) DEFINITION.—Section 337(g) of the Communications Act of 1934 (as so redesignated) is amended—

(1) by redesignating paragraphs (1) and (2) as paragraphs (3) and (4), respectively; and

(2) by inserting before paragraph (3), as so redesignated, the following:

"(1) PUBLIC SAFETY BROADBAND LICENSEE.—The term 'public safety broadband licensee' means a licensee as defined by the Commission in its Second Report and Order adopted July 31, 2007 (FCC 07–132), and selected in the Commission's Order adopted November 19, 2007 (FCC 07–199), by the Commission to be the licensee for spectrum between 763–768 and 793–798 megahertz.

"(2) PUBLIC SAFETY BROADBAND SPECTRUM.—The term 'public safety broadband spectrum' means the electromagnetic spectrum between 758 megahertz and 768 megahertz, inclusive, and 788 megahertz and 798 megahertz, inclusive, and any additional electromagnetic frequencies allocated by the Commission for public safety broadband use.".

SEC. 103. STANDARDS.

(a) INTEROPERABILITY REQUIREMENTS.—Not later than 180 days after the date of enactment of this Act, the Chairman of the Federal Communications Commission, in consultation with the Director of the National Institute of Standards and Technology, the Secretary of Homeland Security, the Attorney General, and local, State, tribal, and Federal public safety agencies, shall develop a public safety agency statement of requirements that enables nationwide interoperability and roaming across any communications system using public safety broadband spectrum, as defined in section 337(g) of the Communications Act of 1934.

(b) SPECIFICATIONS.—The Secretary of Homeland Security, in coordination with the Director of the National Institute of Standards and Technology, shall establish an appropriate standard, or set of standards, for meeting the public safety agency statement requirements developed under subsection (a), taking into consideration—

(1) the extent to which particular technologies and user equipment are, or are likely to be, available in the commercial marketplace;

(2) the availability of necessary technologies and equipment on reasonable and nondiscriminatory licensing terms;

(3) the ability to evolve with technological developments in the commercial marketplace;

(4) the ability to accommodate prioritization for public safety transmissions;

(5) the ability to accommodate appropriate security measures for public safety transmissions; and

(6) any other considerations the Federal Communications Commission deems appropriate.

SEC. 104. RULE OF CONSTRUCTION.

Nothing in this Act, or the amendments made by this Act, shall be construed to overturn, supersede, or otherwise preempt the Federal Communication Commission's Order adopted on November 19, 2007 (FCC 07–199), setting forth the roles and responsibilities of the public safety broadband licensee (as such term is defined in section 337(g) of the Communications Act of 1934) and the Federal Communications Commission, except that the following may, by rule or order, be modified by the Commission:

(1) Any organization seeking membership to the board of directors of the public safety broadband licensee may be voted in by a simple majority of the then serving members of the Board of Directors.

(2) The Board of Directors of the Public Safety Broadband Licensee shall include the following organizations:

(A) International Association of Chiefs of Police.

(B) International Association of Fire Chiefs.

(C) National Sheriffs' Association.

(D) International Association of Fire Fighters.

(E) National Volunteer Fire Council.

(F) Fraternal Order of Police.

(G) Major Cities Chiefs Association.

(H) Metropolitan Fire Chiefs Association.

(I) Major County Sheriffs' Association.

(J) Association of Public-Safety Communications Officials, International.

(K) National Emergency Management Association.

(L) International Association of Emergency Managers.

(M) Police Executive Research Forum.

(N) National Criminal Justice Association.

(O) National Association of Police Organizations.

(P) National Organization of Black Law Enforcement Executives.

(Q) Association of Air Medical Services.

(R) Advocates for Emergency Medical Services.

(S) Emergency Nurses Association.

(T) National Association of Emergency Medical Services Physicians.

(U) National Association of Emergency Medical Technicians.

(V) National Association of State Emergency Medical Service Officials.

(W) National Emergency Medical Services Management Association.

(X) International Municipal Signal Association.

(Y) American Probation and Parole Association.

(Z) National Governors Association.

(AA) National Association of Counties.

(BB) National League of Cities.

(CC) United States Conference of Mayors.

(DD) Council of State Governments.

(EE) International City/County Managers Association.

(FF) National Conference of State Legislatures.

(GG) National Association of Regional Councils.

(HH) Utilities Telecom Council.

(II) American Association of State Highway Transportation Officials.

(JJ) American Hospital Association.

(KK) Forestry Conservation Communications Association.

(LL) National Association of State 911 Administrators.

(MM) National Troopers Coalition.

(NN) National Emergency Numbers Association.

TITLE II—FUNDING

SEC. 201. DEFINITIONS.

In this title—

(1) the term "Assistant Secretary" means the Assistant Secretary of Commerce for Communications and Information;

(2) the term "appropriate committees of Congress" means—

(A) the Committee on Homeland Security and Governmental Affairs of the Senate;

(B) the Committee on Commerce, Science, and Transportation of the Senate;

(C) the Committee on Energy and Commerce of the House of Representatives; and

(D) the Committee on Homeland Security of the House of Representatives;

(3) the term "Construction Fund" means the Public Safety Interoperable Broadband Network Construction Fund established under section 202;

(4) the term "Maintenance and Operation Fund" means the Public Safety Interoperable Broadband Network Maintenance and Operation Fund established under section 202; and

(5) the term "Secretary" means the Secretary of Homeland Security.

SEC. 202. FUNDING.

(a) ESTABLISHMENT OF FUNDS.—

(1) CONSTRUCTION FUND.—

(A) ESTABLISHMENT.—There is established in the Treasury of the United States a fund to be known as the Public Safety Interoperable Broadband Network Construction Fund.

(B) PURPOSE.—The Secretary shall establish and administer the grant program under section 203 using the funds deposited in the Construction Fund.

(C) CREDIT.—

(i) BORROWING AUTHORITY.—The Secretary may borrow from the general fund of the Treasury beginning October 1, 2011, such sums as may be necessary, but not to exceed $2,000,000,000, to implement section 203.

(ii) REIMBURSEMENT.—The Secretary of the Treasury shall reimburse the general fund of the Treasury, without interest, for any amounts borrowed under clause (i) as funds are deposited into the Construction Fund, but in no case later than December 31, 2014.

(2) MAINTENANCE AND OPERATION FUND.—

(A) ESTABLISHMENT.—There is established in the Treasury of the United States a fund to be known as the Public Safety Interoperable Broadband Network Maintenance and Operation Fund.

(B) PURPOSE.—The Secretary shall use the funds deposited in the Maintenance and Operation Fund to carry out section 204.

(b) INITIAL DISTRIBUTION OF AUCTION PROCEEDS IN FUNDS.—Notwithstanding subparagraphs (A) and (D) of section 309(j)(8) of the Communications Act of 1934 (47 U.S.C. 309(j)(8)), the Secretary of the Treasury shall deposit the proceeds (including deposits and upfront payments from successful bidders) from the auction of the spectrum described in section 205 in the following manner:

(1) All proceeds less than or equal to $5,500,000,000 shall be deposited in the Construction Fund and shall be made available to the Secretary without further appropriations.

(2) Any proceeds exceeding $5,500,000,000 shall be deposited in the Maintenance and Operation Fund and shall be made available to the Secretary without further appropriations.

(c) TRANSFER OF FUNDS AT COMPLETION OF CONSTRUCTION.—The Secretary of the Treasury shall transfer to the Maintenance and Operation Fund any funds remaining in the Construction Fund after the date of the completion of the construction phase, as determined by the Secretary.

(d) TRANSFER OF FUNDS TO TREASURY.—The Secretary of the Treasury shall transfer to the general fund of the Treasury any funds remaining in the Maintenance and Operation Fund after the end of the 10-year period following receipt of notice by the Secretary of Homeland Security that construction of the nationwide system has been completed.

(e) AUTHORIZATION OF APPROPRIATIONS.—

(1) CONSTRUCTION FUND.—There are authorized to be appropriated to the Secretary for deposit in the Construction Fund in and after fiscal year 2012 an amount not to exceed the amount set forth in paragraph (3).

(2) MAINTENANCE AND OPERATION FUND.—There are authorized to be appropriated to the Secretary for deposit in the Maintenance and Operation Fund in and after fiscal year 2012 an amount not to exceed the amount set forth in paragraph (3).

(3) LIMITATION.—The authorization of appropriations under paragraphs (1) and (2) may not exceed a total of $5,500,000,000.

SEC. 203. PUBLIC SAFETY INTEROPERABLE BROADBAND NETWORK CONSTRUCTION.

(a) CONSTRUCTION GRANT PROGRAM ESTABLISHMENT.—The Secretary shall take such action as is necessary to establish a grant program to assist public safety entities to establish a nationwide public safety interoperable broadband network in the 700 megahertz band.

(b) PROJECTS.—The projects for which construction grants may be made under this section are the following:

(1) Construction of a new public safety interoperable broadband network using public safety infrastructure or commercial infrastructure, or both, in the 700 megahertz band.

(2) Improvement of the existing public safety and commercial networks and construction of new infrastructure to meet public safety requirements.

(c) MATCHING REQUIREMENTS.—

(1) FEDERAL SHARE.—The Federal share of the cost of carrying out a project under this section may not exceed 80 percent of the eligible costs of carrying out a project, as determined by the Sec-

retary in consultation with the Chairman of the Federal Communications Commission.

(2) NON-FEDERAL SHARE.—The non-Federal share of the cost of carrying out a project under this section may be provided through an in-kind contribution.

(d) REQUIREMENTS.—Not later than 6 months after the date of enactment of this Act, the Secretary shall establish grant program requirements including the following:

(1) Defining entities that are eligible to receive a grant under this section.

(2) Defining eligible costs for purposes of subsection (c)(1).

(3) Determining the scope of network infrastructure eligible for grant funding under this section.

(4) Conditioning grant funding on compliance with the Federal Communications Commission's license terms.

(5) Ensuring that all grant funds are in compliance with and support the goals of the National Emergency Communications Plan and the Statewide Communication Interoperability Plans for each State and territory.

(e) TECHNICAL ASSISTANCE.—The Secretary will enhance the Office of Emergency Communications Technical Assistance Program to assist grantees with best practices and guidance in implementing these projects.

SEC. 204. PUBLIC SAFETY INTEROPERABLE BROADBAND MAINTENANCE AND OPERATION.

(a) MAINTENANCE AND OPERATION REIMBURSEMENT PROGRAM.—The Secretary shall administer a program through which not more than 50 percent of maintenance and operational expenses associated with the public safety interoperable broadband network may be reimbursed from the Maintenance and Operation Fund for those expenses that are attributable to the maintenance, operation, and improvement of the public safety interoperable broadband network.

(b) REPORT.—Not later than 7 years after the commencement of the reimbursement program established under subsection (a), the Secretary shall submit to Congress a report on whether to continue to provide funding for the Maintenance and Operation Fund following completion of the period provided for under section 202(d).

SEC. 205. AUDITS.

(a) IN GENERAL.—Not later than 3 years after the date of enactment of this Act, and every 3 years thereafter, the Comptroller General of the United States shall perform an audit of the financial statements, records, and accounts of the—

(1) Public Safety Interoperable Broadband Network Construction Fund established under section 202(a)(1);

(2) Public Safety Interoperable Broadband Network Maintenance and Operation Fund established under section 202(a)(2);

(3) construction grant program established under section 203; and

(4) maintenance and operation grant program established under sectiou 204.

(b) GAAP.—Each audit required uuder subsection (a) shall be conducted iu accordance with generally accepted accounting procedures.

(c) REPORT TO CONGRESS.—A copy of each audit required under subsection (a) shall be submitted to the appropriate committees of Congress.

SEC. 206. AUCTION OF SPECTRUM TO FUND THE INTEROPERABLE BROADBAND NETWORK CONSTRUCTION FUND, AND THE OPERATION AND MAINTENANCE FUND.

(a) IN GENERAL.—

(1) REALLOCATION OF SPECTRUM.—Not later than 1 year after the date of enactment of this Act,

the Assistant Secretary shall reallocate for commercial use electromagnetic spectrum at 1755–1780 megahertz.

(2) AUCTION.—Not later than 18 months after the date of enactment of this Act, the Federal Communications Commission shall establish rules for pairing electromagnetic spectrum bands at 1755–1780 megahertz and 2155–2180 megahertz, inclusive, and auction the licenses for such paired spectrum in accordance of section 309(j).

SEC. 207. ACHIEVING LONG-TERM INTEROPERABILITY BY CONSOLIDATING BAND USE BY PUBLIC SAFETY AGENCIES.

(a) MANDATING MIGRATION OF PUBLIC SAFETY ENTITIES AND FEDERAL LAW ENFORCEMENT.—

(1) REQUIRE MIGRATION BY PUBLIC SAFETY ENTITIES.—Not later than 8 years after the date of enactment of the Act, each public safety entities shall end their use of radio spectrum above 420 megahertz and below 512 megahertz and begin to use alternative radio spectrum licensed to public safety services in the 700 megahertz and 800 megahertz bands.

(2) REQUIRE USE BY FEDERAL LAW ENFORCEMENT.—Not later than 10 years after the date of

enactment of this Act, each Federal law enforcement agency shall move all of their communications, not being carried on commercial networks, to spectrum located in the 700 megahertz and 800 megahertz bands.

(b) GAO STUDY.—Not later than 3 years after the date of enactment of this Act, the Comptroller General of the United States shall conduct a study and submit a report to the appropriate committees of Congress that identifies those parts of the radio spectrum above 174 megahertz and below 512 megahertz used by public safety entities that should be returned to the Federal Communications Commission for auction in accordance with subsection (d).

(c) MIGRATION PLAN DEVELOPED BY FCC AND DHS.—

(1) IN GENERAL.—Not later than 6 years after the date of enactment of this Act, the Federal Communications Commission, in consultation with the Secretary, the Assistant Secretary, and Federal, State and local pnblic safety agencies, shall issue a report, detailing the plan for public safety entities to end their use of radio spectrum above 170 megahertz and below 512 megahertz and move all use to

the radio spectrum licensed to public safety services, in the 700 megahertz and 800 megahertz bands.

(2) FACILITATION OF MIGRATION.—The Secretary shall make amounts available out of the maintenance and operation grant program established under section 204 to facilitate the migration of public safety entity use of the radio spectrum licensed to public safety services in the 700 megahertz and 800 megahertz bands in accordance with the plan developed under paragraph (1).

(d) RECOVERED PUBLIC SAFETY SPECTRUM.—

(1) AUCTION.—Not later than 10 years after the date of enactment of this Act, the paired electromagnetic spectrum bands of 420–440 megahertz and 450–470 megahertz recovered as a result of the report and order required under subsection (c) shall be auctioned off by the Federal Communications Commission through a system of competitive bidding meeting the requirements of section 309 of the Communications Act of 1934.

(2) ENCOURAGED USE OF CERTAIN AUTHORITY.—In making the recovered spectrum identified under paragraph (1) available through auction, the Commission is encouraged to use its authority under sections 303 and 316 of the Act to configure the

spectrum in a manner that increases the value of the recovered spectrum for commercial use.

(3) PROCEEDS.—Notwithstanding any other provision of law, all proceeds (including deposits and upfront payments from successful bidders) from the auction required under this subsection shall be deposited in the Treasury in accordance with chapter 33 of title 31, United States Code.

SEC. 208. EXTENSION OF AUCTION AUTHORITY AND ASSURANCE OF OPEN AUCTIONS.

(a) EXTENSION OF AUCTION AUTHORITY.—Section 309(j)(11) of the Communications Act of 1934 (47 U.S.C. 309(j)(11)) is amended by striking "2012" and inserting "2020".

(b) ELIGIBILITY.—The Commission shall ensure that no bidder is deemed ineligible for or otherwise excluded from an auction specified in this Act, or any other competitive bidding process under section 309(j) of the Communications Act, on account of its size or amount of its other spectrum holdings.

SEC. 209. REPORT ON EFFICIENT USE OF PUBLIC SAFETY SPECTRUM.

Not later than 3 years after the date of enactment of this Act and every 3 years thereafter, the Federal Communications Commission shall conduct a study and submit to the appropriate committees of Congress a report—

(1) on the spectrum held by the public safety broadband licensee;

(2) on how efficiently such spectrum is being used; and

(3) that provide a recommendation for whether more spectrum needs to be made available to meet the needs of public safety entities.

SEC. 210. REPORT ON LONG-TERM INTEROPERABILITY USING IP-BASED SOLUTIONS.

Not later than 2 years after the date of enactment of this Act, the Federal Communications Commission, in consultation with the Secretary of Homeland Security and the Assistant Secretary, shall issue a report and order, after allowing time for notice and comment, including comment from public safety users, aud submit such report the appropriate committees of Congress, on whether Internet Protocol-enabled solutions could aid interoperability.

○

112TH CONGRESS
1ST SESSION

H. R. 2482

To establish the sense of Congress that Congress should enact, and the President should sign, bipartisan legislation to strengthen public safety and to enhance wireless communications, and for other purposes.

IN THE HOUSE OF REPRESENTATIVES

JULY 11, 2011

Mr. DINGELL (for himself and Mr. GENE GREEN of Texas) introduced the following bill; which was referred to the Committee on Energy and Commerce, and in addition to the Committees on Science, Space, and Technology and Armed Services, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned

---

A BILL

To establish the sense of Congress that Congress should enact, and the President should sign, bipartisan legislation to strengthen public safety and to enhance wireless communications, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE; TABLE OF CONTENTS.

(a) SHORT TITLE.—This Act may be cited as the "Public Safety Spectrum and Wireless Innovation Act".

(b) TABLE OF CONTENTS.—The table of contents for this Act is as follows:

SEC. 2. DEFINITIONS.

In this Act, the following definitions shall apply:

(1) 700 MHZ BAND.—The term "700 MHz band" means the portion of the electromagnetic spectrum between the frequencies from 698 megahertz to 806 megahertz.

(2) 700 MHZ D BLOCK SPECTRUM.—The term "700 MHz D block spectrum" means the portion of the electromagnetic spectrum between the fre-

quencies from 758 megahertz to 763 megahertz and between the frequencies from 788 megahertz to 793 megahertz.

(3) APPROPRIATE COMMITTEES OF CONGRESS.—Except as otherwise specifically provided, the term "appropriate committees of Congress" means—

(A) the Committee on Commerce, Science, and Transportation of the Senate; and

(B) the Committee on Energy and Commerce of the House of Representatives.

(4) ASSISTANT SECRETARY.—The term "Assistant Secretary" means the Assistant Secretary of Commerce for Communications and Information.

(5) COMMISSION.—The term "Commission" means the Federal Communications Commission.

(6) CORPORATION.—The term "Corporation" means the Public Safety Broadband Corporation established under subtitle A of title II.

(7) EXISTING PUBLIC SAFETY BROADBAND SPECTRUM.—The term "existing public safety broadband spectrum" means the portion of the electromagnetic spectrum between the frequencies—

(A) from 763 megahertz to 768 megahertz;

(B) from 793 megahertz to 798 megahertz;

(C) from 768 megahertz to 769 megahertz; and

(D) from 798 megahertz to 799 megahertz.

(8) FEDERAL ENTITY.—The term "Federal entity" has the same meaning as in section 113(i) of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 923(i)).

(9) NARROWBAND SPECTRUM.—The term "narrowband spectrum" means the portion of the electromagnetic spectrum between the frequencies from 769 megahertz to 775 megahertz and between the frequencies from 799 megahertz to 805 megahertz.

(10) NIST.—The term "NIST" means the National Institute of Standards and Technology.

(11) NTIA.—The term "NTIA" means the National Telecommunications and Information Administration.

(12) PUBLIC SAFETY ENTITY.—The term "public safety entity" means an entity that provides public safety services.

(13) PUBLIC SAFETY SERVICES.—The term "public safety services"—

(A) has the meaning given the term in section 337(f) of the Communications Act of 1934 (47 U.S.C. 337(f)); and

(B) includes services provided by emergency response providers, as that term is defined in section 2 of the Homeland Security Act of 2002 (6 U.S.C. 101).

TITLE I—REALLOCATION OF PUBLIC SAFETY SPECTRUM

SEC. 101. REALLOCATION OF D BLOCK TO PUBLIC SAFETY.

(a) IN GENERAL.—The Commission shall reallocate the 700 MHz D block spectrum for use by public safety entities in accordance with the provisions of this Act.

(b) SPECTRUM ALLOCATION.—Section 337(a) of the Communications Act of 1934 (47 U.S.C. 337(a)) is amended—

(1) by striking "24" in paragraph (1) and inserting "34"; and

(2) by striking "36" in paragraph (2) and inserting "26".

SEC. 102. FLEXIBLE USE OF NARROWBAND SPECTRUM.

The Commission may allow the narrowband spectrum to be used in a flexible manner, including usage for public safety broadband communications, subject to such technical and interference protection measures as the Commission may require.

TITLE II—GOVERNANCE OF PUBLIC SAFETY SPECTRUM

Subtitle A—Public Safety Broadband Corporation

SEC. 201. SINGLE PUBLIC SAFETY WIRELESS NETWORK LICENSEE.

(a) REALLOCATION AND GRANT OF LICENSE.—Notwithstanding any other provision of law, and subject to the provisions of this Act, the Commission shall reallocate and grant a license to the Public Safety Broadband Corporation established under section 202 for the use of the 700 MHz D block spectrum and existing public safety broadband spectrum.

(b) TERM OF LICENSE.—

(1) INITIAL LICENSE.—The license granted under subsection (a) shall be for an initial term of 10 years from the date of the initial issuance of the license.

(2) RENEWAL OF LICENSE.—Prior to expiration of the term of the initial license granted under subsection (a) or the expiration of any subsequent renewal of such license, the Corporation shall submit

to the Commission an application for the renewal of such license. Such renewal application shall demonstrate that, during the preceding license term, the Corporation has met the duties and obligations set forth under this Act. A renewal license granted under this paragraph shall be for a term of not to exceed 10 years.

(c) FACILITATION OF TRANSITION.—The Commission shall take all actions necessary to facilitate the transition of the existing public safety broadband spectrum to the Public Safety Broadband Corporation established under section 202.

SEC. 202. ESTABLISHMENT OF PUBLIC SAFETY BROADBAND CORPORATION.

(a) ESTABLISHMENT.—There is authorized to be established a private, nonprofit corporation, to be known as the "Public Safety Broadband Corporation", which is neither an agency nor establishment of the United States Government or the District of Columbia Government.

(b) APPLICATION OF PROVISIONS.—The Corporation shall be subject to the provisions of this Act, and, to the extent consistent with this Act, to the District of Columbia Nonprofit Corporation Act (sec. 29–301.01 et seq., D.C. Official Code).

(c) RESIDENCE.—The Corporation shall have its place of business in the District of Columbia and shall be considered, for purposes of venue in civil actions, to be a resident of the District of Columbia.

(d) POWERS UNDER DC ACT.—In order to carry out the duties and activities of the Corporation, the Corporation shall have the usual powers conferred upon a nonprofit corporation by the District of Columbia Nonprofit Corporation Act.

(e) INCORPORATION.—The members of the initial Board of Directors of the Corporation shall serve as incorporators and shall take whatever steps that are necessary to establish the Corporation under the District of Columbia Nonprofit Corporation Act.

SEC. 203. BOARD OF DIRECTORS OF THE CORPORATION.

(a) MEMBERSHIP.—The management of the Corporation shall be vested in a Board of Directors (referred to in this subtitle as the "Board"), which shall consist of the following members:

(1) FEDERAL MEMBERS.—The following individuals, or their respective designees, shall serve as Federal members:

(A) The Secretary of Commerce.

(B) The Secretary of Homeland Security.

(C) The Attorney General of the United States.

(D) The Director of the Office of Management and Budget.

(2) NON-FEDERAL MEMBERS.—

(A) IN GENERAL.—The Secretary of Commerce shall appoint 11 individuals to serve as non-Federal members of the Board.

(B) STATE AND LOCAL INTERESTS TO BE REPRESENTED.—In making appointments under subparagraph (A), the Secretary of Commerce, in consnltation with the Secretary of Homeland Security and the Attorney General of the United States, should—

(i) appoint at least 3 individnals to represent the collective interests of the States, localities, tribes, and territories;

(ii) seek to ensure geographic and regional representation of the United States in such appointments; and

(iii) seek to ensure rural and urban representation in such appointments.

(C) PUBLIC SAFETY INTERESTS TO BE REPRESENTED.—In making appointments under subparagraph (A), the Secretary of Commerce should appoint at least 3 individuals who have served or are currently serving as public safety professionals.

(D) REQUIRED QUALIFICATIONS.—

(i) IN GENERAL.—Each non-Federal member appointed under subparagraph (A) should meet at least 1 of the following criteria:

(I) PUBLIC SAFETY EXPERIENCE.—Knowledge and experience in the use of Federal, State, local, or tribal public safety or emergency response.

(II) TECHNICAL EXPERTISE.—Technical expertise and fluency regarding broadband communications, including public safety communications.

(III) NETWORK EXPERTISE.—Expertise in building, deploying, and operating commercial telecommunications networks.

(IV) FINANCIAL EXPERTISE.—Expertise in financing and funding telecommunications networks.

(ii) EXPERTISE TO BE REPRESENTED.—In making appointments under subparagraph (A), the Secretary of Commerce shall appoint—

(I) at least one individual who satisfies the requirement under subclause (II) of clause (i);

(II) at least one individual who satisfies the requirement under subclause (III) of clause (i); and

(III) at least one individual who satisfies the requirement under subclause (IV) of clause (i).

(E) INDEPENDENCE.—

(i) IN GENERAL.—Each non-Federal member of the Board shall be independent and neutral.

(ii) INDEPENDENCE DETERMINATION.—In order to be considered independent for purposes of this subparagraph, a member of the Board—

(I) may not, other than in his or her capacity as a member of the Board or any committee thereof—

(aa) accept any consulting, advisory, or other compensatory fee from the Corporation; or

(bb) be a person associated with the Corporation or with any affiliated company thereof; and

(II) shall be disqualified from any deliberation involving any transaction of the Corporation in which the Board member has a financial interest in the outcome of the transaction.

(F) NOT OFFICERS OR EMPLOYEES.—The non-Federal members of the Board shall not, by reason of such membership, be considered to be officers or employees of the United States Government or of the District of Columbia Government.

(G) CITIZENSHIP.—No individual other than a citizen of the United States may serve as a non-Federal member of the Board.

(b) TERMS OF APPOINTMENT.—

(1) INITIAL APPOINTMENT DEADLINE.—Members of the Board shall be appointed not later than 180 days after the date of the enactment of this Act.

(2) TERMS.—

(A) LENGTH.—

(i) FEDERAL MEMBERS.—Each Federal member of the Board shall serve as a member of the Board for the life of the Corporation.

(ii) NON-FEDERAL MEMBERS.—The term of office of each non-Federal member of the Board shall be 3 years. No non-Federal member of the Board may serve more than 2 consecutive full 3-year terms.

(B) EXPIRATION OF TERM.—Any member whose term has expired may serve until such member's successor has taken office, or until the end of the calendar year in which such member's term has expired, whichever is earlier.

(C) APPOINTMENT TO FILL VACANCY.—Any non-Federal member appointed to fill a vacancy occurring prior to the expiration of the term for which that member's predecessor was appointed shall be appointed for the remainder of the predecessor's term.

(D) STAGGERED TERMS.—With respect to the initial non-Federal members of the Board—

(i) 4 members shall serve for a term of 3 years;

(ii) 4 members shall serve for a term of 2 years; and

(iii) 3 members shall serve for a term of 1 year.

(3) VACANCIES.—A vacancy in the membership of the Board shall not affect the Board's powers, and shall be filled in the same manner as the original member was appointed.

(c) CHAIR.—

(1) SELECTION.—The Secretary of Commerce shall select, from among the non-Federal members of the Board, an individual to serve for a 2-year term as Chair of the Board.

(2) CONSECUTIVE TERMS.—An individual may not serve for more than 2 consecutive terms as Chair of the Board.

(3) REMOVAL FOR CAUSE.—The Secretary of Commerce may remove the Chair of the Board and any non-Federal member for good cause.

(d) REMOVAL.—All members of the Board may by majority vote—

(1) remove any non-Federal member of the Board from office for conduct determined by the Board to be detrimental to the Board or Corporation; and

(2) request that the Secretary of Commerce exercise his or her authority to remove the Chair of the Board for conduct determined by the Board to be detrimental to the Board or Corporation.

(e) MEETINGS.—

(1) FREQUENCY.—The Board shall meet in accordance with the bylaws of the Corporation—

(A) at the call of the Chairperson; and

(B) not less frequently than once each quarter.

(2) TRANSPARENCY.—Meetings of the Board, including any committee of the Board, shall be open to the public. The Board may, by majority vote, close any such meeting only for the time necessary to preserve the confidentiality of commercial or financial information that is privileged or confidential, to discuss personnel matters, or to discuss legal matters affecting the Corporation, including pending or potential litigation.

(f) QUORUM.—Eight members of the Board shall constitute a quorum, including at least 6 non-Federal members of the Board.

(g) BYLAWS.—A majority of the members of the Board of Directors may amend the bylaws of the Corporation.

(h) ATTENDANCE.—Members of the Board of Directors may attend meetings of the Corporation and vote in person, via telephone conference, or via video conference.

(i) PROHIBITION ON COMPENSATION.—A member of the Board of the Corporation shall serve without pay, and shall not otherwise benefit, directly or indirectly, as a result of their service to the Corporation, but shall be allowed a per diem allowance for travel expenses, at rates authorized for an employee of an agency under subchapter I of chapter 57 of title 5, United States Code, while away from the home or regular place of business of the member in the performance of the duties of the Corporation.

SEC. 204. OFFICERS, EMPLOYEES, AND COMMITTEES OF THE CORPORATION.

(a) OFFICERS AND EMPLOYEES.—

(1) IN GENERAL.—The Corporation shall have a Chief Executive Officer, and such other officers and employees as may be named and appointed by the Board for terms and at rates of compensation fixed by the Board pursuant to this subsection. The Chief Executive Officer may name and appoint such employees as are necessary. All officers and employees shall serve at the pleasure of the Board.

(2) LIMITATION.—No individual other than a citizen of the United States may be an officer of the Corporation.

(3) NONPOLITICAL NATURE OF APPOINTMENT.—No political test or qualification shall be used in selecting, appointing, promoting, or taking other personnel actions with respect to officers, agents, or employees of the Corporation.

(4) COMPENSATION.—

(A) IN GENERAL.—The Board may hire and fix the compensation of employees hired under this subsection as may be necessary to carry out the purposes of the Corporation.

(B) APPROVAL OF COMPENSATION BY FEDERAL MEMBERS.—Notwithstanding any other provision of law, or any bylaw adopted by the Corporation, all rates of compensation, including benefit plans and salary ranges, for officers and employees of the Board, shall be jointly approved by the Federal members of the Board.

(C) LIMITATION ON OTHER COMPENSATION.—No officer or employee of the Corporation may receive any salary or other compensation (except for compensation for services on boards of directors of other organizations that do not receive funds from the Corporation, on committees of such boards, and in similar activities for such organizations) from any sources other than the Corporation for services rendered during the period of the employment of the officer or employee by the Corporation.

(5) SERVICE ON OTHER BOARDS.—Service by any officer on boards of directors of other organizations, on committees of such boards, and in similar activities for such organizations shall be subject to annual advance approval by the Board and subject to the provisions of the Corporation's Statement of Ethical Conduct.

(6) RULE OF CONSTRUCTION.—No officer or employee of the Board or of the Corporation shall be considered to be an officer or employee of the United States Government or of the government of the District of Columbia.

(b) ADVISORY COMMITTEES.—The Board—

(1) shall establish a standing public safety advisory committee to assist the Board in carrying out its duties and responsibilities under this subtitle; and

(2) may establish additional standing or ad hoc committees, panels, or councils as the Board determines are necessary.

(c) SELECTION OF AGENTS, CONSULTANTS, AND EXPERTS.—

(1) IN GENERAL.—The Board shall select parties to serve as its agents, consultants, or experts in a fair, transparent, and objective manner.

(2) BINDING AND FINAL.—If the selection of an agent, consultant, or expert satisfies the requirements under paragraph (1), the selection of that agent, consultant, or expert shall be final and binding.

SEC. 205. NONPROFIT AND NONPOLITICAL NATURE OF THE CORPORATION.

(a) STOCK.—The Corporation shall have no power to issue any shares of stock, or to declare or pay any dividends.

(b) PROFIT.—No part of the income or assets of the Corporation shall inure to the benefit of any director, officer, employee, or any other individual associated with the Corporation, except as salary or reasonable compensation for services.

(c) POLITICS.—The Corporation may not contribute to or otherwise support any political party or candidate for elective public office.

(d) PROHIBITION ON LOBBYING ACTIVITIES.—The Corporation shall not engage in lobbying activities (as defined in section 3(7) of the Lobbying Disclosure Act of 1995 (5 U.S.C. 1602(7))).

SEC. 206. POWERS, DUTIES, AND RESPONSIBILITIES OF THE CORPORATION.

(a) GENERAL POWERS.—The Corporation shall have the authority to do the following:

(1) To adopt and use a corporate seal.

(2) To have succession until dissolved by an Act of Congress.

(3) To prescribe, through the actions of its Board, bylaws not inconsistent with Federal law and the laws of the District of Columbia, regulating the manner in which the Corporation's general business may be conducted and the manner in which the privileges granted to the Corporation by law may be exercised.

(4) To exercise, through the actions of its Board, all powers specifically granted by the provisions of this subtitle, and such incidental powers as shall be necessary.

(5) To hold such hearings, sit and act at such times and places, take such testimony, and receive such evidence as the Corporation considers necessary to carry out its responsibilities and duties.

(6) To obtain grants and funds from and make contracts with individuals, private companies, organizations, institutions, and Federal, State, regional, and local agencies.

(7) To accept, hold, administer, and utilize gifts, donations, and bequests of property, both real and personal, for the purposes of aiding or facilitating the work of the Corporation.

(8) To issue notes or bonds to purchasers of such instruments in the private capital markets.

(9) To incur indebtedness to carry out the purposes of this subtitle.

(10) To spend funds under paragraph (6) in a manner authorized by the Board, but only for purposes that will advance or enhance public safety communications consistent with this Act.

(11) To establish reserve accounts with funds that the Corporation may receive from time to time that exceed the amounts required by the Corporation to timely pay its debt service and other obligations.

(12) To expend the funds placed in any reserve accounts established under paragraph (11) (including interest earned on any such amounts) in a manner authorized by the Board, but only for purposes that—

(A) will advance or enhance public safety communications consistent with this Act; or

(B) are otherwise approved by an Act of Congress.

(13) To take such other actions as the Corporation (through its Board) may from time to time determine necessary, appropriate, or advisable to accomplish the purposes of this subtitle.

(b) DUTY AND RESPONSIBILITY TO DEPLOY AND OPERATE A NATIONWIDE PUBLIC SAFETY INTEROPERABLE BROADBAND NETWORK.—

(1) IN GENERAL.—The Corporation shall hold the single public safety wireless license granted under section 201 and take all actions necessary to ensure the building, deployment, and operation of a nationwide public safety interoperable broadband network in consultation with Federal, State, tribal, and local public safety entities, the Director of NIST, the Commission, and the public safety advi-

sory committee established in section 204(b)(1), including by, at a minimum—

(A) ensuring nationwide standards for use and access of the network;

(B) issuing open, transparent, and competitive requests for proposals to private sector entities for the purposes of building, operating, and maintaining the network;

(C) encouraging that such requests leverage, to the maximum extent economically desirable, existing commercial wireless infrastructure to speed deployment of the network; and

(D) managing and overseeing the implementation and execution of contracts or agreements with non-Federal entities to build, operate, and maintain the network.

(2) INTEROPERABILITY.—In carrying out the duties and responsibilities of this subsection, including issuing requests for proposals, the Corporation shall—

(A) ensure the safety, security, and resiliency of the network, including requirements for protecting and monitoring the network to protect against cyberattack;

(B) promote competition in the equipment market, including devices for public safety communications, by requiring that equipment for use on the network be—

(i) built to open, non-proprietary, commercially available standards;

(ii) capable of being used by any public safety entity and by multiple vendors across all public safety broadband networks operating in the 700 MHz band; and

(iii) backward-compatible with existing second and third generation commercial networks to the extent that such capabilities are necessary and technically and economically reasonable; and

(C) promote integration of the network with public safety answering points or their equivalent.

(3) RURAL COVERAGE.—In carrying out the duties and responsibilities of this subsection, including issuing requests for proposals, the Corporation, consistent with the license granted under section 201, shall require deployment phases with substantial rural coverage milestones as part of each phase of

the construction and deployment of the network. To the maximum extent economically desirable, such proposals shall include partnerships with existing commercial mobile providers to utilize cost-effective opportunities to speed deployment in rural areas.

(4) EXECUTION OF AUTHORITY.—In carrying out the duties and responsibilities of this subsection, the Corporation may—

(A) obtain grants from and make contracts with individuals, private companies, and Federal, State, regional, and local agencies;

(B) hire or accept voluntary services of consultants, experts, advisory boards, and panels to aid the Corporation in carrying out such duties and responsibilities;

(C) receive payment for use of—

(i) network capacity licensed to the Corporatiou; and

(ii) network infrastructure constructed, owned, or operated by the Corporation; and

(D) take such other actions as may be necessary to accomplish the purposes set forth in this subsection.

(c) OTHER SPECIFIC DUTIES AND RESPONSIBILITIES.—

(1) ESTABLISHMENT OF NETWORK POLICIES.—In carrying out the requirements under subsection (b), the Corporation shall develop—

(A) requests for proposals with appropriate—

(i) timetables for construction, including by taking into consideration the time needed to build out to rural areas and the advantages offered through partnerships with existing commercial providers under paragraph (3);

(ii) coverage areas, including coverage in rural and uonurban areas;

(iii) service levels;

(iv) performance criteria; and

(v) other similar matters for the construction and deployment of such network;

(B) the technical and operational requirements of the network;

(C) practices, procedures, and standards for the management and operation of such network;

(D) terms of service for the use of such network, including billing practices; and

(E) ongoing compliance review and monitoring of the—

(i) management and operation of such network;

(ii) practices and procedures of the entities operating on and the personnel using such network; and

(iii) necessary training needs of network operators and users.

(2) STATE AND LOCAL PLANNING.—

(A) REQUIRED CONSULTATION.—In developing requests for proposals and otherwise carrying out its responsibilities under this Act, the Corporation shall consult with regional, State, tribal, and local jurisdictions regarding the distribution and expenditure of any amounts required to carry out the policies established under paragraph (1), including with regard to the—

(i) construction of an Evolved Packet Core and any Radio Access Network build out;

(ii) placement of towers;

(iii) coverage areas of the network, whether at the regional, State, tribal, or local level;

(iv) adequacy of hardening, security, reliability, and resiliency requirements;

(v) assignment of priority to local users;

(vi) assignment of priority and selection of entities seeking access to or use of the nationwide public safety interoperable broadband network established under subsection (b); and

(vii) training needs of local users.

(B) METHOD OF CONSULTATION.—The consultation required under subparagraph (A) shall occur between the Corporation and the single officer or governmental body designated under section 222(d).

(3) LEVERAGING EXISTING INFRASTRUCTURE.—In carrying out the requirement under subsection (b), the Corporation shall enter into agreements to utilize, to the maximum extent economically desirable, existing—

(A) commercial or other communications infrastructure; and

(B) Federal, State, tribal, or local infrastructure.

(4) MAINTENANCE AND UPGRADES.—The Corporation shall ensure the maintenance, operation, and improvement of the nationwide public safety interoperable broadband network established under subsection (b), including by ensuring that the Corporation updates and revises any policies established under paragraph (1) to take into account new and evolving technologies.

(5) ROAMING AGREEMENTS.—The Corporation shall negotiate and enter into, as it determines appropriate, roaming agreements with commercial network providers to allow the nationwide public safety interoperable broadband network to roam onto commercial networks and gain prioritization of public safety communications over such networks in times of an emergency.

(6) NETWORK INFRASTRUCTURE AND DEVICE CRITERIA.—The Director of NIST, in consultation with the Corporation and the Commission, shall ensure the development of a list of certified devices and components meeting appropriate protocols and standards for public safety entities and commercial vendors to adhere to, if such entities or vendors seek

to have access to, use of, or compatibility with the nationwide public safety interoperable broadband network established under subsection (b).

(7) REPRESENTATION BEFORE STANDARD SETTING ENTITIES.—The Director of NIST, in consultatiou with the Corporation, the Commission, and the public safety advisory committee established under section 204(b)(1), shall represent the interests of pnblic safety users of the nationwide public safety interoperable broadband network established under subsection (b) before any proceeding, negotiation, or other matter in which a standards organization, standards body, standards development organization, or any other recognized standards-setting entity regarding the development of standards relating to interoperability.

(8) PROHIBITION ON NEGOTIATION WITH FOREIGN GOVERNMENTS.—The Corporation shall not have the anthority to negotiate or enter into any agreements with a foreign government on behalf of the United States.

(d) USE OF MAILS.—The Corporation may use the United States mails in the same manner and under the same conditions as the departments and agencies of the United States.

SEC. 207. INITIAL FUNDING FOR THE CORPORATION.

(a) NTIA LOANS TO THE CORPORATION.—

(1) IN GENERAL.—Prior to the commencement of incentive auctions to be carried out under section 309(j)(8)(F) of the Communications Act of 1934 or the auction of spectrum pursuant to section 302, the NTIA is authorized to make loans to the Corporation.

(2) CONDITION OF LOANS.—At the time of application for, and as a condition to, any such loan, the Corporation shall file with the NTIA a statement with respect to the anticipated use of the proceeds of the loan.

(3) NTIA APPROVAL.—If the NTIA determines that such loan is necessary for the Corporatiou to carry out its duties and responsibilities under this subtitle and that the Corporation has submitted a plan which provides as reasonable an assurance of prompt repayment as may be feasible under the circumstances, then the NTIA shall so certify to the Secretary of the Treasury, and issue notes or other obligations to the Secretary of the Treasury pursuant to subsection (b).

(b) NTIA NOTES ISSUED TO TREASURY.—

(1) IN GENERAL.—To enable the NTIA to make loans under subsection (a), the NTIA is au-

thorized to issue to the Secretary of the Treasury notes or other obligations, in such forms and denominations, bearing such maturities, and subject to such terms and conditions, as may be prescribed by the Secretary of the Treasury.

(2) INTEREST ON NOTES.—

(A) ESTABLISHMENT.—Any notes or other obligations issued pursuant to paragraph (1) shall bear interest at a rate determined by the Secretary of the Treasury, taking into consideration the current average market yield on outstanding marketable obligations of the United States of comparable maturities during the month preceding the issuance of the notes or other obligations.

(B) REDUCTION.—The Secretary of the Treasury may reduce the interest rate set forth under subparagraph (A) if he determines such reduction to be in the national interest.

(3) AUTHORITY OF THE TREASURY TO SELL NOTES.—The Secretary of the Treasury may at any time sell any of the notes or other obligations acquired by him under this subsection. All redemptions, purchases, and sales by the Secretary of the Treasury of such notes or other obligations shall be

treated as public debt transactions of the United States.

SEC. 208. PERMANENT SELF-FUNDING; DUTY TO ASSESS AND COLLECT FEES FOR NETWORK USE.

(a) IN GENERAL.—The Corporation is authorized to assess and collect the following fees:

(1) NETWORK USER FEE.—A user or subscription fee from each entity, including any public safety entity or secondary user, that seeks access to or use of the nationwide public safety interoperable broadband network established under this subtitle.

(2) LEASE FEES RELATED TO NETWORK CAPACITY.—

(A) IN GENERAL.—A fee from any entity that seeks to enter into a covered leasing agreement.

(B) COVERED LEASING AGREEMENT.—For purposes of subparagraph (A), a "covered leasing agreement" means a written agreement between the Corporation and secondary user to permit—

(i) access to network capacity on a secondary basis for non-public safety services; and

(ii) the spectrum allocated to such entity to be used for commercial transmissions along the dark fiber of the long-haul network of such entity.

(3) LEASE FEES RELATED TO NETWORK EQUIPMENT AND INFRASTRUCTURE.—A fee from any entity that seeks access to or use of any equipment or infrastructure, including antennas or towers, constructed or otherwise owned by the Corporation.

(b) ESTABLISHMENT OF FEE AMOUNTS; PERMANENT SELF-FUNDING.—The total amount of the fees assessed for each fiscal year pursuant to this section shall be sufficient, and shall not exceed the amount necessary, to recoup the total expenses of the Corporation in carrying out its duties and responsibilities described under this subtitle for the fiscal year involved.

(c) REQUIRED REINVESTMENT OF FUNDS.—The Corporation shall reinvest amounts received from the assessment of fees under this section in the nationwide public safety interoperable broadband network by using such funds only for constructing, maintaining, or improving the network.

SEC. 209. AUDIT AND REPORT.

(a) AUDIT.—

(1) IN GENERAL.—The financial transactions of the Corporation for any fiscal year during which Federal funds are available to finance any portion of its operations shall be audited by the Comptroller General of the United States annually in accordance with the principles and procedures applicable to commercial corporate transactions and under such rules and regulations as may be prescribed by the Comptroller General. Each audit conducted by the Comptroller General under this paragraph shall be made available to Congress.

(2) LOCATION.—Any audit conducted under paragraph (1) shall be conducted at the place or places where accounts of the Corporation are normally kept.

(3) ACCESS TO CORPORATION BOOKS AND DOCUMENTS.—

(A) IN GENERAL.—For purposes of an audit conducted under paragraph (1), the representatives of the Comptroller General shall—

(i) have access to all books, accounts, records, reports, files, and all other papers, things, or property belonging to or in use by the Corporation that pertain to the financial transactions of the Corporation and are necessary to facilitate the audit; and

(ii) be afforded full facilities for verifying transactions with the balances or securities held by depositories, fiscal agents, and custodians.

(B) REQUIREMENT.—All books, accounts, records, reports, files, papers, and property of the Corporation shall remain in the possession and custody of the Corporation.

(b) REPORT.—

(1) IN GENERAL.—The Comptroller General of the United States shall submit a report of each audit conducted under subsection (a) to—

(A) the appropriate committees of Congress;

(B) the President; and

(C) the Corporation.

(2) CONTENTS.—Each report submitted under paragraph (1) shall contain—

(A) such comments and information as the Comptroller General determines necessary to inform Congress of the financial operations and condition of the Corporation;

(B) any recommendations of the Comptroller General relating to the financial operations and condition of the Corporation; and

(C) a description of any program, expenditure, or other financial transaction or undertaking of the Corporation that was observed during the course of the audit, which, in the opinion of the Comptroller General, has been carried on or made without the authority of law.

SEC. 210. ANNUAL REPORT TO CONGRESS.

(a) IN GENERAL.—Not later than 1 year after the date of enactment of this Act, and each year thereafter, the Corporation shall submit an annual report covering the preceding fiscal year to the appropriate committees of Congress.

(b) REQUIRED CONTENT.—The report required under subsection (a) shall include—

(1) a comprehensive and detailed report of the operations, activities, financial condition, and accomplishments of the Corporation under this section; and

(2) such recommendations or proposals for legislative or administrative action as the Corporation deems appropriate.

(c) AVAILABILITY TO TESTIFY.—The directors, officers, employees, and agents of the Corporation shall be available to testify before the appropriate committees of the Congress with respect to—

(1) the report required under subsection (a);

(2) the report of any audit made by the Comptroller General under section 209; or

(3) any other matter which such committees may determine appropriate.

SEC. 211. PUBLIC SAFETY ROAMING AND PRIORITY ACCESS.

The Commission may adopt rules, if necessary in the public interest, to improve the ability of public safety networks to roam onto commercial networks and to gain priority access to commercial networks in an emergency if—

(1) the public safety entity equipment is technically compatible with the commercial network;

(2) the commercial network is reasonably compensated; and

(3) such access does not preempt or otherwise terminate or degrade all existing voice conversations or data sessions.

SEC. 212. TRANSITIONAL ANALYSIS OF PUBLIC SAFETY NETWORK ATTRIBUTES.

(a) ESTABLISHMENT OF EVALUATION FRAMEWORK.—Not later than 180 days after the date of enactment of this Act, the Director of NIST, in consultation with the Secretary of Homeland Security, the Attorney General, and the Director of the Office of Management and Budget, shall develop an evaluation framework. The development of such an evaluation framework shall be informed by a study commissioned by the Director of NIST and completed by an independent and neutral agent, consultant, or expert, who has—

(1) at least 5 years of technical and economic experience in analyzing the costs and effectiveness of communications networks; and

(2) agreed not to contract or subcontract with the Corporation for at least 3 years from the date such study is completed other than for follow-on and related studies.

(b) CONSIDERATIONS.—The evaluation framework required to be developed under subsection (a) shall take into consideration the public safety network attributes identified in a report completed by the Visiting Committee on Advanced Technology of NIST. The report required under this subsection shall identify the desired attributes of the nationwide public safety interoperable broadband network to be established under this title, as well as any other attributes the Secretary of Commerce may request.

(c) REQUIRED EVALUATIONS.—The evaluation framework required to be developed under subsection (a) shall evaluate—

(1) the marginal cost of each public safety network attribute in developing, deploying, and operating the nationwide public safety interoperable broadband network to be established under this title;

(2) the benefit of each public safety network attribute to the nationwide public safety interoperable broadband network;

(3) the economic feasibility of requiring that each public safety attribute be required as part of the nationwide public safety interoperable broadband network;

(4) the resulting competitive vendor supply ecosystem created by each public safety attribute that is a part of the nationwide public safety interoperable broadband network; and

(5) the level of variability in regional requirements for each public safety attribute that is a part of the nationwide public safety interoperable broadband network.

(d) PROVISION OF FRAMEWORK TO THE CORPORATION.—The evaluation framework required to be developed under subsection (a) shall be provided to the Board of Directors of the Corporation, and the Corporation shall utilize the findings of such framework to develop a cost-benefit analysis to inform the building, deployment, and operation of the nationwide public safety interoperable broadband network to be established under this title.

(e) OMB RESPONSIBILITY.—The Director of the Office of Management and Budget, or his designee, as a member of the Board of Directors of the Corporation, shall have the responsibility to ensure that evaluation framework required to be developed under subsection (a) is appropriately utilized by the Corporation.

SEC. 213. PROHIBITION ON DIRECT OFFERING OF COMMERCIAL TELECOMMUNICATIONS SERVICE DIRECTLY TO CONSUMERS.

(a) IN GENERAL.—The Corporation shall not offer, provide, or market commercial telecommunications or information services directly to consumers.

(b) RULE OF CONSTRUCTION.—Nothing in this section shall be construed to prohibit the Corporation and a secondary user from entering into a covered leasing agreement pursuant to section 208(a)(2)(B). Nothing in this section shall be construed to limit the Corporation from collecting lease fees related to network equipment and infrastructure pursuant to section 208(a)(3).

SEC. 214. PROVISION OF TECHNICAL ASSISTANCE.

The Commission may provide technical assistance to the Corporation and may take any action necessary to assist the Corporation in effectuating its duties and responsibilities under this subtitle.

Subtitle B—Public Safety Commitments

SEC. 221. STATE AND LOCAL IMPLEMENTATION FUND.

(a) ESTABLISHMENT.—There is established in the Treasury of the United States a fund to be known as the "State and Local Implementation Fund".

(b) PURPOSE.—The Assistant Secretary shall establish and administer the grant program under section 222 using the funds deposited in the State and Local Implementation Fund.

(c) CREDITING OF RECEIPTS.—There shall be deposited into or credited to the State and Local Implementation Fund—

(1) any amounts specified in section 401; and

(2) any amounts borrowed by the Assistant Secretary under subsection (d).

(d) BORROWING AUTHORITY.—

(1) IN GENERAL.—The Assistant Secretary may borrow from the general fund of the Treasury beginning on October 1, 2011, such sums as may be necessary, but not to exceed $250,000,000, to implement section 222.

(2) REIMBURSEMENT.—The Assistant Secretary shall reimburse the general fund of the Treasury, without interest, for any amounts borrowed under subparagraph (A) as funds are deposited into the State and Local Implementation Fund.

SEC. 222. STATE AND LOCAL IMPLEMENTATION.

(a) ESTABLISHMENT OF STATE AND LOCAL IMPLEMENTATION GRANT PROGRAM.—The Assistant Secretary, in consultation with the Corporation, shall take such action as is necessary to establish a grant program to make grants to States to assist State, regional, tribal, and local jurisdictions to identify, plan, and implement the most efficient and effective way for such jurisdictions to utilize and integrate the infrastructure, equipment, and other architecture associated with the nationwide public safety interoperable broadband network established under subtitle A to satisfy the wireless communications and data services needs of that jurisdiction, including with regards to coverage, siting, and other needs.

(b) MATCHING REQUIREMENTS; FEDERAL SHARE.—

(1) IN GENERAL.—The Federal share of the cost of any activity carried out using a grant under this section may not exceed 80 percent of the eligible costs of carrying out that activity, as determined by the Assistant Secretary, in consultation with the Corporation.

(2) WAIVER.—The Assistant Secretary may waive, in whole or in part, the requirements of paragraph (1) for good cause shown if the Assistant Secretary determines that such a waiver is in the public interest.

(c) PROGRAMMATIC REQUIREMENTS.—Not later than 6 months after the establishment of the bylaws of the Corporation pursuant to section 206, the Assistant Secretary, in consultation with the Corporation, shall establish requirements relating to the grant program to be carried out under this section, including the following:

(1) Defining eligible costs for purposes of subsection (b)(1).

(2) Determining the scope of eligible activities for grant funding under this section.

(3) Prioritizing grants for activities that ensure coverage in rural as well as urban areas.

(d) CERTIFICATION AND DESIGNATION OF OFFICER OR GOVERNMENTAL BODY.—In carrying out the grant program established under this section, the Assistant Secretary shall require each State to certify in its application for grant funds that the State has designated a single officer or governmental body to serve as the coordinator of implementation of the grant funds.

SEC. 223. PUBLIC SAFETY WIRELESS COMMUNICATIONS RESEARCH AND DEVELOPMENT.

(a) NIST DIRECTED RESEARCH AND DEVELOPMENT PROGRAM.—From amounts made available from the Public Safety Trust Fund established under section 401, the Director of NIST, in consultation with the Commission, the Secretary of Homeland Security, and the National Institute of Justice of the Department of Jnstice, as appropriate, shall conduct research and assist with the development of standards, technologies, and applications to advance wireless public safety communications.

(b) REQUIRED ACTIVITIES.—In carrying out the requirement under subsection (a), the Director of NIST, in consultation with the Corporation and the public safety advisory committee established under section 204(b)(1), shall—

(1) document pnblic safety wireless communications technical requirements;

(2) accelerate the development of the capability for communications between currently deployed pub-

lic safety narrowband systems and the nationwide public safety interoperable broadband network to be established under this title;

(3) establish a research plan, and direct research, that addresses the wireless communications needs of public safety entities beyond what can be provided by the current generation of broadband technology;

(4) accelerate the development of mission critical voice, including device-to-device "talkaround" capability over broadband networks, public safety prioritization, authentication capabilities, and standard application programing interfaces for the nationwide public safety interoperable broadband network to be established under this title, if necessary and practical;

(5) accelerate the development of communications technology and equipment that can facilitate the eventual migration of public safety narrowband communications to the nationwide public safety interoperable broadband network to be established under this title; and

(6) convene working groups of relevant government and commercial parties to achieve the requirements in paragraphs (1) through (5).

SEC. 224. ADVANCED INFORMATION AND COMMUNICATIONS TECHNOLOGY RESEARCH.

(a) ADVANCED COMMUNICATIONS SERVICES FOR ALL AMERICANS.—The Director of NIST shall continue to snpport research and support standards development in advanced information and communications technologies focused on enhancing or facilitating the availability and affordability of advanced communications services to all Americans, in order to implement the Institute's responsibilities under section 2(c)(12) of the National Institute of Standards and Technology Act (15 U.S.C. 272(c)(12)). The Director of NIST shall support intramural research and cooperative research with institutions of higher education (as defined in section 101(a) of the Higher Education Act of 1965 (20 U.S.C. 1001(a))) and indnstry.

(b) DARPA RESEARCH.—

(1) IN GENERAL.—From amounts made available from the Public Safety Trust Fund established under section 401, the Defense Advanced Research Projects Agency (referred to in this subsection as "DARPA") shall conduct wireless communications research to develop more secure, reliable, and flexible radio-frequency systems for Federal wireless users. Areas of research to be supported by this subsection include, but are not limited to—

(A) technologies to increase wireless data transmission speeds to enable the next generation of Federal networks;

(B) spectrum sharing and interference mitigation techniques to enable more efficient uses of wireless spectrum;

(C) technologies to allow and foster the reallocation of spectrum, if appropriate, for non-Federal use; and

(D) research that fosters the conversion of the Department of Defense's wireless communications systems, and those of other Federal users, to more advanced or more efficient systems.

(2) COOPERATION.—In carrying out this subsection, DARPA shall collaborate where appropriate with NTIA, NIST, NSF, and other interested Federal agencies.

(3) LIMITATION ON USE.—Not more than 5 percent of any amounts made available in a fiscal year from the Public Safety Trust Fund established under section 401 may be used by DARPA to cover the administrative expenses incurred in carrying out this subsection.

(4) OMB REVIEW.—Amounts appropriated to DARPA under this subsection shall be available upon approval by the Director of the Office of Management and Budget of an implementation plan that has been developed and submitted to the Director by the head of DARPA.

TITLE III—SPECTRUM AUCTION AUTHORITY

SEC. 301. EXTENSION OF AUCTION AUTHORITY.

Section 309(j)(11) of the Communications Act of 1934 (47 U.S.C. 309(j)(11)) is amended by striking "2012" and inserting "2021".

SEC. 302. AUCTION OF SPECTRUM.

(a) IDENTIFICATION OF SPECTRUM.—Not later than 1 year after the date of enactment of this Act, the Assistant Secretary shall identify and make available for immediate reallocation, at a minimum, 15 megahertz of contiguous spectrum at frequencies located between 1675 megahertz and 1710 megahertz, inclusive, minus the geographic exclusion zones, or any amendment thereof, identified in NTIA's October 2010 report entitled "An Assessment of Near-Term Viability of Accommodating Wireless Broadband Systems in 1675–1710 MHz, 1755–1780 MHz, 3500–3650 MHz, and 4200–4220 MHz, 4380–4400 MHz Bands".

(b) AUCTION.—Not later than January 31, 2014, the Commission shall conduct the auctions of the following licenses, by commencing the bidding for:

(1) The spectrum between the frequencies of 1915 megahertz and 1920 megahertz, inclusive.

(2) The spectrum between the frequencies of 1995 megahertz and 2000 megahertz, inclusive.

(3) The spectrum between the frequencies of 2020 megahertz and 2025 megahertz, inclusive.

(4) The spectrum between the frequencies of 2155 megahertz and 2175 megahertz, inclusive.

(5) The spectrum between the frequencies of 2175 megahertz and 2180 megahertz, inclusive.

(6) The spectrum between the frequencies of 1755 megahertz and 1850 megahertz, inclusive.

(7) The spectrum identified pursuant to subsection (a).

(c) AUCTION ORGANIZATION.—The Commission may, if technically feasible and consistent with the public interest, combine the spectrum identified in paragraphs (4), (5), and the portion of paragraph (6) between the frequencies of 1755 megahertz and 1780 megahertz, inclusive, of subsection (b) in an auction of licenses for paired spectrum blocks.

(d) FURTHER REALLOCATION OF CERTAIN OTHER SPECTRUM.—

(1) COVERED SPECTRUM.—For purposes of this subsection, the term "covered spectrum" means the portion of the electromagnetic spectrum between the frequencies of 3550 to 3650 megahertz, inclusive, minus the geographic exclusion zones, or any amendment thereof, identified in NTIA's October 2010 report entitled "An Assessment of Near-Term Viability of Accommodating Wireless Broadband Systems in 1675–1710 MHz, 1755–1780 MHz, 3550–3650 MHz, and 4200–4220 MHz, 4380–4400 MHz Bands".

(2) IN GENERAL.—Consistent with requirements of section 309(j) of the Communications Act of 1934, the Commission shall reallocate covered spectrum for assignment by competitive bidding unless the President of the United States determines that—

(A) such spectrum cannot be reallocated due to the need to protect incumbent Federal systems from interference; or

(B) allocation of other spectrum—

(i) better serves the public interest, convenience, and necessity; and

(ii) can reasonably be expected to produce receipts comparable to what the covered spectrum might auction for without the geographic exclusion zones.

(3) ACTIONS REQUIRED IF COVERED SPECTRUM CANNOT BE REALLOCATED.—

(A) IN GENERAL.—If the President makes a determination under paragraph (2) that the covered spectrum cannot be reallocated, then the President shall, within 1 year after the date of such determination—

(i) identify alternative bands of frequencies totaling more than 20 megahertz and no more than 100 megahertz of spectrum used primarily by Federal agencies that satisfy the requirements of clauses (i) and (ii) of paragraph (2)(B);

(ii) report to the appropriate committees of Congress and the Commission an identification of such alternative spectrum for assignment by competitive bidding; and

(iii) make such alternative spectrum for assignment immediately available for reallocation.

(B) AUCTION.—If the President makes a determination under paragraph (2) that the covered spectrum cannot be reallocated, the Commission shall commence the bidding of the alternative spectrum identified pursuant to subparagraph (A) within 3 years of the date of enactment of this Act.

(4) ACTIONS REQUIRED IF COVERED SPECTRUM CAN BE REALLOCATED.—If the President does not make a determination under paragraph (1) that the covered spectrum cannot be reallocated, the Commission shall commence the competitive bidding for the covered spectrum within 3 years of the date of enactment of this Act.

(e) PROCEEDS.—Notwithstanding section 309(j)(8)(A) of the Communications Act of 1934, and except as provided in subparagraphs (B), (C), and (D) of such section 309(j)(8), all proceeds (including deposits and up front payments from successful bidders) from the auctions to be carried out pursuant to subsections (b) and (d) shall be deposited with the Public Safety Trust Fund established under section 401.

(f) AMENDMENTS TO DESIGN REQUIREMENTS RELATED TO COMPETITIVE BIDDING.—Section 309(j) of the

Communications Act of 1934 (47 U.S.C. 309(j)) is amended—

(1) in paragraph (3)—

(A) in subparagraph (E)(ii), by striking "; and" and inserting a semicolon;

(B) in subparagraph (F), by striking the period at the end and inserting a semicolon; and

(C) by adding at the end the following:

"(G) ensuring that there is an adequate opportunity for applicants to obtain licenses covering both large and small geographic areas, as such areas are determined by the Commission."; and

(2) by amending clause (i) of the second sentence of paragraph (8)(C) to read as follows:

"(i) the deposits—

"(I) of successful bidders of any auction conducted pursuant to subparagraph (F) or to section 302 of the Public Safety Spectrum and Wireless Innovation Act shall be paid to the Public Safety Trust Fund established under section 401 of such Act; and

"(II) of successful bidders of any other auction shall be paid to the Treasury;".

SEC. 303. INCENTIVE AUCTION AUTHORITY.

(a) IN GENERAL.—Paragraph (8) of section 309(j) of the Communications Act of 1934 (47 U.S.C. 309(j)) is amended—

(1) in subparagraph (A), by striking "(B), (D), and (E)," and inserting "(B), (D), (E), and (F),"; and

(2) by adding at the end the following:

"(F) INCENTIVE AUCTION AUTHORITY.—

"(i) AUTHORITY.—Notwithstanding any other provision of law, if the Commission determines that it is consistent with the pnblic interest in utilization of the spectrum for a licensee to relinquish voluntarily some or all of its licensed spectrum usage rights in order to permit the assignment of new initial licenses through a competitive bidding process subject to new service rules, or the designation of new spectrum for unlicensed use, the Commission may disburse to that licensee a portion of any auction proceeds that the Commission determines, in its discretion, are attributable to the licensee's relinquished spectrum usage rights, provided that television broadcast stations required to be carried pursuant to sections 338, 614, or 615 that voluntarily elect to share a channel shall retain the rights to carriage set forth in such sections and the rules of the Commission, as such rights apply to such station at its shared location.

"(ii) LIMITATION.—The Commission may not conduct more than one incentive auction of frequencies licensed to television stations pursuant to the provisions of section 303 of this Act.

"(iii) PROHIBITION.—

"(I) IN GENERAL.—The Commission may not reclaim spectrum licensed on a primary basis to a television broadcast station, directly or indirectly, on an involuntary basis for purposes of providing spectrum to carry out an incentive auction under this subparagraph.

"(II) MODIFICATION OR REVOCATION.—Notwithstanding the provisions in sections 303 and 304, the Commission shall have no authority to modify or revoke a license or take any action if the effect of such modification, revocation, or other action is to compel a licensee to participate in an incentive auction as authorized in this section or otherwise make frequencies available for such an auction.

"(III) REPACKING PERMITTED.—The Commission may reassign the frequency which a television broadcast station licensee is permitted to utilize, or a portion thereof in accordance with the provisions of this section, only if such reassignment—

"(aa) consists of a 6 MHz channel, located between channels 14 and 50, inclusive, in the same geographic market and with the same city of license, to each such licensee, and "(bb) preserves such licensee's—

"(AA) signal power level;

"(BB) tower height or transmission architecture; and

"(CC) interference levels with respect to such licensee's signal.

"(IV) LOW-POWER TELEVISION.—

"(aa) IN GENERAL.—The Commission may not reclaim spectrum licensed to a low-power television licensee, directly or indirectly, on an involuntary basis, unless the Commission finds the low-power television licensee a replacement channel with similar population coverage in the UHF television band of frequencies.

"(bb) EXCEPTION.—If the Commission or the licensee cannot locate a suitable channel within the UHF band, after an explanation to the licensee showing the basis for the determination that no channel is available, the Commission shall—

"(AA) collocate multiple low-power television licensees in a channel in the UHF band, by using channel sharing, with each licensee assigned half of the total bandwidth; or

"(BB) if no space exists for collocation of low-power television licensees in the UHF band as described in item (aa), assign a low-power television licensee a full channel between channels seven and 13, inclusive, in the VHF band.

"(V) PROHIBITION.—The Commission may not require any television station licensee involuntarily to collocate its facilities with the facilities of any other television broadcast station licensee in order to transmit on the same frequency.

"(VI) COLLOCATION PERMITTED.—Notwithstanding the requirement of subclause (III)(aa) that a frequeucy reassignment must consist of a 6 MHz channel, in any given market any 2 television broadcast station licensees shall be permitted to collocate their facilities in order to transmit on the same frequency.

"(VII) TREATMENT OF TRANSMISSION FROM COLLOCATED FACILITIES.—The transmission of any television broadcast stations voluntarily electing to share a 6 MHz channel shall each be treated as a 'primary channel' for purposes of the Commission's regulations implementing sections 338, 614, and 615 as in effect on the date of enactment of this subclause.

"(VIII) REIMBURSEMENT OF COSTS.—Any liceusee that is affected, directly or indirectly, by the Commission reassigning a licensee to a different channel shall be reimbursed for the costs resulting from such reassignment, including—

"(aa) those associated with the modification or replacement of broadcast signal transmission facilities and equipment, including the cost of temporary facilities;

"(bb) those associated with the construction, replacement, or relocation of a broadcast transmission tower, to the extent that those costs are related either to the reassignment to a different channel that a licensee is authorized to utilize, or to mitigate interference resulting from the reassignment of another licensee;

"(cc) those associated with the npgrade, replacement, or relocation of translator or booster stations affiliated with the relevant full-power licensee;

"(dd) those associated with consumer education efforts concerning the effect of a Commission reassignment of channels in a designated market area; and

"(ee) any other costs directly or indirectly resulting from the reassignment of channels in a designated market area.

"(IX) UNLICENSED SPECTRUM.—With respect to frequency bands between 54 and 72 MHz, 76 and 88 MHz, 174 and 216 MHz, 470 and 698 MHz, 84 MHz shall be assigned via a competitive bidding process. A portion of the proceeds from the competitive bidding of the frequency bands identified in the prior sentence may, if consistent with the public interest, be disbursed to other licensees, for the purpose of ensuring that unlicensed spectrum remains available in these frequency bands, nationwide, and in each local market.

"(iv) TREATMENT OF REVENUES.—Notwithstanding subparagraph (A), and except as provided in subparagraphs (B), (C), and (D), all proceeds (including deposits and up front payments from successful bidders) from the auction of spectrum under this subparagraph shall be deposited with the Public Safety Trust Fund established under section 401 of the Public Safety Spectrum and Wireless Innovation Act.

"(G) ESTABLISHMENT OF INCENTIVE AUCTION RELOCATION FUND.—

"(i) IN GENERAL.—There is established in the Treasury of the United States a fund to be known as the 'Incentive Auction Relocation Fund'.

"(ii) ADMINISTRATION.—The Assistant Secretary shall administer the Incentive Auction Relocation Fund using the amounts deposited pursuant to this section.

"(iii) CREDITING OF RECEIPTS.—There shall be deposited into or credited to the Incentive Auction Relocation Fund any amounts specified in section 401 of the Public Safety Spectrum and Wireless Innovation Act.

"(iv) AVAILABILITY.—Amounts in the Incentive Auction Relocation Fund shall be available to the NTIA for use—

"(I) for a period not to exceed 18 months following the later of—

"(aa) the completion of incentive auction from which such amounts were derived; or

"(bb) the date on which the Commission issues all the new channel assignments pursuant to any repacking required under subparagraph (F)(iii)(III); and

"(II) without further appropriation.

"(v) USE OF FUNDS.—Amounts in the Incentive Auction Relocation Fund may only be used by the NTIA, in consultation with the Commission, to cover—

"(I) the costs identified in subparagraph (F)(iii)(VIII); and

"(II) the costs incurred by multichannel video programming distributors for new equipment, installation, and construction related to the carriage of such relocated stations or the carriage of stations that voluntarily elect to share a channel, but retain their existing rights to carriage pursuant to sections 338, 614, and 615.".

(b) INCENTIVE AUCTIONS TO REPURPOSE CERTAIN MOBILE SATELLITE SERVICES SPECTRUM FOR TERRESTRIAL BROADBAND USE.—To the extent that the Commission makes available spectrum licenses on some or all of the frequencies between 2000 and 2020 MHz and 2180 and 2200 MHz for terrestrial broadband use, such licenses shall be assigned pursuant to the authority provided in section 309(j)(8) of the Communications Act of 1934 (47 U.S.C. 309(j)(8)), including, as appropriate, subparagraph (F) of such section.

(c) SENSE OF CONGRESS.—It is the sense of Congress that any spectrum identified for auction under this section should be licensed—

(1) on a flexible use basis to the extent technologically feasible; and

(2) consistent with the public interest, convenience, and necessity.

SEC. 304. EFFICIENT USE OF PUBLIC SAFETY SPECTRUM.

(a) STUDY AND REPORT.—Not later than 180 days after the date of enactment of this Act and not later than every 2 years thereafter, the Commission shall conduct a study and submit a report to the appropriate committees of Congress and to the Corporation on the spectrum used by public safety licensees or for public safety services pursuant to section 337(f) of the Communications Act of 1934 (47 U.S.C. 337).

(b) REQUIREMENTS.—The report required under subsection (a) shall—

(1) inventory the spectrum assigned to public safety use; and

(2) include—

(A) the amount of spectrum allocated to public safety use;

(B) the number of licensees and amount of spectrum assigned to each licensee;

(C) a general description of technologies and systems in each band;

(D) an approximation of network coverage, as appropriate, of major systems (such as an estimation of land mobile radio coverage by population) in major metropolitan areas; and

(E) an approximate number of users of major systems, such as the number of first responders using land mobile radio, in major metro areas;

(3) assess if spectrum is adequate to meet the current and future needs for public safety services; and

(4) assess the opportunity for return of any additional spectrum to the Commission for reallocation.

SEC. 305. REPORT ON SATELLITE BROADBAND.

Not later than 2 years after the date of enactment of this Act, the Comptroller General of the United States shall conduct a study and submit to the appropriate committees of Congress a report on the current and future capabilities of fixed and mobile satellite broadband to assist pnblic safety entities during an emergency.

SEC. 306. FEDERAL INFRASTRUCTURE SHARING.

The Administrator of General Services shall establish rules to allow public safety entities licensed or otherwise permitted to use spectrum allocated to the Public Safety

Broadband Corporation to have access to those components of Federal infrastructure appropriate for the construction and maintenance of the nationwide public safety interoperable broadband network to be established under title II.

SEC. 307. REPORT ON UNLICENSED SPECTRUM.

Not later than 5 years after the date of enactment of this Act, the Commission shall submit to the appropriate committees of Congress a report on—

(1) the status of development of any spectrum designated as unlicensed spectrum by the Commission under this Act; and

(2) the nse of any unlicensed spectrum described in paragraph (1).

TITLE IV—PUBLIC SAFETY TRUST FUND

SEC. 401. PUBLIC SAFETY TRUST FUND.

(a) ESTABLISHMENT OF PUBLIC SAFETY TRUST FUND.—

(1) IN GENERAL.—There is established in the Treasury of the United States a trust fund to be known as the "Public Safety Trust Fund".

(2) CREDITING OF RECEIPTS.—

(A) IN GENERAL.—There shall be deposited into or credited to the Public Safety Trust

Fund the proceeds from the auction of spectrum carried out pursuant to—

(i) section 302 of this Act; and

(ii) section 309(j)(8)(F) of the Communications Act of 1934, as added by section 303 of this Act.

(B) AVAILABILITY.—Amounts deposited into or credited to the Public Safety Trust Fund in accordance with subparagraph (A) shall remain available until the end of fiscal year 2021. Upon the expiration of the period described in the prior sentence such amounts shall be deposited in the General Fund of the Treasury, where such amounts shall be dedicated for the sole purpose of deficit reduction.

(b) USE OF FUND.—Amounts deposited in the Public Safety Trust Fund shall be used in the following manner:

(1) PAYMENT OF AUCTION INCENTIVE.—

(A) REQUIRED DISBURSALS.—Amounts in the Public Safety Trust Fund shall be used to make any required disbursal of payments to licensees required pursuant to—

(i) clause (i) and subclause (VIII) of clause (iii) of section 309(j)(8)(F) of the Communications Act of 1934; and

(ii) section 303(b) of this Act.

(B) NOTIFICATION TO CONGRESS.—

(i) IN GENERAL.—At least 3 months in advance of any incentive auction conducted pursuant to subparagraph (F) of section 309(j)(8) of the Communications Act of 1934, the Chairman of the Commission, in consultation with the Director of the Office of Management and Budget, shall notify the appropriate committees of Congress—

(I) of the methodology for calculating the disbursal of payments to certain licensees required pursuant to clause (i) and subclause (VIII) of clause (iii) of such subparagraph; and

(II) that such methodology considers the value of the spectrum voluntarily relinquished in its current use and the timeliness with which the licensee will clear its use of such spectrum.

(ii) DEFINITION.—In this clause, the term "appropriate committees of Congress" means—

(I) the Committee on Commerce, Science, and Transportation of the Senate;

(II) the Committee on Appropriations of the Senate;

(III) the Committee on Energy and Commerce of the House of Representatives; and

(IV) the Committee on Appropriations of the House of Representatives.

(2) INCENTIVE AUCTION RELOCATION FUND.—Not less than 5 percent of the amounts in the Public Safety Trust Fund but not more than $1,500,000,000 shall be deposited in the Incentive Auction Relocation Fund established under section 309(j)(8)(G) of the Communications Act of 1934.

(3) STATE AND LOCAL IMPLEMENTATION FUND.—$250,000,000 shall be deposited in the State and Local Implementation Fund established under section 221.

(4) PUBLIC SAFETY BROADBAND CORPORATION.—$11,750,000,000 shall deposited with the Public Safety Broadband Corporation established under section 202, of which pursuant to its respon-

sibilities and duties set forth under section 206 to deploy and operate a nationwide public safety interoperable broadband network—

(A) not less than $10,500,000,000 shall be made available for any Radio Access Network build out; and

(B) not less than $1,250,000,000 shall be made available to develop an Evolved Packet Core.

(5) PUBLIC SAFETY RESEARCH AND DEVELOPMENT.—$100,000,000 per year for each of the fiscal years 2012 through 2016 shall be made available for use by the Director of NIST to carry out the research program established under section 223.

(6) ADVANCED INFORMATION AND TECHNOLOGY RESEARCH.—$70,000,000 per year for each of the fiscal years 2012 through 2016 shall be made available to carry out the research program established under section 224(b).

(7) DEFICIT REDUCTION.—Any amounts remaining after the deduction of the amounts required under paragraphs (1) through (6) shall be deposited in the General Fund of the Treasury, where such amounts shall be dedicated for the sole purpose of deficit reduction.

(c) INVESTMENT.—Amounts in the Public Safety Trust Fund shall be invested in accordance with section 9702 of title 31, United States Code, and any interest on, and proceeds from, any such investment shall be credited to, and become a part of, the Fund.

TITLE V—SPECTRUM POLICY

Subtitle A—Inventory and Planning

SEC. 501. RADIO SPECTRUM INVENTORY.

(a) SPECTRUM INVENTORY.—Part I of title III of the Communications Act of 1934 (47 U.S.C. 301 et seq.) is amended by adding at the end the following:

"SEC. 342. SPECTRUM INVENTORY.

"(a) RADIO SPECTRUM INVENTORY.—Not later than 180 days after the date of enactment of the Public Safety Spectrum and Wireless Innovation Act, and biennially thereafter, the Commission, in consultation with the NTIA and the Office of Science and Technology Policy, shall carry out the following activities:

"(1) REPORT.—Prepare a report that includes an inventory of each radio spectrum band, from 300 MHz to 3.5 GHz, at a minimum, managed by each such agency. Except as provided in subsection (b), the report shall include—

"(A) the licensee or government user authorized in the band;

"(B) the total spectrum authorized for each licensee or government nser (in percentage terms and in sum) in the band;

"(C) the approximate number of transmitters, end-user terminals, or receivers, excluding unintended radiators, that have been deployed or authorized, for each licensee or government user, in the band; and

"(D) if such information is available—

"(i) the type of transmitters, end-user terminals, or receivers, excluding unintended radiators, operating in the band and whether they are space-, air-, or ground-based;

"(ii) the type of transmitters, end-user terminals, or receivers, excluding unintended radiators, authorized to operate in the band and whether they are space-, air-, or ground-based;

"(iii) contour maps or other information that illustrate the coverage area, receiver performance, and other parameters relevant to an assessment of the availability of spectrum in each band;

"(iv) the approximate geolocation of base stations or fixed transmitters;

"(v) the approximate extent of use, by geography, of each band of frequencies, such as the amount and percentage of time of use, number of end-users, or other measures as appropriate to the particular band;

"(vi) the activities, capabilities, functions, or missions supported by the transmitters, end-user terminals, or receivers; and

"(vii) the types of unlicensed devices authorized to operate in the band.

"(2) PUBLIC ACCESS.—Create a centralized portal or website utilizing data from the Commission and the NTIA to make a centralized inventory of the bands of each agency available to the public via an Internet-accessible website.

"(3) UPDATES.—Make all reasonable efforts to maintain and update the information required under paragraph (2) no less frequently than quarterly to reflect, at a minimum, any transfer or auction of licenses or change in allocation, assignment, or authorization.

"(4) FCC TO BEAR COSTS.—Notwithstanding any other provision of law, all costs incurred by the Commission and the NTIA in establishing and maintaining the centralized inventory and the centralized portal or website shall be borne exclusively by the Commission.

"(5) PAPERWORK REDUCTION ACT EXEMPTION.—Any forms prescribed by the Commission under this section, and any information-gathering activities of the Commission under this section, shall not be subject to the provisions of sections 3507 or 3512 of title 44, United States Code (44 U.S.C. 3507, 3512).

"(b) NATIONAL SECURITY; CLASSIFIED INFORMATION.—

"(1) IN GENERAL.—If the head of a Federal agency determines that disclosure of information required by subsection (a) would be harmful to the national security of the United States, the agency shall—

"(A) notify the NTIA of its determination; and

"(B) provide to the NTIA—

"(i) the other publicly releasable information required by subsection (a);

"(ii) to the maximum extent practicable, a summary description of the information with respect to which the determination was made; and

"(iii) an annex containing the information with respect to which the determination was made.

"(2) CLASSIFIED INFORMATION.—If the head of a Federal agency determines that any information required by subsection (a) is classified in accordance with Executive Order 13526 of December 29, 2009, or any successor Executive Order establishing or modifying the uniform system for classifying, safeguarding, and declassifying national security information, the agency shall—

"(A) notify the NTIA of its determination; and

"(B) provide to the NTIA—

"(i) the information required by subsection (a)(1) that is not classified;

"(ii) to the maximum extent practicable, a summary description of the information that is classified; and "(iii) an annex containing the information that is classified.

"(3) ANNEX RESTRICTION.—The NTIA shall make an annex described in paragraph (1)(B)(iii) or (2)(B)(iii) available to the Commission. Neither the NTIA nor the Commission may make any such annex available to the public pursuant to subsection (a)(2) or to any unauthorized person through any other means.

"(c) PUBLIC SAFETY NONDISCLOSURE.—

"(1) IN GENERAL.—If a licensee of non-Federal spectrum determines that public disclosure of certain information held by that licensee and required to be included in the report under subsection (a) would reveal information for which public disclosure would be detrimental to public safety, or that the licensee is otherwise prohibited by law from disclosing, the licensee may petition the Commission for a partial or total exemption from inclusion on the centralized portal or website under subsection (a)(2) and in the reports required under subsection (d).

"(2) BURDEN.—A licensee seeking an exemption under this subsection bears the burden of justifying the exemption and shall provide clear and convincing evidence to support the requested exemption.

"(3) INFORMATION REQUIRED.—If the Commission grants an exemption under this subsection, the licensee shall provide to the Commission—

"(A) the publicly releasable information required by subsection (a)(1) for the inventory;

"(B) to the maximum extent practicable, a summary description, suitable for public release, of the information for which public disclosure would be detrimental to public safety or that the licensee is prohibited by law from disclosing; and

"(C) an annex, under appropriate cover, containing the information that the Commission has determined should be withheld from public disclosure.

"(d) INFORMING THE CONGRESS.—

"(1) IN GENERAL.—Except as provided in paragraph (3), the NTIA and the Commission shall submit each report required by subsection (a)(1) to the appropriate committees of Congress.

"(2) NONDISCLOSURE OF ANNEXES.—Each such report shall be submitted in unclassified form, but may include 1 or more annexes as provided for by subsections (b)(1)(B)(iii), (b)(2)(B)(iii), and (c)(3)(C). No Congressional committee may make any such annex available to the public or to any unauthorized person.

"(3) CLASSIFIED ANNEXES.—If a report includes a classified annex as provided for by subsection (b)(2)(B)(iii), the NTIA and the Commission shall—

"(A) submit the classified annex only to the appropriate committees of Congress with primary oversight jurisdiction for the user agencies or licensees concerned; and

"(B) provide notice of the submission to the other appropriate committees of Congress.

"(e) DEFINITIONS.—In this section:

"(1) APPROPRIATE COMMITTEES OF CONGRESS.—The term 'appropriate committees of Congress' means the Committee on Commerce, Science, and Transportation of the Senate, the Committee on Energy and Commerce of the House of Representatives, and any other congressional committee with primary oversight jurisdiction for the user agencies or licensees concerned.

"(2) NTIA.—The term 'NTIA' means the National Telecommunications and Information Administration.".

(b) PROGRESS REPORT.—Within 180 days after the date of enactment of this title, the Commission and the NTIA shall provide an update as to the status of the inventory and report required by section 342(a) of the Communications Act of 1934, as added by subsection (a), to the appropriate committees of Congress.

SEC. 502. FEDERAL SPECTRUM PLANNING.

(a) REVIEW OF EVALUATION PROCESS.—Not later than 6 months after the date of enactment of this title, the Comptroller General of the United States shall—

(1) conduct a review of the processes that Federal entities utilize to evaluate their spectrum needs and manage their spectrum resources;

(2) make recommendations on how to improve such processes; and

(3) submit a written report to the appropriate committees of Congress on the review, analysis, and recommendations made pursuant to paragraphs (1) and (2).

(b) REVISION OF EVALUATION PROCESS.—

(1) IN GENERAL.—Not later than 1 year after the date of enactment of this title, each Federal entity shall establish, update, or revise the process used by such entity to evaluate their proposed spectrum needs, taking into account any applicable rec-

ommendations made in the report required under subsection (a).

(2) REQUIRED INCLUSIONS.—

(A) ANALYSIS OF OPTIONS.—Each process described under paragraph (1), whether newly established or otherwise revised, shall include an analysis and assessment of—

(i) the options available to a Federal entity to obtain associated communications services that are the most spectrum-efficient; and

(ii) the effective alternatives available to such entity that will permit the entity to continue to satisfy the mission requirements of the entity.

(B) ANALYSIS SUBMITTED TO NTIA.—The analysis and assessment carried out pursuant to subparagraph (A) shall be submitted by the Federal entity to the NTIA at the same time that the entity seeks certification or recertification, if applicable, of spectrum support from the NTIA pursuant to the requirements of the National Telecommunications and Information Administration Organization Act and OMB Circular A–11.

(c) SPECTRUM PLANS OF FEDERAL ENTITIES.—

(1) IN GENERAL.—Not later than 1 year after the date of enactment of this title, and every 2 years thereafter, each Federal entity shall provide an entity-specific strategic spectrum plan to the Assistant Secretary and the Director of the Office of Management and Budget.

(2) REQUIRED INCLUSIONS.—Each strategic spectrum plan submitted pursuant to paragraph (1) shall include—

(A) the spectrum requirements of the entity;

(B) the planned uses of new technologies or expanded services requiring spectrum over a period of time agreed to by the entity;

(C) suggested spectrum-efficient approaches to meeting the spectrum requirements identified under subparagraph (A); and

(D) progress reports on what the entity is doing to improve its spectrum management.

(d) NATIONAL SECURITY; CLASSIFIED INFORMATION.—

(1) IN GENERAL.—If the head of a Federal entity determines that disclosure of information required by subsection (c) would be harmful to the na-

tional security of the United States, the entity shall—

(A) notify the NTIA of its determination; and

(B) provide to the NTIA—

(i) the other publicly releasable information required by subsection (c);

(ii) to the maximum extent practicable, a summary description of the information with respect to which the determination was made; and

(iii) an annex containing the information with respect to which the determination was made.

(2) CLASSIFIED INFORMATION.—If the head of a Federal entity determines that any information required by subsection (c) is classified in accordance with Executive Order 13526 of December 29, 2009, or any successor Executive Order establishing or modifying the uniform system for classifying, safeguarding, and declassifying national security information, the entity shall—

(A) notify the NTIA of its determination; and

(B) provide to the NTIA—

(i) the information required by subsection (c) that is not classified;

(ii) to the maximum extent practicable, a summary description of the information that is classified; and

(iii) an annex containing the information that is classified.

(3) ANNEX RESTRICTION.—The NTIA shall make an annex described in paragraph (1)(B)(iii) or (2)(B)(iii) available to the Secretary of Commerce and the Director of the Office of Management and Budget. Neither the NTIA, the Secretary of Commerce, nor the Director of the Office of Management and Budget may make any such annex available to the public or to any unauthorized person through any other means.

(e) FEDERAL STRATEGIC SPECTRUM PLAN.—

(1) DEVELOPMENT AND SUBMISSION.—

(A) IN GENERAL.—Not later than 6 months after the receipt of the iuitial entity-specific strategic spectrum plans required under subsection (c), the Secretary of Commerce shall develop a Federal Strategic Spectrum Plan, in coordination with the Assistant Secretary and the Director of the Office of Management and Budget.

(B) SUBMISSION TO CONGRESS.—Consistent with the requirements set forth in subsection (d)(3), the Secretary of Commerce shall submit the Federal Strategic Spectrum Plan developed under subparagraph (A) to the appropriate committees of Congress.

(C) NONDISCLOSURE OF ANNEXES.—The Federal Strategic Spectrum Plan required to be submitted under subparagraph (B) shall be submitted in unclassified form, but shall include, if appropriate, 1 or more annexes as provided for by subsections (d)(1)(B)(iii) and (d)(2)(B)(iii). No Congressional committee may make any such annex available to the public or to any unauthorized person.

(D) CLASSIFIED ANNEXES.—If the Federal Strategic Spectrum Plan includes a classified annex as provided for by subsection (d)(2)(B)(iii), the Secretary of Commerce shall—

(i) submit the classified annex only to the appropriate committees of Congress with primary oversight jurisdiction for the user entities or licensees concerned; and

(ii) provide notice of the submission to the other appropriate committees of Congress.

(E) DEFINITION.—In this subsection, the term "appropriate committees of Congress" means the Committee on Commerce, Science, and Transportation of the Senate, the Committee on Energy and Commerce of the House of Representatives, and any other congressional committee with primary oversight jurisdiction for the user entity or licensees concerned.

(2) INCORPORATION OF ENTITY PLANS.—The Federal Strategic Spectrum Plan developed under paragraph (1) shall incorporate, consistent with the requirements of subsection (d), the initial entity-specific strategic spectrum plans submitted under subsection (c).

(3) REQUIRED INCLUSIONS.—The Federal Strategic Spectrum Plan developed under paragraph (1) shall include—

(A) information on how spectrum assigned and used by Federal entities is being used;

(B) opportunities to increase efficient use of infrastructure and spectrum assigned and used by Federal entities;

(C) an assessment of the future spectrum needs of the Federal Government; and

(D) plans to incorporate such needs in the NTIA's frequency assignment, equipment certification, and review processes.

(4) UPDATES.—The Secretary of Commerce shall revise and update the Federal Strategic Spectrum Plan developed under paragraph (1) accordingly pursuant to the biennial submission of the entity-specific strategic spectrum plans submitted under subsection (c).

(f) NATIONAL STRATEGIC SPECTRUM PLAN.—

(1) IN GENERAL.—Not later than 2 years after the date of enactment of this title, the NTIA and the Commission, in consultation with other Federal, State, local, and tribal governments and commercial spectrum interests, shall develop a quadrennial National Strategic Spectrum Plan.

(2) REQUIRED INCLUSION.—The National Strategic Spectrum Plan shall include the following:

(A) The Federal Strategic Spectrum Plan developed under subsection (e).

(B) Long-range spectrum planning of both commercial, State and local government, and Federal Government users.

(C) New technologies or expanded services requiring spectrum.

(D) The nature and characteristics of the new radio communication systems required and the nature and characteristics of the spectrum required.

(E) Efficient approaches to meeting the future spectrum requirements of all users, including—

(i) requiring certain standards-based technologies that improve spectrum efficiencies;

(ii) spectrum sharing and reuse opportunities;

(iii) possible reallocation; and

(iv) any other approaches that promote efficient use of spectrum.

(F) An evaluation of current auction processes to determine the effectiveness of such processes in—

(i) promoting competition;

(ii) improving spectrum use efficiency; and

(iii) maximizing the full economic value to customers, industry, and the taxpayer of the spectrum.

Subtitle B—Markets

SEC. 511. PROMOTING SECONDARY SPECTRUM MARKETS.

(a) In General.—Not later than 18 months after the date of enactment of this title, the Commission shall conduct a rulemaking proceeding to determine how to further promote a more robust secondary spectrum market.

(b) Consideration.—In carrying out the rulemaking required under subsection (a), the Commission shall consider the feasability and value of establishing a national database to collect and disseminate information on secondary spectrum market opportunities.

SEC. 512. UNLICENSED USE IN 5 GHZ.

(a) Modification of Regulations.—

(1) In general.—Not later than 1 year after the date of enactment of this title, the Commission shall modify part 15 of title 47, Code of Federal Regulations, to allow unlicensed devices intended and marketed for indoor use to operate in the 5350–5470 MHz band.

(2) CONCERNS AND CONSIDERATIONS.—In carrying out the modification requirement set forth under paragraph (1), the Commission shall allow the unlicensed devices described in paragraph (1) to operate in the 5350–5470 MHz band, on an indoor basis only, if it—

(A) finds that technical solutions will protect licensed users, including use of existing, modified, or new spectrum sharing technologies and solutions, such as dynamic frequency selection; and

(B) determines that the primary mission of Federal spectrum users in the 5350–5470 MHz band will not be compromised by the introduction of unlicensed devices in the 5350–5470 MHz band.

(b) NTIA STUDY.—

(1) IN GENERAL.—Not later than 8 months after the date of enactment of this title, and in consultation with the Commission, the NTIA shall conduct and submit a study as provided in paragraph (2) evaluating known and proposed sharing technologies and the risk to Federal users if unlicensed U–NII devices were allowed to operate indoors in the 5350–5470 MHz band.

(2) SUBMITTING STUDY.—The study required by paragraph (1) shall be submitted to the appropriate committees of Congress and the Commission.

SEC. 513. EXPERIMENTAL LICENSES.

Not later than 9 months after the date of enactment of this title, the Commission shall revise part 5 of chapter I of title 47, Code of Federal Regulations, to—

(1) streamline such regulations to promote greater experimentation;

(2) broaden opportunities for market trials;

(3) promote advancements in health care;

(4) establish innovation zones; and

(5) establish a process by which qualified entities, including colleges, universities, public and private companies, and non-profit research organizations, will be permitted to use a broad range of radio frequencies for research and experimentation on a non-interference basis without having to obtain prior authorization from the Commission for the use of specific frequencies.

SEC. 514. REPURPOSING FEDERAL SPECTRUM FOR COMMERCIAL PURPOSES AND FEDERAL SPECTRUM SHARING.

(a) ELIGIBLE FEDERAL ENTITIES.—Section 113(g)(1) of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 923(g)(1)) is amended to read as follows:

"(1) ELIGIBLE FEDERAL ENTITIES.—Any Federal entity that operates a Federal Government station authorized to use a band of frequencies specified in paragraph (2) and that incurs relocation costs because of planning for a potential auction of spectrum frequencies, a planned auction of spectrum frequencies, or the reallocation of spectrum frequencies from Federal use to exclusive non-Federal use, or shared Federal and non-Federal use shall receive payment for such costs from the Spectrum Relocation Fund, in accordance with section 118 of this Act. For purposes of this paragraph, Federal power agencies exempted under subsection (c)(4) that choose to relocate from the frequencies identified for reallocation pursuant to subsection (a), are eligible to receive payment under this paragraph.".

(b) ELIGIBLE FREQUENCIES.—Section 113(g)(2)(B) of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 923(g)(2)(B)) is amended to read as follows:

"(B) any other band of frequencies reallocated from Federal use to non-Federal or shared use, whether for licensed or unlicensed use, after January 1, 2003, that is assigned—

"(i) by competitive bidding pursuant to section 309(j) of the Communications Act of 1934 (47 U.S.C. 309(j)); or

"(ii) as a result of an Act of Congress or any other administrative or executive direction.".

(c) DEFINITION OF RELOCATION AND SHARING COSTS.—Section 113(g)(3) of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 923(g)(3)) is amended to read as follows:

"(3) DEFINITION OF RELOCATION AND SHARING COSTS.—For purposes of this subsection, the terms 'relocation costs' and 'sharing costs' mean the costs incurred by a Federal entity to plan for a potential or planned auction or sharing of spectrum frequencies and to achieve comparable capability of systems, regardless of whether that capability is achieved by relocating to a new frequency assignment, relocating a Federal Government station to a different geographic location, modifying Federal Government equipment to mitigate interference or use less spectrum, in terms of bandwidth, geography, or time, and thereby permitting spectrum sharing (including sharing among relocated Federal entities and incumbents to make spectrum available for non-Federal use) or relocation, or by utilizing an alternative technology. Comparable capability of systems includes the acquisition of state-of-the art replacement systems intended to meet comparable operational scope, which may include incidental increases in functionality, including those necessary to achieve security, reliability, and resiliency. Such costs include—

"(A) the costs of any modification or replacement of equipment, spares, associated ancillary equipment, software, facilities, operating manuals, training costs, or regulations that are attributable to relocation or sharing;

"(B) the costs of all engineering, equipment, software, site acquisition, and construction costs, as well as any legitimate and prudent transaction expense, including term-limited Federal civil servant and contractor staff necessary to carry out the relocation activities of an eligible Federal entity, and reasonable additional costs incurred by the Federal entity that are attributable to relocation or sharing, including increased recurring costs associated with the replacement of facilities;

"(C) the costs of research, engineering studies, economic analyses, or other expenses reasonably incurred in connection with—

"(i) calculating the estimated relocation costs that are provided to the Commission pursuant to paragraph (4) of this subsection, or in calculating the estimated sharing costs;

"(ii) determining the technical or operational feasibility of relocation to 1 or more potential relocation bands; or

"(iii) planning for or managing a relocation or sharing project (including spectrum coordination with auction winners) or potential relocation or sharing project;

"(D) the one-time costs of any modification of equipment reasonably necessary to accommodate commercial use of shared frequencies or, in the case of frequencies reallocated to exclusive commercial use, prior to the termination of the Federal entity's primary allocation or protected status, when the eligible frequencies as defined in paragraph (2) of this subsection are made available for private sector uses by competitive bidding and a Federal entity retains primary allocation or protected status in those frequencies for a period of time after the completion of the competitive bidding process;

"(E) the costs associated with the accelerated replacement of systems and equipment if such acceleration is necessary to ensure the timely relocation of systems to a new frequency assignment or the timely accommodation of sharing of Federal frequencies; and

"(F) the costs of the use of commercial systems (including systems not utilizing spectrum) to replace Federal systems discontinued or relocated pursuant to this Act, including lease (including lease of land), subscription, and equipment costs over an appropriate period, such as the anticipated life of an equivalent Federal system or other period determined by the Director of the Office of Management and Budget.".

(d) SPECTRUM SHARING.—Section 113(g) of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 923(g)) is amended by adding at the end the following:

"(7) SPECTRUM SHARING.—A Federal entity is permitted to allow access to its frequency assignments by a non-Federal entity upon approval of NTIA, in consultation with the Director of the Office of Management and Budget. Such non-Federal entities shall comply with all applicable rules of the Commission and the NTIA, including any regulations promulgated pursuant to this section. Any remuneration associated with such access shall be deposited into the Spectrum Relocation Fund established under section 118. A Federal entity that incurs costs as a result of such access is eligible for payment from the Fund for the purposes specified in paragraph (3) of this section. The revenue associated with such access shall be at least 110 percent of the estimated Federal costs.".

(e) SPECTRUM RELOCATION FUND.—Section 118 of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 928) is amended—

(1) in subsection (b), by inserting before the period at the end the following: "and any payments made by non-Federal entities for access to Federal

spectrum pursuant to section 113(g)(7) (47 U.S.C. 113(g)(7))";

(2) by amending subsection (c) to read as follows:

"(c) USE OF FUNDS.—

"(1) FUNDS FROM AUCTIONS.—The amounts in the Fund from auctions of eligible frequencies are authorized to be used to pay relocation costs, as such costs are defined in section 113(g)(3), of an eligible Federal entity incurring such costs with respect to relocation from any eligible frequency.

"(2) FUNDS FROM PAYMENTS BY NON-FEDERAL ENTITIES.—The amounts in the Fund from payments by non-Federal entities for access to Federal spectrum are authorized to be used to pay the sharing costs, as such costs are defined in section 113(g)(3), of an eligible Federal entity incurring such costs.

"(3) TRANSFER OF FUNDS.—

"(A) IN GENERAL.—Subject to subparagraph (B), the Director of OMB may transfer at any time (including prior to any auction or contemplated auction, or sharing initiative) such sums as may be available in the Fund to an eligible Federal entity to pay eligible relocation or sharing costs related to pre-auction estimates or research, as such costs are described in section 113(g)(3)(C).

"(B) NOTIFICATION.—No funds may be transferred pursuant to subparagraph (A) unless the notification provided under subsection (d)(2)(B) of this section includes a certification from the Director of OMB that—

"(i) funds transferred before an auction will likely allow for a timely relocation, thereby increasing net expected auction proceeds by an amount equal to or greater than the time value of the amount of funds transferred; and

"(ii) the auction is intended to occur within 5 years of transfer of funds.

"(C) APPLICABILITY.—

"(i) PRIOR COSTS INCURRED.—The Director of OMB may transfer up to $10,000,000 to eligible Federal entities for eligible relocation or sharing costs related to pre-auction estimates or research, as such costs are described in section 113(g)(3)(C), for costs incurred prior to the date of the enactment of the Public

Safety Spectrum and Wireless Innovation Act, but after June 28th, 2010.

"(ii) SUPPLEMENT NOT SUPPLANT.—Any amounts transferred by the Director of OMB pursuant to clause (i) shall be in addition to any amounts that the Director of OMB may transfer after the date of the enactment of the Public Safety Spectrum and Wireless Innovation Act.";

(3) in subsection (d)—

(A) in paragraph (1), by inserting "and sharing" before "costs";

(B) in paragraph (2)(B)—

(i) by inserting "and sharing" before "costs"; and

(ii) by inserting "and sharing" before the period at the end; and

(C) by amending paragraph (3) to read as follows:

"(3) REVERSION OF UNUSED FUNDS.—

"(A) IN GENERAL.—Any amounts in the Fund that are remaining after the payment of the relocation and sharing costs that are payable from the Fund shall revert to and be deposited in the General Fund of the Treasury not later than 8 years after the date of the deposit of such proceeds to the Fund, unless within 60 days in advance of the reversion of such funds, the Director of OMB, in consultation with the Assistant Secretary for Communications and Information, notifies the appropriate committees of Congress that such funds are needed to complete or to implement current or future relocations or sharing initiatives.

"(B) DEFINITION.—In this paragraph, the term 'appropriate committees of Congress' means—

"(i) the Committee on Appropriations of the Senate;

"(ii) the Committee on Commerce, Science, and Transportation of the Senate;

"(iii) the Committee on Appropriations of the House of Representatives; and

"(iv) the Committee on Energy and Commerce of the House of Representatives.";

(4) in subsection (e)(2)—

(A) by inserting "and sharing" before "costs";

(B) by inserting "or sharing" before "is complete"; and

(C) by inserting "or sharing" before "in accordance"; and

(5) by adding at the end the following:

"(f) ADDITIONAL PAYMENTS FROM THE FUND.—Notwithstanding subsections (c) through (e), after the date of the enactment of the Public Safety Spectrum and Wireless Innovation Act, and following the credit of any amounts specified in subsection (b), there are hereby appropriated from the Fund and available to the Director of the OMB up to 10 percent of the amounts deposited in the Fund from the auction of licenses for frequencies of spectrum vacated by Federal entities, or up to 10 percent of the amounts deposited in the Fund by non-Federal entities for sharing of Federal spectrum. The Director of OMB, in consultation with the Assistant Secretary for Communications and Information, may use such amounts to pay eligible Federal entities for the purpose of encouraging timely access to such spectrum, provided that—

"(1) any such payment by the Director of OMB is based on the market value of the spectrum, the timeliness with which the licensee cleared its use of such spectrum, and the need for such spectrum in order for the Federal entity to conduct its essential missions;

"(2) any such payment by the Director of OMB is used to carry out the purposes specified in subparagraphs (A) through (F) of paragraph (3) of subsection 113(g) to achieve enhanced capability for those systems affected by reallocation of Federal spectrum to commercial use, or by sharing of Federal frequencies with non-Federal entities;

"(3) the amount remaining in the Fund after any such payment by the Director is not less than 10 percent of the winning bids in the relevant auction, or is not less than 10 percent of the payments from non-Federal entities in the relevant sharing agreement; and

"(4) any such payment by the Director shall not be made until 30 days after the Director has notified the Committees on Appropriations and Commerce, Science, and Transportation of the Senate, and the Committees on Appropriations and Energy and Commerce of the House of Representatives.".

(f) COMPETITIVE BIDDING; TREATMENT OF REVENUES.—Subparagraph (D) of section 309(j)(8) of the Communications Act of 1934 (47 U.S.C. 309(j)(8)) is amended by inserting "excluding frequencies identified by the Federal Communications Commission to be auctioned in conjunction with eligible frequencies described in section 113(g)(2)" before "shall be deposited".

(g) PUBLIC DISCLOSURE AND NONDISCLOSURE.—If the head of an executive agency of the Federal Government determines that public disclosure of any information contained in notifications and reports required by sections 113 or 118 of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 923 and 928) would reveal classified national security information or other information for which there is a legal basis for nondisclosure and such public disclosure would be detrimental to national security, homeland security, public safety, or jeopardize law enforcement investigations, the head of the executive agency shall notify the NTIA of that determination prior to release of such information. In that event, such classified information shall be included in a separate annex, as needed. These annexes shall be provided to the appropriate subcommittee in accordance with appropriate national security stipulations, but shall not be disclosed to the public or provided to any unauthorized person through any other means.

SEC. 515. REPORT ON SPECTRUM SHARING.

(a) IDENTIFICATION OF SPECTRUM; REPORT TO CONGRESS.—Not later than 1 year after the date of enactment of this Act, the NTIA shall conduct a study and submit a report to the appropriate committees of Congress—

(1) that identifies spectrum between 225 MHz and 3700 MHz operated or licensed by a Federal entity that the NTIA, in consultation with the Commission, determines appropriate for sharing with non-government entities or non-Federal government entities, including, after taking into account any spectrum identified by the NTIA in its October 2010 report entitled "An Assessment of the Near-Term Viability of Accommodating Wireless Broadband Systems in the 1675–1710 MHz, 1755–1780 MHz, 3500–3650 MHz, and 4200–4220 MHz, 4380–4400 MHz Bands", the additional 100 MHz most likely to be appropriate for wireless broadband operations; and

(2) on how Federal entities can utilize dynamic spectrum sharing technologies to allow non-government entities or non-Federal government entities to share underutilized spectrum without interference to the primary usage by the Federal Government of that spectrum, including through use of cognitive radio and sensing technologies and database and geolocation approaches.

(b) CONSIDERATIONS.—In carrying out the study and report required under subsection (a), the NTIA should consider—

(1) radio systems that are utilized in fixed or predictable geographic locations;

(2) radio systems that are only utilized intermittently at fixed or predictable times;

(3) spectrum allocations in which radio systems are currently not deployed; and

(4) spectrum that is harmonized regionally or globally.

(c) PUBLIC CONSULTATION AND RULE CHANGES.—

(1) IN GENERAL.—Not later than 6 months after the report required under subsection (a) is submitted, the NTIA shall conduct a public consultation and, with the Interdepartment Radio Advisory Committee, develop rules for Federal users to increase spectrum sharing by Federal entities.

(2) CONSIDERATIONS.—In carrying out the rulemaking required under paragraph (1), the NTIA shall consider—

(A) the findings of the report required under subsection (a); and

(B) the recommendations in the Final Report, dated November 8, 2010, issued by the

Interference and Dynamic Spectrum Access Subcommittee of the Commerce Spectrum Management Advisory Committee.

Subtitle C—Efficiency and Management

SEC. 521. FUNCTIONAL RESPONSIBILITY OF THE NTIA TO ENSURE EFFICIENT USE OF SPECTRUM.

Section 103(b)(2) of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 902(b)(2)) is amended—

(1) by redesignating subparagraphs (B) through (T) as subparagraphs (C) through (U), respectively; and

(2) by inserting after subparagraph (A) the following:

"(B) The responsibility to promote the best possible and most efficient use of electromagnetic spectrum resources across the Federal Government, subject to and consistent with the needs and missions of Federal agencies.".

SEC. 522. SPECTRUM EFFICIENCY ANALYTIC TOOLS.

(a) IN GENERAL.—Not later than 18 months after the date of enactment of this title, the NTIA, in consultation with NIST and the Commission, as appropriate, shall develop analytic tools or metrics for the NTIA and Federal entities to measure the spectrum efficiency of Federal spectrum systems used by such entities.

(b) REQUIRED CONSIDERATION.—In developing the tools or metrics to measure spectrum efficiency pursuant to subsection (a)(1), the NTIA shall consider the conclusions reached in the report entitled "Definitions of Efficiency in Spectrum Use", authored by the Commerce Spectrum Management Advisory Committee and dated October 1, 2008.

SEC. 523. STUDY ON RECEIVER PERFORMANCE AND SPECTRUM EFFICIENCY.

(a) IN GENERAL.—The Comptroller General of the United States shall conduct a study to consider efforts to ensure that each transmission system that employs radio spectrum is designed and operated so that reasonable use of adjacent spectrum does not excessively impair the functioning of such system.

(b) REQUIRED CONSIDERATIONS.—At a minimum, the study required under subsection (a) shall consider—

(1) the value of—

(A) improving receiver performance as it relates to increasing spectral efficiency;

(B) improving operation of services in adjacent frequencies; and

(C) narrowing the guard bands between adjacent spectrum use.

(2) the role of manufacturers, commercial licensees, and government users with respect to their transmission systems and use of adjacent spectrum described in snbsection (a);

(3) the feasibility of industry self-compliance with respect to the design and operational requirements of transmission systems and the reasonable nse of adjacent spectrum described in subsection (a); and

(4) the value of Commission and NTIA action to establish, by rule, technical requirements or standards for non-Federal or Federal use, respectively, with respect to the reasonable use of adjacent spectrum described in subsection (a).

(c) DEFINITION.—For purposes of this section, the term "transmission system" means any telecommunications, broadcast, satellite, commercial mobile service, or other communications system that employs radio spectrum.

(d) REPORT.—Not later than 1 year after the date of enactment of this Act, the Comptroller General of the United States shall submit a report to the appropriate committees of Congress on the results of the study required under subsection (a).

SEC. 524. FREQUENCY ASSIGNMENT.

(a) EXAMINATION.—Not later than 6 months after the date of enactment of this title, the NTIA, in consultation with the Interdepartment Radio Advisory Committee, shall—

(1) examine its freqnency assignment processes, including the 5-year frequency assignment review program, and

(2) consider best practices to determine if the current approach for collecting and validating data from Federal entities can be streamlined or improved to help ensure that such entities are managing current and future spectrum assignments efficiently.

(b) REQUIRED CONSIDERATIONS.—In carrying out the requirements of subsection (a), the NTIA shall consider—

(1) providing Federal entities with specific guidance or requirements on how to justify to the NTIA that requested spectrum frequency assignments would fulfill an established mission need and that other means of communication are not appropriate or available;

(2) requiring Federal entities to submit documentation, as part of the spectrum frequency assignment process;

(3) verifying that such entity has completed an analysis to support the use and need of the requested assignment; and

(4) requiring managers of spectrum resources at each Federal entity to validate, verify, or attest to the accuracy of spectrum information submitted by their entity to the NTIA.

SEC. 525. SPECTRUM OPPORTUNITY COST TRANSPARENCY.

(a) ANALYSIS OF ECONOMIC OPPORTUNITY COST.—

(1) DEVELOPMENT OF FRAMEWORK.—

(A) IN GENERAL.—Not later than 1 year after the date of enactment of this title, the NTIA, in consultation with the Commission and the Director of the Office of Management and Budget, shall develop a framework for determining the annual economic opportunity cost of each specific Federal spectrum band assigned or otherwise allocated for use by Federal entities.

(B) CONSIDERATIONS.—In developing the framework required under subparagraph (A), the NTIA shall take into account the spectrum pricing methodologies adopted by other countries which utilize administered incentive pricing of spectrum for government users.

(2) SCOPE.—The framework developed under paragraph (1) shall cover all federally allocated spectrum bands between 150 MHz and 6000 MHz, inclusive.

(3) GOALS.—The goal of the framework developed under paragraph (1) is—

(A) to provide Federal entities with a sustained long-term signal of spectrum value to inform the spectrum management decisions of such entities; and

(B) to provide the public with increased transparency about how Federal entities use a scarc physical resource.

(4) REQUIREMENTS.—The framework developed under paragraph (1) shall—

(A) define the term "opportunity cost" as the value of the spectrum, in dollar terms, as if such spectrum were to be reallocated to the highest commercial alternative use that currently does uot have access to that spectrum;

(B) be updated, on an annual basis, to take into account observed market valuations from spectrum auctions, secondary spectrum trading, and other market indicators of spectrum value;

(C) determine the opportunity costs borne by each Federal entity for each spectrum band that is entirely nnder the control of a single agency; and

(D) determine the opportunity costs for spectrum assigned or otherwise allocated to Federal entities for both primary use and secondary use.

(b) REPORT ON OPPORTUNITY COSTS.—Each Federal entity that has beeu assigned or otherwise allocated use of a Federal spectrum band shall report, as an off-budget item, the opportunity cost borne by the entity for each spectrum band the entity nses—

(1) in the budget of the entity to be included in the budget of the United States Government submitted by the President under section 1105 of title 31, United States Code; and

(2) in the annual financial statement of the entity required to be filed under section 3515 of title 31, Uuited States Code.

(c) SPECTRUM VALUE ANALYSIS.—Not later than 5 years after the date of the enactment of this title, and every 5 years thereafter, each Federal entity that has been assigned or otherwise allocated use of a Federal spectrum band, or otherwise utilizes such spectrum, shall engage in an analysis comparing the opportunity cost of that spectrum, as such cost is determined by the framework developed by the NTIA under subsection (a), to the projected costs of the entity relocating to other government spectrum holdings, co-locating with other government agencies, leasing other non-Federal spectrum, or contracting out for its spectrum activities.

(d) SPECTRUM TECHNOLOGY STUDY.—

(1) IN GENERAL.—Not later than 18 months after the date of the enactment of this title, and every 5 years thereafter, the Comptroller General of the United States, in consultation with NTIA, shall examine the technologies and equipment used by Federal entities operating on Federal spectrum allocations and determine if such technologies and equipment are the most spectrum efficient available.

(2) CERTAIN DETERMINATIONS MADE.—If the results of any study required under paragraph (1) determines that the technologies and equipment of Federal entities operating on Federal spectrum allocations are not the most spectrum efficient available, the Comptroller General shall determine—

(A) what the costs would be to upgrade such systems to more up-to-date and readily available systems;

(B) what benefits would be gained from upgrading, particularly any cost savings or increases in spectrum utilization efficiency; and

(C) if there are any possible problems with upgrading to more up-to-date systems.

SEC. 526. SYSTEM CERTIFICATION.

Not later than 6 months after the date of enactment of this title, the Director of the Office of Management and Budget shall update and revise section 33.4 of OMB Circular A–11 to reflect the recommendations regarding such Circular made in the Commerce Spectrum Management Advisory Committee Incentive Subcommittee report, adopted January 11, 2011.

SEC. 527. REPORT TO CONGRESS ON IMPROVING SPECTRUM MANAGEMENT.

Not later than 3 months after the date of enactment of this title, the NTIA shall submit to the appropriate committees of Congress a report on the status of the NTIA's plan to implement the recommendations contained in the "President's Memorandum on Improving Spectrum Management for the 21st Century", 49 Weekly Comp. Pres. Doc. 2875, Nov. 29, 2004.

SEC. 528. WIRELESS FACILITIES DEPLOYMENT.

(a) FACILITY MODIFICATIONS.—

(1) IN GENERAL.—Notwithstanding section 704 of the Telecommunications Act of 1996 or any other provision of law, a State or local government may not deny, and shall approve, any eligible facilities request for a modification of an existing wireless tower that does not substantially change the physical dimensions of such tower.

(2) ELIGIBLE FACILITIES REQUEST.—For purposes this subsectiou, the term "eligible facilities request" means any request for modification of an existing wireless tower that involves—

(A) collocation of new transmission equipment;

(B) removal of transmission equipment; and

(C) replacement of transmission equipment.

(b) FEDERAL EASEMENTS AND RIGHTS-OF-WAY.—

(1) GRANT.—If an executive agency, a State, a political subdivision or agency of a State, or a person, firm, or organization applies for the grant of an easement or rights-of-way to, in, over, or on a building owned by the Federal Government for the right to install, construct, and maintain wireless service

antenna structures and equipment, and backhaul transmission, the executive agency having control of the building may grant to the applicant, on behalf of the Federal Government, an easement or rights-of-way to perform such installation, construction, and maintenance.

(2) APPLICATION.—The Administrator of the General Services Administration shall develop a common form for rights-of-way applications required under paragraph (1) for all executive agencies that shall be used by applicants with respect to the buildings or property of each such agency.

(3) FEE.—

(A) IN GENERAL.—Notwithstanding any other provision of law, in making a grant of an easement or rights-of-way pursuant to paragraph (1), the Administrator of the General Services Administration shall establish a fee for the award of such grant that is based on direct cost recovery.

(B) EXCEPTIONS.—The Administrator of the General Services Administration may establish exceptions to the fee amount required under subparagraph (A)—

(i) in consideration of the public benefit provided by a grant of an easement or rights-of-way; and

(ii) in the interest of expanding wireless and broadband coverage.

(4) USE OF FEES COLLECTED.—Any fee amounts collected by an executive agency pursuant to paragraph (2) shall be made available, without further appropriation, to such agency for purposes of the agency's telecommunications and information technology needs and any excess funds shall then be deposited into the Federal Building Fund.

(c) MASTER CONTRACTS FOR WIRELESS TOWER SITINGS.—

(1) IN GENERAL.—Notwithstanding section 704 of the Telecommunications Act of 1996 or any other provision of law, and not later than 60 days after the date of enactment of this Act, the Administrator of the General Services Administration shall—

(A) develop 1 or more master contracts that shall govern the placement of wireless service antenna structures on buildings and property owned by the Federal Government; and

(B) in developing the master contract, with respect to the siting of wireless service antenna structures, standardize the treatment of the placement of wireless service antenna structures on rooftop or building facades, the placement of equipment on rooftops or inside buildings, and technology, and any other key issues that the Administrator determines appropriate.

(2) APPLICABILITY.—The master contract developed by the Administrator of the General Services Administration under paragraph (1) shall apply to all publicly accessible property owned by the Federal Government, unless the Administrator decides that issues with respect to the siting of a wireless service antenna structure on a specific building or property warrant nonstandard treatment of a specific property.

(3) APPLICATION.—The Administrator of the General Services Administration shall develop a common form or set of forms for wireless service antenna structure siting applications required under this section for all executive agencies that shall be used by applicants with respect to the buildings of each such agency.

TITLE VI—STUDIES ON NEXT GENERATION 9–1–1 SERVICES

SEC. 601. DEFINITIONS.

As used in this title, the following definitions shall apply:

(1) 9–1–1 SERVICES.—The term "9–1–1 services" includes both E9–1–1 services and Next Generation 9–1–1 services.

(2) E9–1–1 SERVICES.—The term "E9–1–1 services" means both phase I and phase II enhanced 9–1–1 services, as described in section 20.18 of the Commission's regulations (47 C.F.R. 20.18), as in effect on the date of enactment of this title, or as subsequently revised by the Commission.

(3) NEXT GENERATION 9–1–1 SERVICES.—The term "Next Generation 9–1–1 services" means an IP-based system comprised of hardware, software, data, and operational policies and procedures that—

(A) provides standardized interfaces from emergency call and message services to support emergency communications;

(B) processes all types of emergency calls, including voice, data, and multimedia information;

(C) acquires and integrates additional emergency call data useful to call routing and handling;

(D) delivers the emergency calls, messages, and data to the appropriate public safety answering point and other appropriate emergency entities;

(E) supports data or video communications needs for coordinated incident response and management; or

(F) provides broadband service to public safety answering points or other first responder entities.

(4) PUBLIC SAFETY ANSWERING POINT.—The term "public safety answering point" has the meaning given the term in section 222 of the Communications Act of 1934 (47 U.S.C. 222).

SEC. 602. NHTSA REPORT ON COSTS FOR REQUIREMENTS AND SPECIFICATIONS OF NEXT GENERATION 9-1-1 SERVICES.

(a) IN GENERAL.—Not later than 1 year after the date of enactment of this title, the Administrator of the National Highway Traffic Safety Administration, in consultation with the Commission and the Secretary of Homeland Security, shall prepare and submit a report to Congress that analyzes and determines detailed costs for specific Next Generation 9–1–1 service requirements and specifications.

(b) PURPOSE OF REPORT.—The purpose of the report required under subsection (a) is to serve as a resource for Congress as it considers creating a coordinated, long-term funding mechanism for the deployment and operation, accessibility, application development, equipment procurement, and training of personnel for Next Generation 9–1–1 services.

(c) REQUIRED INCLUSIONS.—The report required under subsection (a) shall include the following:

(1) How costs would be broken out geographically and/or allocated among public safety answering points, broadband service providers, and third-party providers of Next Generation 9–1–1 services.

(2) An assessment of the current state of Next Generation 9–1–1 service readiness among public safety answering points.

(3) How differences in public safety answering points' access to broadband across the country may affect costs.

(4) A technical analysis and cost study of different delivery platforms such as wireline, wireless, and satellite.

(5) An assessment of the architectural characteristics, feasibility, and limitations of Next Generation 9–1–1 service delivery.

(6) An analysis of the needs for Next Generation 9–1–1 service of persons with disabilities.

(7) Standards and protocols for Next Generation 9–1–1 service and for incorporating Voice over Internet Protocol and "Real-Time Text" standards.

SEC. 603. FCC RECOMMENDATIONS FOR LEGAL AND STATUTORY FRAMEWORK FOR NEXT GENERATION 9–1–1 SERVICES.

Not later than 1 year after the date of enactment of this title, the Commission, in coordination with the Secretary of Homeland Security and the Administrator of the National Highway Traffic Safety Administration, shall prepare and submit a report to Congress that contains recommendations for the legal and statutory framework for Next Generation 9–1–1 services, consistent with recommendations in the National Broadband Plan developed by the Commission pursuant to Public Law 111–5, including the following:

(1) A legal and regulatory framework for the development of Next Generation 9–1–1 services and the transition from legacy 9–1–1 to Next Generation 9–1–1 networks.

(2) Legal mechanisms to ensure efficient and accurate transmission of 9–1–1 caller information to emergency response agencies.

(3) Recommendations for removing jurisdictional barriers and inconsistent legacy regulations including—

(A) proposals that would require States to remove regulatory roadblocks to Next Generation 9–1–1 services development, while recognizing existing State authority over 9–1–1 services;

(B) eliminating outdated 9–1–1 regulations at the Federal level; and

(C) preempting inconsistent State regulations.

TITLE VII—MISCELLANEOUS

SEC. 701. SEVERABILITY.

If any provision of this Act or an amendment made by this Act, or the application of the provision to any person or circumstance, is held to be unconstitutional, the remainder of this Act and the amendments made by this Act, and the application of the provisions of this Act and the amendments made by this Act to any other person or circumstance, shall not be affected thereby.

SEC. 702. RULE OF CONSTRUCTION.

Nothing in this Act shall be construed as adding or subtracting from the authority the Commission may or may not have to regulate broadband Internet access service.

○

[DISCUSSION DRAFT]

112TH CONGRESS
1ST SESSION

H. R. ______

To provide for the creation of a public safety broadband network, to ensure a more efficient and innovative allocation of the electromagnetic spectrum, to permit the Federal Communications Commission to conduct incentive auctions, and for other purposes.

IN THE HOUSE OF REPRESENTATIVES

M__. ____________ introduced the following bill; which was referred to the Committee on ____________________________

A BILL

To provide for the creation of a public safety broadband network, to ensure a more efficient and innovative allocation of the electromagnetic spectrum, to permit the Federal Communications Commission to conduct incentive auctions, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE; TABLE OF CONTENTS.

(a) SHORT TITLE.—This Act may be cited as the "Public Safety Broadband and Wireless Innovation Act of 2011".

(b) TABLE OF CONTENTS.—The table of contents of this Act is as follows:

SEC. 2. DEFINITIONS.

In this Act:

(1) 700 MHZ D BLOCK SPECTRUM.—The term "700 MHz D block spectrum" means the portion of the electromagnetic spectrum between the frequencies from 758 megahertz to 763 megahertz and between the frequencies from 788 megahertz to 793 megahertz.

(2) APPROPRIATE COMMITTEES OF CONGRESS.—Except as otherwise specifically provided, the term "appropriate committees of Congress" means—

(A) the Committee on Commerce, Science, and Transportation of the Senate; and

(B) the Committee on Energy and Commerce of the House of Representatives.

(3) ASSISTANT SECRETARY.—The term ''Assistant Secretary'' means the Assistant Secretary of Commerce for Communications and Information.

(4) COMMERCIAL MOBILE DATA SERVICE.—The term ''commercial mobile data service'' means any mobile service (as defined in section 3 of the Communications Act of 1934 (47 U.S.C. 153))—

(A) that is—

(i) a data service, which may include Internet Protocol-based applications;

(ii) provided for profit; and

(iii) available to the public or to such classes of eligible users as to be effectively available to the public; and

(B) that is not interconnected with the public switched network.

(5) COMMERCIAL MOBILE SERVICE.—The term ''commercial mobile service'' has the meaning given such term in section 332(d)(1) of the Communications Act of 1934 (47 U.S.C. 332(d)(1)).

(6) COMMERCIAL STANDARDS.—The term ''commercial standards'' means the technical standards followed by the commercial mobile service and commercial mobile data service industries for network, device, and Internet Protocol connectivity.

Such term includes standards developed by the Third Generation Partnership Project (3GPP), the Institute of Electrical and Electronics Engineers (IEEE), the Alliance for Telecommunications Industry Solutions (ATIS), and the Internet Engineering Task Force (IETF).

(7) COMMISSION.—The term ''Commission'' means the Federal Communications Commission.

(8) CORE NETWORK.—The term ''core network'' means the core network described in section 202(b)(1).

(9) FEDERAL ENTITY.—The term ''Federal entity'' has the meaning given such term in section 113(i) of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 923(i)).

(10) GOVERNOR.—The term ''Governor'' means the Governor or other chief executive officer of a State.

(11) GUARD BAND SPECTRUM.—The term ''guard band spectrum'' means the portion of the electromagnetic spectrum between the frequencies from 768 megahertz to 769 megahertz and between the frequencies from 798 megahertz to 799 megahertz.

(12) INDIAN TRIBE.—The term ''Indian tribe'' has the meaning given such term in section 4 of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 450b).

(13) NARROWBAND SPECTRUM.—The term ''narrowband spectrum'' means the portion of the electromagnetic spectrum between the frequencies from 769 megahertz to 775 megahertz and between the frequencies from 799 megahertz to 805 megahertz.

(14) NIST.—The term ''NIST'' means the National Institute of Standards and Technology.

(15) NTIA.—The term ''NTIA'' means the National Telecommunications and Information Administration.

(16) PROGRAM MANAGEMENT OFFICE.—The term ''Program Management Office'' means the office established under section 203(a).

(17) PUBLIC SAFETY ANSWERING POINT.—The term ''public safety answering point'' has the meaning given such term in section 222 of the Communications Act of 1934 (47 U.S.C. 222).

(18) PUBLIC SAFETY BROADBAND NETWORK.—The term ''public safety broadband network'' means the network described in section 202.

(19) PUBLIC SAFETY BROADBAND NETWORK CORPORATION.—The term "Public Safety Broadband Network Corporation" or "Corporation" means the corporation established under section 201(a)(1).

(20) PUBLIC SAFETY BROADBAND SPECTRUM.—The term "public safety broadband spectrum" means—

(A) the portion of the electromagnetic spectrum between the frequencies from 763 megahertz to 768 megahertz and between the frequencies from 793 megahertz to 798 megahertz; and

(B) the 700 MHz D block spectrum.

(21) PUBLIC SAFETY COMMUNICATIONS RESEARCH PROGRAM.—The term "Public Safety Communications Research Program" means the program that is housed within the Department of Commerce Labs in Boulder, Colorado, and that is a joint effort between the Office of Law Enforcement Standards of NIST and the Institute for Telecommunication Sciences of the NTIA.

(22) PUBLIC SAFETY ENTITY.—The term "public safety entity" means an entity that provides public safety services.

(23) PUBLIC SAFETY SERVICES.—The term "public safety services" has the meaning given such term in section 337(f)(1) of the Communications Act of 1934 (47 U.S.C. 337(f)(1)).

(24) RADIO ACCESS NETWORK.—The term "radio access network" means a radio access network described in section 202(b)(2).

(25) STATE.—The term "State" means any of the 50 States, the District of Columbia, the Commonwealth of Puerto Rico, the United States Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands.

(26) STATE PUBLIC SAFETY BROADBAND OFFICE.—The term "State Public Safety Broadband Office" means an office established under section 212(d).

(27) TRIBAL.—The term "tribal" means, when used with respect to any entity, that such entity is a tribal organization (as defined in section 4 of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 450b)).

SEC. 3. RULE OF CONSTRUCTION.

Each range of frequencies described in this Act shall be construed to be inclusive of the upper and lower frequencies in the range.

SEC. 4. ENFORCEMENT.

(a) IN GENERAL.—The Commission shall enforce this Act as if this Act were a part of the Communications Act of 1934 (47 U.S.C. 151 et seq.). A violation of this Act, or a regulation promulgated under this Act, shall be considered to be a violation of the Communications Act of 1934, or a regulation promulgated under such Act, respectively.

(b) EXCEPTION.—Subsection (a) does not apply in the case of a provision of this Act that is expressly required to be carried out by an agency (as defined in section 551 of title 5, United States Code) other than the Commission.

TITLE I—ALLOCATION AND ASSIGNMENT OF PUBLIC SAFETY BROADBAND SPECTRUM

SEC. 101. REALLOCATION OF 700 MHZ D BLOCK SPECTRUM FOR PUBLIC SAFETY USE.

(a) IN GENERAL.—The Commission shall reallocate the 700 MHz D block spectrum for use by public safety entities in accordance with the provisions of this Act.

(b) QUANTITY OF SPECTRUM ALLOCATED FOR PUBLIC SAFETY USE.—Section 337(a) of the Communications Act of 1934 (47 U.S.C. 337(a)) is amended—

(1) by striking "Not later than January 1, 1998, the" and inserting "The";

(2) in paragraph (1), by striking "24" and inserting "34"; and

(3) in paragraph (2), by striking "36" and inserting "26".

SEC. 102. ASSIGNMENT OF LICENSE TO CORPORATION.

(a) IN GENERAL.—Not later than the date that is 30 days after the date of the incorporation of the Public Safety Broadband Network Corporation under section 201(a), the Commission shall assign a single license for the public safety broadband spectrum and the guard band spectrum to the Corporation for the purpose of ensuring the construction, management, maintenance, and operation of the public safety broadband network.

(b) TERM.—

(1) INITIAL LICENSE.—The initial license assigned under subsection (a) shall be for a term of 10 years.

(2) RENEWAL OF LICENSE.—Prior to the expiration of the term of the initial license assigned under subsection (a) or the expiration of any renewal of such license, the Corporation shall submit to the Commission an application for the renewal of such license in accordance with the Communications Act of 1934 (47 U.S.C. 151 et seq.) and any applicable Commission regulations. Such renewal applica-

tion shall demonstrate that, during the term of the license that the Corporation is seeking to renew, the Corporation has fulfilled its duties and obligations under this Act and the Communications Act of 1934 and has complied with all applicable Commission regulations. A renewal of the initial license granted under subsection (a) or any renewal of such license shall be for a term not to exceed 10 years.

(c) DEFINITION OF PUBLIC SAFETY SERVICES.—Section 337(f)(1)(B) of the Communications Act of 1934 (47 U.S.C. 337(f)(1)(B)) is amended to read as follows:

"(B) that are provided by emergency response providers, as such term is defined in section 2 of the Homeland Security Act of 2002 (6 U.S.C. 101), except that such term—

"(i) shall include personnel, agencies, and authorities of tribal organizations (as defined in section 4 of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 450b)); and

"(ii) shall not include personnel, agencies, or authorities of the Federal Government; and".

SEC. 103. ENSURING EFFICIENT AND FLEXIBLE USE OF 700 MHZ PUBLIC SAFETY NARROWBAND SPECTRUM.

(a) LICENSE RENEWAL REQUIREMENTS.—The Commission may not renew any license to use the narrowband spectrum after the date of the enactment of this Act unless the licensee demonstrates that failure of the Commission to renew such license will—

(1) cause considerable economic hardship; or

(2) adversely impact the ability of the licensee to provide public safety services.

(b) INVENTORY.—Not later than 6 months after the date of the enactment of this Act, the Commission shall complete and submit to the appropriate committees of Congress a State-by-State inventory of the use of the narrowband spectrum, current as of such date of enactment, including the numbers of base stations that are deployed and in day-to-day operation, the approximate number of users, the extent of interoperability among the deployed stations, and the approximate per-unit costs of mobile equipment.

(c) FLEXIBLE USE.—In order to promote efficient spectrum use, the Commission may allow the narrowband spectrum and the guard band spectrum to be used in a flexible manner, including for public safety broadband communications, subject to such technical and interference protection measures as the Commission may require.

SEC. 104. SHARING OF PUBLIC SAFETY BROADBAND SPECTRUM AND NETWORK.

(a) EMERGENCY ACCESS BY NON-PUBLIC SAFETY ENTITIES.—

(1) IN GENERAL.—Upon the request of a State Public Safety Broadband Office, the Corporation may enter into agreements with entities in such State that are not public safety entities to permit such entities to obtain access on a secondary, preemptible basis to the public safety broadband spectrum in order to facilitate interoperability between such entities and public safety entities in protecting the safety of life, health, and property during emergencies and during preparation for and recovery from emergencies, including during emergency drills, exercises, and tests.

(2) PREEMPTION.—The Corporation shall ensure that, under any agreements entered into under paragraph (1), public safety entities may preempt use of the public safety broadband spectrum by the entities with which the Corporation has entered into such agreements.

(b) PUBLIC-PRIVATE PARTNERSHIPS.—The Corporation may permit a private entity with which the Corporation contracts on behalf of public safety entities to construct, manage, maintain, or operate the core network or a radio access network, upon the request of such private entity, to—

(1) obtain access on a secondary basis to the public safety broadband spectrum for services that are not public safety services; or

(2) share equipment or infrastructure of the public safety broadband network, including antennas and towers.

(c) APPROVAL BY COMMISSION.—The Corporation may not enter into an agreement under subsection (a) or (b)(1) without the approval of the Commission.

(d) REINVESTMENT.—The Corporation shall use any funds the Corporation receives under the agreements entered into under subsections (a) and (b) to cover the administrative expenses of the Corporation for the fiscal year in which such funds are received and shall use any excess for the construction, management, maintenance, and operation of the public safety broadband network.

(e) ACCESS BY FEDERAL DEPARTMENTS AND AGENCIES.—The Corporation shall enter into such written agreements as are necessary to permit Federal departments and agencies to have shared access to the public safety broadband spectrum in order to protect the safety of life, health, and property.

(f) PROHIBITION ON OFFERING COMMERCIAL SERVICES.—The Corporation may not offer, provide, or market commercial telecommunications services or information services directly to the public.

SEC. 105. COMMISSION RULES.

(a) IN GENERAL.—In order to carry out the provisions of this Act, the Commission shall—

(1) adopt technical rules necessary to sufficiently manage spectrum use in bands adjacent to the public safety broadband spectrum;

(2) adopt rules requiring commercial mobile service providers and commercial mobile data service providers to offer roaming and priority access services to public safety entities at commercially reasonable terms and conditions if—

(A) the equipment of the public safety entity is technically compatible with the network of the commercial provider;

(B) the commercial provider is reasonably compensated; and

(C) such access does not unreasonably preempt or otherwise terminate or degrade existing voice conversations or data sessions;

(3) adopt technical rules governing the operation of the public safety broadband network in areas near the international borders of the United States;

(4) adopt rules ensuring the commercial availability of devices capable of operating in the public safety broadband spectrum, known as Band Class 14, at costs comparable to those of similar devices that are designed to operate in spectrum allocated for commercial use; and

(5) consider the adoption of such other rules as the Commission determines are necessary.

(b) DEADLINE.—The Commission shall adopt the rules required by paragraphs (1) through (4) of subsection (a) not later than 180 days after the date of the enactment of this Act.

(c) CONSULTATION.—In adopting rules under subsection (a) (or considering the adoption of rules under paragraph (5) of such subsection), the Commission shall consult with the Director of the Office of Emergency Communications in the Department of Homeland Security, the

Assistant Secretary, the Director of NIST, and the Public Safety Communications Research Program.

SEC. 106. FCC REPORT ON EFFICIENT USE OF PUBLIC SAFETY SPECTRUM.

(a) IN GENERAL.—Not later than 180 days after the date of the enactment of this Act and every 2 years thereafter, the Commission shall, in consultation with the Assistant Secretary and the Director of NIST, conduct a study and submit to the appropriate committees of Congress a report on the spectrum allocated for public safety use.

(b) CONTENTS.—The report required by subsection (a) shall include—

(1) an examination of how such spectrum is being used;

(2) recommendations on how such spectrum may be used more efficiently;

(3) an assessment of the feasibility of public safety entities relocating from other bands to the public safety broadband spectrum; and

(4) an assessment of whether any spectrum made available by the relocation described in paragraph (3) could be returned to the Commission for reassignment through auction, including through use of incentive auction authority under subparagraph

(G) of section 309(j)(8) of the Communications Act of 1934 (47 U.S.C. 309(j)(8)), as added by section 302(a).

TITLE II—ADVANCED PUBLIC SAFETY COMMUNICATIONS

Subtitle A—Public Safety Broadband Network

SEC. 201. ESTABLISHMENT AND OPERATION OF PUBLIC SAFETY BROADBAND NETWORK CORPORATION.

(a) ESTABLISHMENT.—

(1) IN GENERAL.—There is authorized to be established a private, nonprofit corporation to be known as the Public Safety Broadband Network Corporation, which will not be an agency or establishment of the United States Government or the District of Columbia government.

(2) GOVERNING LAW.—The Corporation shall be subject to the provisions of this Act, and to the extent consistent with this Act, to the District of Columbia Nonprofit Corporation Act (sec. 29–301.01 et seq., D.C. Official Code). The Corporation shall have the usual powers conferred upon a nonprofit corporation by the District of Columbia Nonprofit Corporation Act.

(3) INCORPORATION.—The members of the initial Board of Directors of the Corporation shall serve as the incorporators of the Corporation and shall take the necessary steps to establish the Corporation under the District of Columbia Nonprofit Corporation Act.

(4) INITIAL BYLAWS.—The members of the initial Board of Directors of the Corporation shall establish the initial bylaws of the Corporation.

(5) RESIDENCE.—The Corporation shall have its place of business in the District of Columbia and shall be considered, for purposes of venue in civil actions, to be a resident of the District of Columbia.

(b) BOARD OF DIRECTORS.—

(1) MEMBERSHIP AND APPOINTMENT.—The management of the Corporation shall be vested in a Board of Directors, which shall consist of 15 members, as follows:

(A) FEDERAL MEMBERS.—Four Federal members, or their designees, as follows:

(i) The Secretary of Commerce.

(ii) The Secretary of Homeland Security.

(iii) The Director of NIST.

(iv) The Attorney General of the United States.

(B) NON-FEDERAL PUBLIC-SECTOR MEMBERS.—Seven non-Federal public-sector members, representing both urban and rural interests, appointed by the Secretary of Commerce, as follows:

(i) STATE GOVERNORS.—Two members, each of whom is the Governor of a State, or their designees.

(ii) LOCAL AND TRIBAL GOVERNMENT MEMBERS.—Two members, each of whom is the chief executive officer of a political subdivision of a State or an Indian tribe, or their designees.

(iii) PUBLIC SAFETY ENTITY EMPLOYEES.—Three members, each of whom is employed by a public safety entity and possesses one or more of the following qualifications:

(I) Experience with emergency preparedness and response.

(II) Technical expertise with public safety radio communications.

(III) Operational experience with 9–1–1 emergency services.

(IV) Training in hospital or urgent medical care.

(C) PRIVATE-SECTOR MEMBERS.—Four private-sector members, appointed by the Secretary of Commerce, each of whom is employed by a private entity that has extensive experience implementing commercial standards in the design, development, and operation of commercial mobile data service networks.

(2) INDEPENDENCE OF NON-FEDERAL PUBLIC-SECTOR AND PRIVATE-SECTOR MEMBERS.—

(A) IN GENERAL.—Each non-Federal public-sector member and each private-sector member of the Board of Directors appointed under paragraph (1) shall be independent and neutral.

(B) INDEPENDENCE DETERMINATION.—In order to be considered independent for purposes of this paragraph, a member of the Board—

(i) may not, other than in the capacity of such member as a member of the Board or a committee thereof, accept any consulting, advisory, or other compensatory fee from the Corporation; and

(ii) shall be disqualified from any deliberation involving any transaction of the Corporation in which such member has a financial interest in the outcome.

(3) FEDERAL EMPLOYMENT STATUS.—The non-Federal public-sector members and the private-sector members of the Board of Directors shall not, by reason of membership on the Board, be considered to be officers or employees of the United States Government or the District of Columbia government.

(4) CITIZENSHIP.—Each non-Federal public-sector member and each private-sector member of the Board of Directors shall be a citizen of the United States.

(5) TERMS OF APPOINTMENT.—

(A) INITIAL APPOINTMENT DEADLINE.—The initial non-Federal public-sector members and the initial private-sector members of the Board of Directors shall be appointed not later than 180 days after the date of the enactment of this Act.

(B) TERMS.—

(i) LENGTH.—

(I) FEDERAL MEMBERS.—Each Federal member of the Board of Directors shall serve as a member of the Board for the life of the Corporation.

(II) NON-FEDERAL PUBLIC-SECTOR AND PRIVATE-SECTOR MEMBERS.—The term of office of each non-Federal public-sector member and each private-sector member of the Board of Directors shall be 3 years. Such a member may not serve more than 2 consecutive full 3-year terms.

(ii) EXPIRATION OF TERM.—Any non-Federal public-sector member or private-sector member of the Board of Directors whose term has expired may serve until such member's successor has taken office, or until the end of the calendar year in which such member's term has expired, whichever is earlier.

(iii) APPOINTMENT TO FILL VACANCY.—A non-Federal public-sector member or private-sector member of the Board of Directors appointed to fill a vacancy occurring prior to the expiration of the term for which that member's predecessor was appointed shall be appointed for the remainder of the predecessor's term.

(iv) STAGGERED TERMS.—With respect to the initial non-Federal public-sector members and the initial private-sector members of the Board of Directors—

(I) four members shall serve for a term of 3 years;

(II) four members shall serve for a term of 2 years; and

(III) three members shall serve for a term of 1 year.

(C) EFFECT OF VACANCIES.—A vacancy in the membership of the Board of Directors shall not affect the Board's powers and shall be filled in the same manner as the original member was appointed.

(6) CHAIR.—

(A) SELECTION.—The Chair of the Board of Directors shall be selected by the Secretary of Commerce from among the non-Federal public-sector members and the private-sector members of the Board.

(B) TERM.—The term of office of the Chair of the Board of Directors shall be 2 years, and an individual may not serve more than 2 consecutive terms.

(7) REMOVAL.—

(A) BY SECRETARY OF COMMERCE.—The Secretary of Commerce may remove, for good cause—

(i) the Chair of the Board of Directors; or

(ii) any non-Federal public-sector member or private-sector member of the Board of Directors.

(B) BY BOARD.—The members of the Board of Directors may, by majority vote—

(i) remove any non-Federal public-sector member or private-sector member of the Board for conduct determined by the Board to be detrimental to the Board or to the Corporation; or

(ii) request that the Secretary of Commerce exercise his or her authority to remove the Chair of the Board for conduct determined to be detrimental to the Board or to the Corporation.

(8) MEETINGS.—

(A) FREQUENCY.—The Board of Directors shall meet in accordance with the bylaws of the Corporation—

(i) at the call of the Chair of the Board; and

(ii) not less frequently than once each quarter.

(B) TRANSPARENCY.—Meetings of the Board of Directors, and meetings of any committees of the Board, shall be open to the public. The Board may, by majority vote, close any such meeting only for the time necessary to preserve the confidentiality of commercial or financial information that is privileged or confidential, to discuss personnel matters, or to discuss legal matters affecting the Corporation, including pending or potential litigation.

(9) QUORUM.—Eight members of the Board of Directors, including not fewer than 6 non-Federal public-sector members or private-sector members, shall constitute a quorum.

(10) ATTENDANCE.—Members of the Board of Directors may attend meetings of the Corporation and vote in person, via telephone conference, or via video conference.

(11) BYLAWS.—A majority of the members of the Board of Directors may amend the bylaws of the Corporation.

(12) PROHIBITION AGAINST COMPENSATION.—A member of the Board of Directors shall serve without pay, and shall not otherwise benefit, directly or indirectly, as a result of the member's service to the Corporation, but shall be allowed a per diem allowance for travel expenses, at rates authorized for an employee of an agency under subchapter I of chapter 57 of title 5, United States Code, while away from the home or regular place of business of the member in the performance of the duties of the Corporation.

(c) CHIEF EXECUTIVE OFFICER AND EMPLOYEES.—

(1) IN GENERAL.—The Corporation shall have 1 officer, a Chief Executive Officer, and such employees as may be necessary to carry out the duties and responsibilities of the Corporation under this title and title I, for such terms, and at such rates of compensation in accordance with paragraph (5), as the Board of Directors of the Corporation considers appropriate. The Chief Executive Officer and the employees shall serve at the pleasure of the Board of Directors.

(2) QUALIFICATIONS OF CEO.—The Chief Executive Officer shall have extensive experience in the deployment, management, or design of commercial mobile data service networks.

(3) CITIZENSHIP.—The Chief Executive Officer and the employees of the Corporation shall be citizens of the United States.

(4) NONPOLITICAL NATURE OF APPOINTMENT.—No political test or qualification may be used in selecting, appointing, promoting, or taking other personnel actions with respect to the Chief Executive Officer or the agents or employees of the Corporation.

(5) COMPENSATION.—

(A) IN GENERAL.—The Board of Directors may fix the compensation of the Chief Executive Officer and the employees hired under this subsection, as necessary to carry out the duties and responsibilities of the Corporation under this title and title I, except that—

(i) the rate of compensation for the Chief Executive Officer or any employee may not exceed the maximum rate of basic pay established under section 5382 of title

5, United States Code, for a member of the Senior Executive Service; and

(ii) notwithstanding any other provision of law except clause (i), or any bylaw of the Corporation, all rates of compensation, including benefit plans and salary ranges, for the Chief Executive Officer and the employees shall be jointly approved by a majority of the Federal members of the Board.

(B) LIMITATION ON OTHER COMPENSATION.—Neither the Chief Executive Officer nor any employee of the Corporation may receive any salary or other compensation (except for compensation for services on boards of directors of other organizations that do not receive funds from the Corporation, on committees of such boards, and in similar activities for such organizations) from any sources other than the Corporation for services rendered during the period of the employment of the Chief Executive Officer or employee, respectively, by the Corporation.

(C) SERVICE ON OTHER BOARDS.—Service by the Chief Executive Officer or any employee of the Corporation on a board of directors of another organization, on a committee of such a board, or in a similar activity for such an organization shall be subject to annual advance approval by the Board of Directors.

(D) FEDERAL EMPLOYMENT STATUS.—Neither the Chief Executive Officer nor any employee of the Corporation shall be considered to be an officer or employee of the United States Government or the District of Columbia government.

(d) SELECTION OF AGENTS, CONSULTANTS, AND EXPERTS.—

(1) IN GENERAL.—The Board shall select parties to serve as its agents, consultants, and experts in a fair, transparent, and objective manner.

(2) FINAL AND BINDING.—If the selection of an agent, consultant, or expert satisfies the requirements of paragraph (1), the selection of such agent, consultant, or expert shall be final and binding.

(e) NONPROFIT AND NONPOLITICAL NATURE OF CORPORATION.—

(1) STOCK.—The Corporation shall have no power to issue any shares of stock, or to declare or pay any dividends.

(2) PROFIT.—No part of the income or assets of the Corporation shall inure to the benefit of any director, officer, employee, or any other individual associated with the Corporation, except as salary or reasonable compensation for services.

(3) POLITICS.—The Corporation may not contribute to or otherwise support any political party or candidate for elective public office.

(4) PROHIBITION ON LOBBYING ACTIVITIES.—The Corporation may not engage in lobbying activities (as defined in section 3(7) of the Lobbying Disclosure Act of 1995 (2 U.S.C. 1602(7))).

(f) GENERAL POWERS.—In addition to the powers granted to the Corporation by any other provision of law, the Corporation shall have the authority to do the following:

(1) To adopt and use a corporate seal.

(2) To have succession until dissolved by an Act of Congress.

(3) To prescribe, through the actions of the Board of Directors, bylaws not inconsistent with Federal law and the laws of the District of Columbia, regulating the manner in which the Corporation's general business may be conducted and the

manner in which the privileges granted to the Corporation by law may be exercised.

(4) To exercise, through the actions of the Board of Directors, all powers specifically granted to the Corporation by the provisions of this title and title I, and such incidental powers as shall be necessary.

(5) To hold such hearings, sit and act at such times and places, take such testimony, and receive such evidence as the Corporation considers necessary to carry out its responsibilities and duties.

(6) To obtain grants and funds from and make contracts with individuals, private companies, organizations, institutions, and Federal, State, regional, and local agencies.

(7) To accept, hold, administer, and utilize gifts, donations, and bequests of property, both real and personal, for the purposes of aiding or facilitating the work of the Corporation.

(8) To spend amounts obtained under paragraph (6) in a manner authorized by the Board, but only for purposes that will advance or enhance public safety communications consistent with this Act.

(9) To establish reserve accounts with funds that the Corporation may receive from time to time

that exceed the amounts required by the Corporation to timely pay its debt service and other obligations.

(10) To expend the funds placed in any reserve accounts established under paragraph (9) (including interest earned on any such amounts) in a manner authorized by the Board, but only for purposes that—

(A) will advance or enhance public safety communications consistent with this Act; or

(B) are otherwise approved by an Act of Congress.

(11) To take such other actions as the Corporation, through the Board of Directors, may from time to time determine necessary, appropriate, or advisable to accomplish the purposes of this title and title I.

(g) PRINCIPAL POWERS.—In addition to the powers granted to the Corporation by any other provision of law, the Corporation shall have the power—

(1) to hold the single license for the public safety broadband spectrum and the guard band spectrum assigned by the Commission under section 102(a);

(2) to take all actions necessary to ensure the construction, management, maintenance, and oper-

ation of the public safety broadband network, in consultation with Federal users of the network, public safety entities, the Commission, and the Technical and Operations Advisory Body established under subsection (h), including by—

(A) ensuring the use of commercial standards;

(B) issuing open, transparent, and competitive requests for proposals to private-sector entities for the purpose of constructing, managing, maintaining, and operating the public safety broadband network;

(C) entering into and overseeing the performance of contracts or agreements with private-sector entities to construct, manage, maintain, and operate the public safety broadband network;

(D) leveraging, to the maximum extent possible, existing commercial, private, and public wireless network infrastructure to reduce costs, supplement network capacity, and speed deployment of the network;

(E) entering into roaming and priority access agreements with providers of commercial mobile service and commercial mobile data service to allow users of the public safety broadband network to obtain such services across the networks of such providers;

(F) entering into sharing agreements under section 104; and

(G) exercising discretion in using and disbursing the funds received under section 401(b)(5); and

(3) to establish the Program Management Office and delegate functions to such Office, in accordance with section 203.

(h) TECHNICAL AND OPERATIONS ADVISORY BODY.—

(1) ESTABLISHMENT.—In addition to such other standing or ad hoc committees, panels, or councils as the Board of Directors considers necessary, the Corporation shall establish a Technical and Operations Advisory Body, which shall provide advice to the Corporation with respect to operational and technical matters related to public safety communications and commercial mobile data service.

(2) MEMBERSHIP.—The Technical and Operations Advisory Body shall be composed of such representatives as the Board of Directors considers appropriate, including representatives of the following:

(A) Public safety entities.

(B) State, local, and tribal entities that use the public safety broadband network.

(C) Public safety answering points.

(D) One or more of the 10 regional organizational units of the Federal Emergency Management Agency.

(E) The Bureau of Indian Affairs.

(F) The Office of Science and Technology Policy.

(G) The Public Safety Communications Research Program.

(H) Providers of commercial mobile data service and vendors of equipment, devices, and software used to provide and access such service.

(i) AUDITS AND REPORTS BY GAO.—

(1) AUDITS.—

(A) IN GENERAL.—The financial transactions of the Corporation for any fiscal year during which Federal funds are available to finance any portion of its operations shall be audited annually by the Comptroller General of the United States in accordance with the principles and procedures applicable to commercial corporate transactions and under such rules and regulations as may be prescribed by the Comptroller General.

(B) LOCATION.—Any audit conducted under subparagraph (A) shall be conducted at the place or places where accounts of the Corporation are normally kept.

(C) ACCESS TO CORPORATION BOOKS AND DOCUMENTS.—

(i) IN GENERAL.—For purposes of an audit conducted under subparagraph (A), the representatives of the Comptroller General shall—

(I) have access to all books, accounts, records, reports, files, and all other papers, things, or property belonging to or in use by the Corporation that pertain to the financial transactions of the Corporation and are necessary to facilitate the audit; and

(II) be afforded full facilities for verifying transactions with the balances or securities held by depositories, fiscal agents, and custodians.

(ii) REQUIREMENT.—All books, accounts, records, reports, files, papers, and property of the Corporation shall remain in the possession and custody of the Corporation.

(2) REPORTS.—

(A) IN GENERAL.—The Comptroller General of the United States shall submit a report of each audit conducted under paragraph (1)(A) to—

(i) the appropriate committees of Congress;

(ii) the President; and

(iii) the Corporation.

(B) CONTENTS.—Each report submitted under subparagraph (A) shall contain—

(i) such comments and information as the Comptroller General determines necessary to inform Congress of the financial operations and condition of the Corporation;

(ii) any recommendations of the Comptroller General relating to the financial operations and condition of the Corporation; and

(iii) a description of any program, expenditure, or other financial transaction or undertaking of the Corporation that was observed during the course of the audit, which, in the opinion of the Comptroller General, has been carried on or made without the authority of law.

(j) ANNUAL REPORT TO CONGRESS.—

(1) IN GENERAL.—Not later than 1 year after the date of enactment of this Act, and each year thereafter, the Corporation shall submit an annual report covering the preceding fiscal year to the appropriate committees of Congress.

(2) REQUIRED CONTENT.—The report required under paragraph (1) shall include—

(A) a comprehensive and detailed report of the operations, activities, financial condition, and accomplishments of the Corporation under this section;

(B) an analysis of the continued need for the Program Management Office and opportunities for reductions in staffing levels or scope of work in light of progress made in network deployment, including the requests for proposals process; and

(C) such recommendations or proposals for legislative or administrative action as the Corporation considers appropriate.

(3) AVAILABILITY TO TESTIFY.—The directors, employees, and agents and the Chief Executive Officer of the Corporation shall be available to testify before the appropriate committees of the Congress with respect to—

(A) the report required under paragraph (1);

(B) the report of any audit made by the Comptroller General under subsection (i); or

(C) any other matter which such committees may consider appropriate.

(k) PROHIBITION AGAINST NEGOTIATION WITH FOREIGN GOVERNMENTS.—The Corporation may not negotiate or enter into any agreements with a foreign government on behalf of the United States.

(l) USE OF MAILS.—The Corporation may use the United States mails in the same manner and under the same conditions as the departments and agencies of the United States.

SEC. 202. PUBLIC SAFETY BROADBAND NETWORK.

(a) ESTABLISHMENT.—The Corporation shall ensure the establishment of a public safety broadband network.

(b) NETWORK COMPONENTS.—The public safety broadband network shall consist of the following:

(1) A core network that—

(A) consists of national and regional data centers and elements and nodes based on commercial standards; and

(B) provides the connectivity between—

(i) the radio access networks; and

(ii) the public Internet or the public switched network, or both.

(2) Radio access networks—

(A) that consist of all cell site equipment, antennas, and backhaul equipment, based on commercial standards, that are required to enable wireless communications with devices using the public safety broadband spectrum; and

(B) each of which shall be developed, constructed, managed, maintained, and operated taking into account the plans developed in the State, local, and tribal planning and implementation grant program under section 212.

(c) DEPLOYMENT STANDARDS.—The Corporation shall, through the administration of the requests-for-proposals process and oversight of contracts delegated to the Program Management Office—

(1) ensure that the core network and the radio access networks are deployed as networks are typically deployed by commercial mobile data service providers;

(2) promote competition in the public safety equipment market by requiring that equipment for use on the public safety broadband network be—

(A) built to open, non-proprietary, commercial standards;

(B) capable of being used by any public safety entity and accessed by devices manufactured by multiple vendors; and

(C) backward-compatible with prior generations of commercial mobile service and commercial mobile data service networks to the extent typically deployed by providers of commercial mobile service and commercial mobile data service; and

(3) ensure that the public safety broadband network is integrated with public safety answering points, or the equivalent of public safety answering points, and with networks for the provision of Next Generation 911 services (as defined in section 233).

(d) PROCUREMENTS.—All procurements for the public safety broadband network shall be made through an open, competitive bidding process, and may not include, except in the case of minor upgrades—

(1) sole-source contracts;

(2) the use of contract vehicles existing at the time of the procurement involved; or

(3) requirements for design proprietary to any individual vendor.

(e) NETWORK INFRASTRUCTURE AND DEVICE CRITERIA.—The Director of NIST, in consultation with the Corporation and the Commission, shall develop a list of certified devices and components meeting appropriate protocols and standards. A device or component may not be used on the public safety broadband network unless it appears on such list.

SEC. 203. PROGRAM MANAGEMENT OFFICE.

(a) ESTABLISHMENT.—The Corporation shall establish and staff a Program Management Office within the Corporation, or award a network management services contract to a private entity to establish and staff such an office. Any such contract shall be awarded through an open, competitive bidding process.

(b) ACCOUNTABILITY.—The actions of the Program Management Office shall be subject to review by the Corporation.

(c) INDEPENDENCE.—For the duration of any contract between the Program Management Office and the Corporation, the Program Management Office may not have a financial interest in the outcome of any request for proposals of the Corporation or a financial interest in any contract or agreement entered into by the Corporation.

(d) DUTIES.—The Program Management Office shall—

(1) be responsible for the day-to-day management of the public safety broadband network, including ensuring uniformity of deployments and upgrades to preserve nationwide interoperability and economies of scale in network equipment and device costs;

(2) create a template for use by a State Public Safety Broadband Office receiving a grant under section 212(a) in transmitting the plans developed under such section to the Program Management Office;

(3) create a standard format for requests for proposals with respect to the construction, management, maintenance, and operation of the core network and the radio access networks;

(4) in consultation with State Public Safety Broadband Offices, evaluate responses to the requests for proposals described in paragraph (3) and recommend to the Corporation which proposals the Corporation should accept;

(5) administer and oversee contracts entered into by the Corporation with entities the proposals of which the Corporation accepts as described in paragraph (4);

(6) develop templates for agreements that the Corporation may enter into with providers of commercial mobile service and commercial mobile data service for roaming and priority access services offered by such providers;

(7) develop templates for agreements for emergency access to the public safety broadband spectrum that the Corporation may enter into upon the request of a State Public Safety Broadband Office, as provided in section 104(a);

(8) in consultation with the Office of Emergency Communications in the Department of Homeland Security and with the Commission, implement an awareness campaign in order to stimulate nationwide adoption of the public safety broadband network by public safety entities;

(9) assess the progress of the construction and adoption of the public safety broadband network and report to the Corporation regarding such progress at such intervals as the Corporation requests, but no less frequently than biannually; and

(10) in consultation with State Public Safety Broadband Offices, advise the Corporation on the distribution of public funding provided under section 401(b)(5) for the construction, management, maintenance, and operation of the public safety broadband network.

(e) DEVELOPMENT AND EVALUATION OF REQUESTS FOR PROPOSALS.—

(1) PROCEDURAL REQUIREMENTS.—In all procurement related to the core network and the radio access networks, the Program Management Office shall use an open, competitive bidding process that—

(A) details the required framework and architecture of such networks, the general specifications of the work requested, and the service-delivery responsibilities of successful bidders;

(B) provides for the award of subcontracts; and

(C) prohibits, except in the case of minor upgrades—

(i) sole-source contracts;

(ii) the use of contract vehicles existing at the time of the procurement involved; and

(iii) requirements for design proprietary to any individual vendor.

(2) REQUIRED CRITERIA.—In developing requests for proposals with respect to the core network and the radio access networks, the Program Management Office shall, on a State-by-State or multi-State basis, seek proposals and recommend for acceptance by the Corporation proposals that—

(A) are based on commercial standards and are backward-compatible with existing commercial mobile service and commercial mobile data service networks;

(B) maximize use of existing infrastructure of commercial entities and of Federal, State, and tribal entities, including existing public safety infrastructure;

(C) incorporate deployable network assets, vehicular repeaters, and other equipment as a means to provide additional coverage and capacity as may be required;

(D) ensure a nationwide level of interoperability;

(E) provide economies of scale in equipment and device costs comparable to those in the commercial marketplace, including the costs of devices capable of operating in Band Class 14;

(F) promote competition in the network equipment and device markets;

(G) ensure coverage of rural and underserved areas;

(H) enable technology upgrades at a pace comparable to that occurring in the commercial mobile service and commercial mobile data service marketplaces;

(I) ensure the safety, security, and resiliency of the network, including requirements for protecting and monitoring the cybersecurity of the network; and

(J) incorporate results from the 700 MHz demonstration network managed by the Public Safety Communications Research Program.

(f) CONSULTATION WITH TECHNICAL AND OPERATIONS ADVISORY BODY.—In carrying out its responsibilities, the Program Management Office shall regularly meet and consult with the Technical and Operations Advisory Body established under section 201(h).

SEC. 204. ANALYSIS OF PUBLIC SAFETY NETWORK ATTRIBUTES.

(a) ESTABLISHMENT OF EVALUATION FRAMEWORK.—Not later than 180 days after the date of the enactment of this Act, the Director of NIST, in consultation with the Secretary of Homeland Security, the Commission, the Attorney General, and the Director of the Office of Management and Budget, shall develop and provide to the Corporation an evaluation framework for use by the Corporation in evaluating attributes for possible inclusion in the public safety broadband network.

(b) CONSIDERATIONS.—In developing the evaluation framework under subsection (a), the Director of NIST shall take into consideration the public safety network attributes identified in the report completed by the Visiting Committee on Advanced Technology of NIST.

(c) REQUIRED EVALUATIONS.—The evaluation framework developed under subsection (a) shall permit the Corporation to evaluate—

(1) the marginal cost of each public safety network attribute in developing, deploying, and operating the public safety broadband network;

(2) the benefit of each public safety network attribute to the public safety broadband network;

(3) the economic feasibility of requiring each public safety attribute to be included as part of the public safety broadband network;

(4) the resulting competitive vendor supply ecosystem that would be created by including each public safety attribute as part of the public safety broadband network; and

(5) the level of variability in regional requirements for each public safety attribute, if such attribute were to be included as part of the public safety broadband network.

(d) DEVELOPMENT OF COST-BENEFIT ANALYSIS.—The Corporation shall use the evaluation framework developed under subsection (a) to evaluate attributes for possible inclusion in the public safety broadband network and, based on such evaluation, shall develop a cost-benefit analysis to inform the construction, management, maintenance, and operation of the network.

SEC. 205. REPRESENTATION BEFORE STANDARDS SETTING ENTITIES.

The Director of NIST, in consultation with the Corporation, the Commission, and the Technical and Operations Advisory Body established under section 201(h), shall represent the interests of Federal departments and agencies and public safety entities using the public safety broadband network before any appropriate standards development organizations that address issues that in the judgment of the Director are relevant and important to the public safety broadband network.

SEC. 206. GAO REPORT ON SATELLITE BROADBAND.

Not later than 2 years after the date of the enactment of this Act, the Comptroller General of the United States shall conduct a study and submit to the appropriate committees of Congress a report on the current and future capabilities of fixed and mobile satellite broadband for use by public safety entities.

SEC. 207. ACCESS TO FEDERAL SUPPLY SCHEDULES.

Section 502 of title 40, United States Code, is amended—

(1) by redesignating subsection (f) as subsection (g); and

(2) by inserting after subsection (e) the following new subsection:

"(f) USE OF SUPPLY SCHEDULES BY PUBLIC SAFETY BROADBAND NETWORK CORPORATION FOR CERTAIN GOODS AND SERVICES.—

"(1) IN GENERAL.—The Administrator may provide, to the extent practicable, for the use by the Public Safety Broadband Network Corporation of Federal supply schedules for the following:

"(A) Roaming and priority access services offered by providers of commercial mobile service and commercial mobile data service.

"(B) Broadband network equipment, devices, and applications that are suitable for use on the public safety broadband network.

"(2) DEFINITIONS.—In this subsection—

"(A) the terms 'commercial mobile data service' and 'public safety broadband network' have the meanings given such terms in section 2 of the Public Safety Broadband and Wireless Innovation Act of 2011;

"(B) the term 'commercial mobile service' has the meaning given such term in section 332(d)(1) of the Communications Act of 1934 (47 U.S.C. 332(d)(1)); and

"(C) the term 'Public Safety Broadband Network Corporation' means the corporation established under section 201(a)(1) of the Public Safety Broadband and Wireless Innovation Act of 2011.''.

SEC. 208. FEDERAL INFRASTRUCTURE SHARING.

The Administrator of General Services shall establish rules to allow the Corporation, on behalf of public safety entities, to have access to such components of Federal infrastructure as are appropriate for the construction and maintenance of the public safety broadband network.

SEC. 209. INITIAL FUNDING FOR THE CORPORATION.

(a) NTIA LOANS TO THE CORPORATION.—

(1) IN GENERAL.—Prior to the commencement of incentive auctions to be carried out under subparagraph (G) of section 309(j)(8) of the Communications Act of 1934, as added by section 302(a), or the auction of spectrum pursuant to subsection (a)(2) or (b) of section 301, the Assistant Secretary is authorized to make loans to the Corporation.

(2) CONDITION.—At the time of application for, and as a condition to, any such loan, the Corporation shall file with the Assistant Secretary—

(A) an estimated budget for the period between such application and the beginning of the1st fiscal year for which the Corporation projects that the fees collected under section

210 will be sufficient to cover the total expenses of the Corporation for such fiscal year; and

(B) a statement with respect to the anticipated use of the proceeds of the loan.

(3) NTIA APPROVAL.—If the Assistant Secretary determines that such loan is necessary for the Corporation to carry out its duties and responsibilities under this title and title I and that the Corporation has submitted a plan which provides as reasonable an assurance of prompt repayment as may be feasible under the circumstances, then the Assistant Secretary shall so certify to the Secretary of the Treasury, and issue notes or other obligations to the Secretary of the Treasury pursuant to subsection (b).

(b) NTIA NOTES ISSUED TO TREASURY.—

(1) IN GENERAL.—To enable the Assistant Secretary to make loans under subsection (a), the Assistant Secretary is authorized to issue to the Secretary of the Treasury notes or other obligations, in such forms and denominations, bearing such maturities, and subject to such terms and conditions, as may be prescribed by the Secretary of the Treasury.

(2) INTEREST ON NOTES.—

(A) ESTABLISHMENT.—Any notes or other obligations issued pursuant to paragraph (1) shall bear interest at a rate determined by the Secretary of the Treasury, taking into consideration the current average market yield on outstanding marketable obligations of the United States of comparable maturities during the month preceding the issuance of the notes or other obligations.

(B) REDUCTION.—The Secretary of the Treasury may reduce the interest rate set forth under subparagraph (A) if the Secretary of the Treasury determines the reduction to be in the national interest.

(3) AUTHORITY OF TREASURY TO SELL NOTES.—The Secretary of the Treasury may at any time sell any of the notes or other obligations acquired by the Secretary of the Treasury under this subsection. All redemptions, purchases, and sales by the Secretary of the Treasury of such notes or other obligations shall be treated as public debt transactions of the United States.

SEC. 210. PERMANENT SELF-FUNDING OF CORPORATION AND DUTY TO COLLECT CERTAIN FEES.

(a) IN GENERAL.—The Corporation is authorized to assess and collect the following fees:

(1) NETWORK USER FEES.—A user or subscription fee from each public safety entity that seeks access to or use of the public safety broadband network.

(2) SHARING ARRANGEMENT FEES.—A fee from each entity with which the Corporation enters into a sharing arrangement under section 104.

(b) ESTABLISHMENT OF FEE AMOUNTS.—The total amount of the fees assessed for each fiscal year pursuant to this section shall be sufficient, and to the extent practicable shall not exceed the amount necessary, to cover the total expenses of the Corporation in carrying out its duties and responsibilities under this title and title I for such fiscal year.

(c) REQUIRED REINVESTMENT OF EXCESS FUNDS.—If the Corporation receives fees assessed for a fiscal year pursuant to this section in excess of the total expenses of the Corporation in carrying out its duties and responsibilities under this title and title I for such fiscal year, the Corporation shall use the excess only to ensure the construction, management, maintenance, and operation of the public safety broadband network.

Subtitle B—State, Local, and Tribal Planning and Implementation

SEC. 211. STATE, LOCAL, AND TRIBAL PLANNING AND IMPLEMENTATION FUND.

(a) ESTABLISHMENT.—There is established in the Treasury of the United States a fund to be known as the State, Local, and Tribal Planning and Implementation Fund.

(b) PURPOSE.—The Assistant Secretary shall establish and administer the grant program under section 212 using the funds deposited in the State, Local, and Tribal Planning and Implementation Fund.

(c) CREDITING OF RECEIPTS.—There shall be deposited into or credited to the State, Local, and Tribal Planning and Implementation Fund—

(1) any amounts specified in section 401; and

(2) any amounts borrowed by the Assistant Secretary under subsection (d).

(d) BORROWING AUTHORITY.—

(1) IN GENERAL.—The Assistant Secretary may borrow from the general fund of the Treasury beginning on October 1, 2011, such sums as may be necessary, but not to exceed $250,000,000, to implement section 212.

(2) REIMBURSEMENT.—The Assistant Secretary shall reimburse the general fund of the Treasury, without interest, for any amounts borrowed under paragraph (1) as funds are deposited into the State, Local, and Tribal Planning and Implementation Fund.

SEC. 212. STATE, LOCAL, AND TRIBAL PLANNING AND IMPLEMENTATION GRANT PROGRAM.

(a) ESTABLISHMENT OF GRANT PROGRAM.—The Assistant Secretary, in consultation with the Corporation, shall take such action as is necessary to establish a grant program to make grants to each State Public Safety Broadband Office established under subsection (d) to assist State, local, and tribal public safety entities within such State in carrying out the following activities:

(1) Identifying and planning the most efficient and effective way for such entities to utilize and integrate the infrastructure, equipment, and other architecture associated with the public safety broadband network to satisfy the wireless communications and data services needs of such entities.

(2) Identifying opportunities for creating a consortium with one or more other States to assist the Program Management Office in developing a single

request for proposals to serve the common network requirements of the States in the consortium.

(3) Identifying the particular assets and specialized needs of the public safety entities located within such State for inclusion in requests for proposals with respect to the radio access networks. Such assets and needs may include the projected number of users, preferred buildout timeframes, special coverage needs, special hardening, security, reliability, and resiliency needs, local user priority assignments, integration needs of public safety answering points and emergency operations centers, and available towers and other infrastructure.

(4) Transmitting the plans developed under this subsection to the Program Management Office using the template developed under section 203(d)(2).

(b) MATCHING REQUIREMENTS; FEDERAL SHARE.—

(1) IN GENERAL.—The Federal share of the cost of any activity carried out using a grant under this section may not exceed 80 percent of the eligible costs of carrying out that activity, as determined by the Assistant Secretary, in consultation with the Corporation.

(2) WAIVER.—The Assistant Secretary may waive, in whole or in part, the requirements of para-

graph (1) for good cause shown if the Assistant Secretary determines that such a waiver is in the public interest.

(c) PROGRAMMATIC REQUIREMENTS.—Not later than 6 months after the date of the incorporation of the Corporation under section 201(a), the Assistant Secretary, in consultation with the Corporation, shall establish requirements relating to the grant program to be carried out under this section, including the following:

(1) Defining eligible costs for purposes of subsection (b)(1).

(2) Determining the scope of eligible activities for grant funding under this section.

(3) Prioritizing grants for activities that ensure coverage in rural as well as urban areas.

(d) STATE PUBLIC SAFETY BROADBAND OFFICES.—A State wishing to receive a grant under this section shall establish a State Public Safety Broadband Office to carry out the activities described in subsection (a). The Assistant Secretary may not accept a grant application unless such application certifies that the State has established such an office.

SEC. 213. PUBLIC SAFETY WIRELESS FACILITIES DEPLOYMENT.

(a) IN GENERAL.—Notwithstanding section 704 of the Telecommunications Act of 1996 (Public Law 104–104) or any other provision of law, a State or local government may not deny, and shall approve, any eligible facilities request for a modification of an existing wireless tower that does not substantially change the physical dimensions of such tower.

(b) ELIGIBLE FACILITIES REQUEST.—In this section, the term ''eligible facilities request'' means a request that—

(1) is for a modification of an existing wireless tower that involves—

(A) collocation of new transmission equipment;

(B) removal of transmission equipment; or

(C) replacement of transmission equipment; and

(2) is made by an entity that enters into a contract with the Corporation to construct, manage, maintain, or operate the public safety broadband network for purposes of performing work under such contract.

Subtitle C—Public Safety Communications Research and Development

SEC. 221. NIST-DIRECTED PUBLIC SAFETY WIRELESS COMMUNICATIONS RESEARCH AND DEVELOPMENT.

(a) IN GENERAL.—From amounts made available from the Public Safety Trust Fund established under section 401, the Director of NIST, in consultation with the Commission, the Secretary of Homeland Security, and the National Institute of Justice of the Department of Justice, as appropriate, shall conduct research and assist with the development of standards, technologies, and applications to advance wireless public safety communications.

(b) REQUIRED ACTIVITIES.—In carrying out subsection (a), the Director of NIST, in consultation with the Corporation and the Technical and Operational Advisory Body established under section 201(h) shall—

(1) document public safety wireless communications requirements;

(2) accelerate the development of the capability for communications between currently deployed public safety narrowband systems and the public safety broadband network;

(3) establish a research plan, and direct research, that addresses the wireless communications needs of public safety entities beyond what can be provided by the current generation of broadband technology;

(4) accelerate the development of mission critical voice communications, including device-to-device talkaround capability over broadband networks, public safety prioritization, authentication capabilities, and standard application programming interfaces, if necessary and practical;

(5) accelerate the development of communications technology and equipment that can facilitate the eventual migration of public safety narrowband communications to the public safety broadband network;

(6) ensure the development and testing of new, interoperable, nonproprietary broadband technologies (including applications, devices, and device components) that are designed to open standards to meet the needs of public safety entities; and

(7) convene working groups of relevant government and commercial parties in carrying out paragraphs (1) through (6).

Subtitle D—Next Generation 911 Services

SEC. 231. NHTSA REPORT ON COSTS FOR REQUIREMENTS AND SPECIFICATIONS OF NEXT GENERATION 911 SERVICES.

(a) IN GENERAL.—Using amounts made available from the Public Safety Trust Fund under section 401, not later than 1 year after the date of enactment of this Act, the Administrator of the National Highway Traffic Safety Administration, in consultation with the Commission, the Secretary of Homeland Security, and the Office, shall prepare and submit to Congress a report that analyzes and determines detailed costs for specific Next Generation 911 service requirements and specifications.

(b) CONTENTS.—The report required under subsection (a) shall include the following:

(1) How costs would be allocated geographically or among public safety answering points, broadband service providers, and third-party providers of Next Generation 911 services.

(2) An assessment of the current state of Next Generation 911 service readiness among public safety answering points.

(3) How differences in public safety answering points' access to broadband across the United States may affect costs.

(4) A technical analysis and cost study of different delivery platforms, such as wireline, wireless, and satellite.

(5) An assessment of the architectural characteristics, feasibility, and limitations of Next Generation 911 service delivery.

(6) An analysis of the needs for Next Generation 911 service of persons with disabilities.

(7) Standards and protocols for Next Generation 911 service and for incorporating Voice over Internet Protocol and real time text standards.

SEC. 232. FCC RECOMMENDATIONS FOR LEGAL AND STATUTORY FRAMEWORK FOR NEXT GENERATION 911 SERVICES.

Not later than 1 year after the date of enactment of this Act, the Commission, in coordination with the Secretary of Homeland Security, the Administrator of the National Highway Traffic Safety Administration, and the Office, shall prepare and submit a report to Congress that contains recommendations for the legal and statutory framework for Next Generation 911 services, consistent with recommendations in the National Broadband Plan developed by the Commission pursuant to the American Recovery and Reinvestment Act of 2009, including the following:

(1) A legal and regulatory framework for the development of Next Generation 911 services and the transition from legacy 9–1–1 to Next Generation 911 services.

(2) Legal mechanisms to ensure efficient and accurate transmission of 9–1–1 caller information to emergency management or response agencies.

(3) Recommendations for removing jurisdictional barriers and inconsistent legacy regulations, including—

(A) proposals that would require States to remove regulatory impediments to Next Generation 911 services development, while recognizing the appropriate role of the States;

(B) eliminating outdated 9–1–1 regulations at the Federal level; and

(C) preempting inconsistent State regulations.

SEC. 233. DEFINITIONS.

In this subtitle:

(1) EMERGENCY CALL.—The term ''emergency call'' means any real-time communication with a

public safety answering point or other emergency management or response agency, including—

(A) through voice, text, or video and related data; and

(B) nonhuman-initiated automatic event alerts, such as alarms, telematics, or sensor data, which may also include real-time voice, text, or video communications.

(2) NEXT GENERATION 911 SERVICES.—The term "Next Generation 911 services" means an Internet Protocol-based system comprised of hardware, software, data, and operational policies and procedures that—

(A) provides standardized interfaces from emergency call and message services to support emergency communications;

(B) processes all types of emergency calls, including voice, data, and multimedia information;

(C) acquires and integrates additional emergency call data useful to call routing and handling;

(D) delivers the emergency calls, messages, and data to the appropriate public safety answering point and other appropriate emergency entities;

(E) supports data or video communications needs for coordinated incident response and management; and

(F) provides broadband service to public safety answering points or other first responder entities.

(3) OFFICE.—The term "Office" has the meaning given such term in section 158 of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 942).

TITLE III—SPECTRUM AUCTION AUTHORITY

SEC. 301. DEADLINES FOR REALLOCATION AND AUCTION OF CERTAIN SPECTRUM.

(a) IN GENERAL.—

(1) IDENTIFICATION OF SPECTRUM.—Not later than 1 year after the date of the enactment of this Act—

(A) the Assistant Secretary shall identify for immediate reallocation, at a minimum—

(i) 15 megahertz of contiguous spectrum at frequencies located from 1675 megahertz to 1710 megahertz, except for the geographic exclusion zones (as such zones may be amended) identified in the report of the NTIA published in October 2010 and entitled "An Assessment of Near-Term Viability of Accommodating Wireless Broadband Systems in 1675–1710 MHz, 1755–1780 MHz, 3500–3650 MHz, and 4200–4220 MHz, 4380–4400 MHz Bands"; and

(ii) 25 megahertz of contiguous spectrum at frequencies located from 1755 megahertz to 1850 megahertz, unless—

(I) the President determines that such spectrum cannot be reallocated due to the need to protect incumbent Federal operations from interference or that reallocation must be delayed or undertaken in phases to ensure protection or continuity of Federal operations; and

(II) the President identifies other spectrum for reallocation that can reasonably be expected to produce comparable auction receipts; and

(B) the Commission shall identify for immediate reallocation, at a minimum, 15 megahertz of contiguous spectrum to pair with spectrum identified under subparagraph (A)(i).

(2) AUCTION OF IDENTIFIED SPECTRUM AND CERTAIN OTHER SPECTRUM.—

(A) IN GENERAL.—The Commission shall assign licenses for the use of the spectrum identified under paragraph (1) and the spectrum between the frequencies from 2155 megahertz to 2180 megahertz through competitive bidding under section 309(j) of the Communications Act of 1934 (47 U.S.C. 309(j)) in accordance with the timetable set forth in subparagraph (B).

(B) TIMETABLE.—Notwithstanding paragraph (15)(A) of such section, the Commission shall complete all actions necessary in order to—

(i) in the case of licenses for the use of the spectrum between the frequencies from 2155 megahertz to 2180 megahertz and the spectrum identified under subparagraphs (A)(i) and (B) of paragraph (1)—

(I) commence the bidding process not later than January 31, 2014; and

(II) deposit the available proceeds in accordance with paragraph (8) of such section not later than June 30, 2014; and

(ii) in the case of licenses for the use of the spectrum identified under subparagraph (A)(ii) of paragraph (1)—

(I) commence the bidding process not later than January 31, 2018; and

(II) deposit the available proceeds in accordance with paragraph (8) of such section not later than June 30, 2018.

(b) REALLOCATION AND AUCTION OF CERTAIN OTHER SPECTRUM.—

(1) IN GENERAL.—In accordance with the timetable set forth in paragraph (2), the Commission shall reallocate and assign through a system of competitive bidding under section 309(j) of the Communications Act of 1934 (47 U.S.C. 309(j)), or reallocate for unlicensed use, the portion of the electromagnetic spectrum between the frequencies from 3550 megahertz to 3650 megahertz, except for the

geographic exclusion zones (as such zones may be amended) identified in the report of the NTIA published in October 2010 and entitled ''An Assessment of Near-Term Viability of Accommodating Wireless Broadband Systems in 1675–1710 MHz, 1755–1780 MHz, 3500–3650 MHz, and 4200–4220 MHz, 4380–4400 MHz Bands''.

(2) TIMETABLE.—Notwithstanding paragraph (15)(A) of such section, the Commission shall complete all actions necessary in order to—

(A) commence the bidding process not later than 3 years after the date of the enactment of this Act; and

(B) deposit the available proceeds in accordance with paragraph (8) of such section not later than 6 months thereafter.

(c) AUCTION PROCEEDS.—Section 309(j)(8) of the Communications Act of 1934 (47 U.S.C. 309(j)(8)) is amended—

(1) in subparagraph (A), by striking ''(B), (D), and (E),'' and inserting ''(B), (D), (E), (F), and (G),'';

(2) in subparagraph (C)(i), by striking ''subparagraph (E)(ii)'' and inserting ''subparagraphs (D)(ii), (E)(ii), (F), and (G)(iv)'';

(3) in subparagraph (D)—

(A) by striking the heading and inserting "PROCEEDS FROM REALLOCATED FEDERAL SPECTRUM";

(B) by striking "Cash" and inserting the following:

"(i) IN GENERAL.—Except as provided in clause (ii), cash";

(C) by adding at the end the following:

"(ii) CERTAIN OTHER PROCEEDS.—Except as provided in subparagraph (B), in the case of proceeds (including deposits and upfront payment from successful bidders) attributable to the auction of eligible frequencies described in paragraph (2) of section 113(g) of the National Telecommunications and Information Administration Organization Act that are required to be auctioned by subsection (a)(2) or (b) of section 301 of the Public Safety Broadband and Wireless Innovation Act of 2011, such portion of such proceeds as is necessary to cover the relocation costs and sharing costs (as defined in paragraph (3) of such section 113(g)) of Federal entities relocated from or sharing such eligible frequencies shall be deposited in the Spectrum Relocation Fund. The remainder of such proceeds shall be deposited in the Public Safety Trust Fund established by section 401(a)(1) of such Act.''; and

(4) by adding at the end the following new subparagraph:

''(F) CERTAIN PROCEEDS DESIGNATED FOR PUBLIC SAFETY TRUST FUND.—Except as provided in subparagraphs (B) and (D), the proceeds (including deposits and upfront payments from successful bidders) from the use of a system of competitive bidding under this subsection pursuant to subsections (a)(2) and (b) of section 301 of the Public Safety Broadband and Wireless Innovation Act of 2011 shall be deposited in the Public Safety Trust Fund established by section 401(a)(1) of such Act.''.

(d) EXTENSION OF AUCTION AUTHORITY.—Section 309(j)(11) of the Communications Act of 1934 (47 U.S.C. 309(j)(11)) is amended by striking ''2012'' and inserting ''2021''.

SEC. 302. INCENTIVE AUCTION AUTHORITY.

(a) IN GENERAL.—Section 309(j)(8) of the Communications Act of 1934, as amended by section 301(c), is further amended by adding at the end the following new subparagraph:

"(G) INCENTIVE AUCTION AUTHORITY.—

"(i) IN GENERAL.—If the Commission determines that it is consistent with the public interest in utilization of the spectrum for a licensee to voluntarily relinquish some or all of its licensed rights for the use of spectrum in order to permit—

"(I) through competitive bidding under this subsection, the assignment of new initial licenses subject to new service rules, on a flexible-use basis to the extent technologically feasible; or

"(II) the allocation of spectrum for unlicensed use;

the Commission may disburse to such licensee, from the proceeds from competitive bidding for any spectrum usage rights made available by reason of relinquishments under this subparagraph, an amount that the Commission considers appropriate, based on the value of the rights relinquished by such licensee.

"(ii) FACTORS FOR CONSIDERATION.—In considering whether to accept the voluntary relinquishment of licensed spectrum usage rights of a licensee and share proceeds with such licensee under clause (i), the Commission shall consider the following factors:

"(I) The conditions under which such licensee could maintain the license and whether such licensee is in compliance with the license terms.

"(II) The extent to which such relinquishment would serve the public interest, convenience, and necessity.

"(iii) COVERAGE AREA REQUIREMENTS.—In assigning licenses under this subparagraph, the Commission shall make all reasonable efforts to ensure that there is an adequate opportunity for applicants to submit bids for licenses covering both large and small geographic areas, as such areas are determined by the Commission.

"(iv) TREATMENT OF REVENUES.—Except as provided in subparagraph (B), all proceeds (including deposits and upfront payments from successful bidders) from the auction of spectrum usage rights made available by relinquishments under this subparagraph shall be deposited in the Public Safety Trust Fund established by section 401(a)(1) of the Public Safety Broadband and Wireless Innovation Act of 2011.".

(b) SPECIAL RULES FOR TELEVISION BROADCAST SPECTRUM.—

(1) GENERAL AUTHORITY TO REORGANIZE.—In order to create a geographically contiguous band of spectrum across the United States, the Commission may—

(A) create a framework to make available such portions of the television broadcast spectrum as the Commission considers appropriate; and

(B) require full-power television broadcast station licensees and other licensees, as the Commission considers appropriate, to relocate to the portion of the television broadcast spectrum located between the frequencies from 54 megahertz to 608 megahertz.

(2) VOLUNTARY NATURE OF INCENTIVE AUCTIONS.—Except as provided in paragraphs (3) and (4), reclamation of spectrum usage rights from a television broadcast station licensee for the purpose of providing spectrum usage rights to carry out an incentive auction under subparagraph (G) of section 309(j)(8) of the Communications Act of 1934, as added by subsection (a), shall be on a voluntary basis.

(3) RECLAMATION IN EXCHANGE FOR RIGHTS TO SUBSTANTIALLY EQUIVALENT SPECTRUM.—

(A) IN GENERAL.—The Commission may reclaim the spectrum usage rights of a television broadcast station licensee for the purpose of providing spectrum usage rights to carry out an incentive auction under section 309(j)(8)(G) of the Communications Act of 1934 if the Commission assigns to such licensee the rights to use an identical amount of contiguous spectrum, in the same geographic market, that is located in the range of frequencies—

(i) from 54 megahertz to 608 megahertz, if the rights reclaimed were for the use of spectrum located in the range from 54 megahertz to 88 megahertz;

(ii) from 174 megahertz to 608 megahertz, if the rights reclaimed were for the use of spectrum located in the range from 174 megahertz to 216 megahertz; and

(iii) from 470 megahertz to 608 megahertz, if the rights reclaimed were for the use of spectrum located in the range from 470 megahertz to 698 megahertz.

(B) SUBSTANTIAL EQUIVALENCE.—The Commission shall make reasonable efforts to ensure, to the extent technically feasible and in the public interest, that spectrum usage rights assigned under subparagraph (A) enable a licensee to offer service that is substantially similar in service contour and amount of harmful interference to the service offered by such licensee on the spectrum the rights to which are reclaimed by the Commission under such subparagraph.

(C) RELOCATION COSTS.—The costs incurred by a licensee in relocating to an identical amount of spectrum under subparagraph (A), without any modification of usage rights as described in paragraph (4), shall be paid from the Incentive Auction Relocation Fund established by paragraph (5), but the proceeds from an incentive auction under section 309(j)(8)(G) of the Communications Act of 1934 shall not otherwise be disbursed to such licensee by reason of the relocation.

(D) RELOCATION FROM VHF TO UHF.—In conducting the reclamation and reassignments under subparagraph (A), the Commission shall, to the extent technically feasible and in the public interest, allow each television broadcast station licensee holding a license to use a portion of the broadcast television spectrum located in the range of frequencies from 54 megahertz to 216 megahertz to relocate to a portion in the range from 470 megahertz to 608 megahertz.

(4) MODIFICATION OF RIGHTS AND COMPENSATION.—

(A) MODIFICATION.—If the Commission determines that it is in the public interest to modify the spectrum usage rights of a television broadcast station licensee for the purpose of providing spectrum usage rights to carry out an incentive auction under section 309(j)(8)(G) of the Communications Act of 1934, the Commission may make the modification and disburse to such licensee a portion of the auction proceeds that compensates such licensee for the reduction in spectrum usage rights.

(B) LEAST MODIFICATION TECHNICALLY FEASIBLE.—To the extent technically feasible and in the public interest, in making a modification of the spectrum usage rights of a television broadcast station licensee under subparagraph (A), the Commission shall make reasonable efforts to—

(i) preserve the amount of population covered by the signal of such licensee within the service area of such licensee; and

(ii) avoid any substantial increase in harmful interference to the signal of such licensee as a result of the modification.

(C) ADDITIONAL LIMITATIONS.—With respect to any modification under subparagraph (A)—

(i) the Commission may not involuntarily co-locate multiple television broadcast station licensees on the same channel; and

(ii) television broadcast station licensees voluntarily electing to be co-located on the same channel shall—

(I) retain the same carriage rights under sections 338, 614, and 615 of the Communications Act of 1934 (47 U.S.C. 338; 534; 535) as before the co-location; and

(II) receive payment from the Incentive Auction Relocation Fund established by paragraph (5) for any costs of relocation to another channel incurred in connection with the co-location arrangement, in addition to disbursements as compensation for the modification of spectrum usage rights under subparagraph (A).

(5) ESTABLISHMENT OF INCENTIVE AUCTION RELOCATION FUND.—

(A) IN GENERAL.—There is established in the Treasury of the United States a fund to be known as the Incentive Auction Relocation Fund.

(B) DEPOSITS.—There shall be deposited in the Incentive Auction Relocation Fund the amounts specified in section 401(b)(2).

(C) AVAILABILITY.—Amounts in the Incentive Auction Relocation Fund shall be available to the Assistant Secretary for use—

(i) without fiscal year limitation;

(ii) for a period not to exceed 18 months following the later of—

(I) completion of the incentive auction under section 309(j)(8)(G) of the Communications Act of 1934 from which such amounts were derived; or

(II) with respect to availability for payment of the relocation costs of a particular relocating licensee, notification by the Commission to the Assistant Secretary of such costs; and

(iii) without further appropriation.

(D) USE OF FUNDS.—

(i) IN GENERAL.—Amounts in the Incentive Auction Relocation Fund may only be used by the Assistant Secretary, in consultation with the Commission, to cover—

(I) the relocation costs of television broadcast station licensees that are relocated to different channels or geographic locations in the reorganization of television broadcast spectrum under this subsection, including the costs of new equipment, installation, and construction (including the costs of tower, antenna, transmitter, and transmission line upgrades) incurred as a result of the relocation;

(II) the costs incurred by multichannel video programming distributors (as defined in section 602(13) of the Communications Act of 1934 (47 U.S.C. 522(13))) in order to comply with the carriage obligations under sections 338, 614, and 615 of such Act (47 U.S.C. 338; 534; 535) with respect to television broadcast station licensees voluntarily electing to be co-located on the same channel as described in paragraph (4)(C); and

(III) the expenses incurred by the Assistant Secretary in administering the Fund.

(ii) PROHIBITION.—Amounts in the Incentive Auction Relocation Fund may not be used to cover lost revenues attributable to relocation or costs associated with a voluntary relinquishment of rights.

(iii) REASONABLENESS.—The Assistant Secretary may only make payments under clause (i) to cover costs that were reasonably incurred, as determined by the Assistant Secretary, in consultation with the Commission.

(6) CONFIDENTIALITY.—The Commission shall protect the confidentiality of the identity of a television broadcast station licensee offering to relinquish spectrum usage rights under section 309(j)(8)(G) of the Communications Act of 1934 until the relinquishment becomes effective.

(7) UNLICENSED USE.—After assigning, through competitive bidding under section 309(j)(8)(G) of the Communications Act of 1934, licenses for the use of 84 megahertz of the television broadcast spectrum made available through the reor-

ganization under this subsection, the Commission may, if consistent with the public interest, disburse a portion of the proceeds of such bidding to other licensees for the purpose of ensuring that portions of the television broadcast spectrum remain available for unlicensed use on a nationwide basis and in each local market.

(8) DEADLINE FOR AUCTION OF CLEARED TELEVISION BROADCAST SPECTRUM.—The Commission shall take all actions necessary in order to, with respect to the portions of the television broadcast spectrum made available through the reorganization under this subsection—

(A) not later than January 31, 2016—

(i) commence the bidding process under section 309(j)(8)(G) of the Communications Act of 1934 to assign new initial licenses subject to new service rules, on a flexible-use basis to the extent technologically feasible; or

(ii) allocate such spectrum for unlicensed use; and

(B) not later than June 30, 2016, deposit the available proceeds in accordance with such section.

(9) LIMITATION.—During the period beginning on the date of the enactment of this Act and ending on June 30, 2016, the Commission may conduct only 1 process involving reorganization of the television broadcast spectrum under this subsection and the auction of such spectrum under section 309(j)(8)(G) of the Communications Act of 1934.

(10) CERTAIN PROVISIONS INAPPLICABLE.—The following provisions of the Communications Act of 1934 shall not apply in the case of the reorganization of television broadcast spectrum under this subsection or the auction under section 309(j)(8)(G) of such Act of the spectrum made available through such reorganization: section 307(b), the 2nd and 3rd sentences and subparagraphs (A) and (F) of section 309(j)(3), subparagraphs (A), (C), and (D) of section 309(j)(4), section 309(j)(15)(A), section 316, and section 331.

(11) TELEVISION BROADCAST SPECTRUM DEFINED.—In this subsection, the term "television broadcast spectrum" means the portions of the electromagnetic spectrum between the frequencies from 54 megahertz to 72 megahertz, from 76 megahertz to 88 megahertz, from 174 megahertz to 216 mega-

hertz, from 470 megahertz to 608 megahertz, and from 614 megahertz to 698 megahertz.

(12) EXPIRATION.—The preceding paragraphs of this subsection, except paragraphs (5) and (11), shall not apply after June 30, 2016.

(c) INCENTIVE AUCTIONS TO REPURPOSE CERTAIN MOBILE SATELLITE SERVICE SPECTRUM FOR TERRESTRIAL BROADBAND USE.—To the extent that the Commission makes available spectrum licenses for the use of some or all of the spectrum between the frequencies from 2000 megahertz to 2020 megahertz and from 2180 megahertz to 2200 megahertz for terrestrial broadband use, such licenses shall be assigned using a system of competitive bidding under section 309(j) of the Communications Act of 1934 (47 U.S.C. 309(j)), including, as appropriate, paragraph (8)(G) of such section.

TITLE IV—PUBLIC SAFETY TRUST FUND

SEC. 401. PUBLIC SAFETY TRUST FUND.

(a) ESTABLISHMENT OF PUBLIC SAFETY TRUST FUND.—

(1) IN GENERAL.—There is established in the Treasury of the United States a trust fund to be known as the Public Safety Trust Fund.

(2) DEPOSIT OF RECEIPTS.—

(A) IN GENERAL.—There shall be deposited in the Public Safety Trust Fund the proceeds from the auction of spectrum required to be deposited in the Fund by subparagraphs (D)(ii), (F), and (G) of section 309(j)(8) of the Communications Act of 1934, as added by sections 301(c)(3)(C), 301(c)(4), and 302(a), respectively.

(B) AVAILABILITY.—Amounts deposited in the Public Safety Trust Fund in accordance with subparagraph (A) shall remain available through fiscal year 2021. After the end of such fiscal year, such amounts shall be deposited in the general fund of the Treasury, where such amounts shall be dedicated for the sole purpose of deficit reduction.

(b) USE OF FUND.—Amounts deposited in the Public Safety Trust Fund shall be used in the following manner:

(1) PAYMENT OF INCENTIVE AMOUNTS.—

(A) DISBURSALS.—Amounts in the Public Safety Trust Fund shall be used to make the following disbursals:

(i) Disbursals permitted by section 309(j)(8)(G)(i) of the Communications Act of 1934 to licensees who voluntarily relinquished licensed spectrum usage rights under such section.

(ii) Disbursals required by section 302(b)(4)(A) to television broadcast station licensees whose spectrum usage rights have been modified under such section for the purpose of providing spectrum usage rights to carry out an incentive auction under section 309(j)(8)(G) of the Communications Act of 1934.

(B) NOTIFICATION TO CONGRESS.—

(i) IN GENERAL.—At least 3 months before any incentive auction conducted under section 309(j)(8)(G) of the Communications Act of 1934, the Chairman of the Commission, in consultation with the Director of the Office of Management and Budget, shall notify the appropriate committees of Congress—

(I) of the methodology for calculating any disbursals described in clause (i) or (ii) of subparagraph (A) that will be made from the proceeds of such auction; and

(II) that such methodology considers the value of the spectrum voluntarily relinquished in its current use and the timeliness with which the licensee cleared its use of such spectrum.

(ii) DEFINITION.—In this subparagraph, the term "appropriate committees of Congress" means—

(I) the Committee on Commerce, Science, and Transportation of the Senate;

(II) the Committee on Appropriations of the Senate;

(III) the Committee on Energy and Commerce of the House of Representatives; and

(IV) the Committee on Appropriations of the House of Representatives.

(2) INCENTIVE AUCTION RELOCATION FUND.—Not less than 5 percent but not more than $2,000,000,000 of the amounts in the Public Safety Trust Fund shall be deposited in the Incentive Auc-

tion Relocation Fund established by section 302(b)(5)(A).

(3) DISBURSALS TO ENSURE AVAILABILITY FOR UNLICENSED USE.—Amounts in the Public Safety Trust Fund shall be used to make the disbursals permitted by section 302(b)(7) for the purpose of ensuring that certain portions of the electromagnetic spectrum remain available for unlicensed use.

(4) STATE, LOCAL, AND TRIBAL PLANNING AND IMPLEMENTATION FUND.—$250,000,000 shall be deposited in the State, Local, and Tribal Planning and Implementation Fund established by section 211(a).

(5) PUBLIC SAFETY BROADBAND CORPORATION.—$11,000,000,000 shall deposited with the Public Safety Broadband Corporation established under section 201(a) for ensuring the construction, management, maintenance, and operation of the public safety broadband network.

(6) PUBLIC SAFETY RESEARCH AND DEVELOPMENT.—$100,000,000 per year for each of the fiscal years 2012 through 2016 shall be made available for use by the Director of NIST to carry out the research program established under section 221.

(7) NHTSA REPORT ON NEXT GENERATION 911 SERVICES.—$2,000,000 shall be made available for fiscal years 2012 and 2013 for use by the Administrator of the National Highway Traffic Safety Administration to prepare the report on Next Generation 911 services required by section 231.

(8) DEFICIT REDUCTION.—Any amounts remaining in the Public Safety Trust Fund after the deduction of the amounts required by paragraphs (1) through (7) shall be deposited in the general fund of the Treasury, where such amounts shall be dedicated for the sole purpose of deficit reduction.

(c) INVESTMENT.—Amounts in the Public Safety Trust Fund shall be invested in accordance with section 9702 of title 31, United States Code, and any interest on, and proceeds from, any such investment shall be credited to, and become a part of, the Fund.

TITLE V—SPECTRUM POLICY

SEC. 501. SPECTRUM INVENTORY.

Part B of title I of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 921 et seq.) is amended by adding at the end the following:

"SEC. 119. SPECTRUM INVENTORY.

"(a) RADIO SPECTRUM INVENTORY.—In order to promote the efficient use of the electromagnetic spectrum, the Assistant Secretary and the Commission shall coordinate and carry out each of the following activities not later than 1 year after the date of enactment of this section:

"(1) Except as provided in subsection (e), create an inventory of each radio spectrum band of frequencies listed in the United States Table of Frequency Allocations, from 225 megahertz to, at a minimum, 3.7 gigahertz, and to 10 gigahertz unless the Assistant Secretary and the Commission determine that the burden of expanding the inventory outweighs the benefit, that includes—

"(A) the radio services authorized to operate in each band of frequencies;

"(B) the identity of each Federal or non-Federal user within each such radio service authorized to operate in each band of frequencies;

"(C) the activities, capabilities, functions, or missions (including whether such activities, capabilities, functions, or missions are space-based, air-based, or ground-based) supported by the transmitters, end-user terminals or receivers, or other radio frequency devices authorized to operate in each band of frequencies;

"(D) the total amount of spectrum, by band of frequencies, assigned or licensed to each Federal or non-Federal user (in percentage terms and in sum) and the geographic areas covered by their respective assignments or licenses;

"(E) the approximate number of transmitters, end-user terminals or receivers, or other radio frequency devices authorized to operate, as appropriate to characterize the extent of use of each radio service in each band of frequencies;

"(F) an approximation of the extent to which each Federal or non-Federal user is using, by geography, each band of frequencies, such as the amount and percentage of time of use, number of end users, or other measures as appropriate to the particular band and radio service; and

"(G) to the greatest extent possible—

"(i) contour maps or other information that illustrates the coverage area, receiver performance, and other parameters relevant to an assessment of the availability of spectrum in each band;

"(ii) for each band or range of frequencies, the identity of each entity offering unlicensed services and the types and approximate number of unlicensed intentional radiators verified or certified by the Commission that are authorized to operate; and

"(iii) for non-Federal users, any commercial names under which facilities-based service is offered to the public using the spectrum of the non-Federal user, including the commercial names under which the spectrum is being offered through resale.

"(2) Except as provided in subsection (e), create a centralized portal or Web site to make the inventory of the bands of frequencies required under paragraph (1) available to the public.

"(b) USE OF AGENCY RESOURCES.—In creating the inventory described in subsection (a)(1), the Assistant Secretary and the Commission shall first use agency resources, including existing databases, field testing, and recordkeeping systems, and only request information from Federal and non-Federal users if such information cannot be obtained using such agency resources.

"(c) REPORTS.—

"(1) IN GENERAL.—Except as provided in subsection (e), not later than 2 years after the date of enactment of this section and biennially thereafter, the Assistant Secretary and the Commission shall submit a report to the Committee on Commerce, Science, and Transportation of the Senate and to the Committee on Energy and Commerce of the House of Representatives containing—

"(A) the results of the inventory created under subsection (a)(1), including any update to the information in the inventory pursuant to subsection (d);

"(B) a description of any information the Assistant Secretary or the Commission determines is necessary for such inventory but that is unavailable; and

"(C) a description of any information not provided by any Federal or non-Federal user in accordance with subsections (e)(1)(B)(ii) and (e)(2)(C)(ii).

"(2) RELOCATION REPORT.—

"(A) IN GENERAL.—Except as provided in subsection (e), the Assistant Secretary and the Commission shall submit a report to the Committee on Commerce, Science, and Transportation of the Senate and the Committee on Energy and Commerce of the House of Representatives containing a recommendation of which spectrum, if any, should be reallocated or otherwise made available for shared access and an explanation of the basis for that recommendation.

"(B) DEADLINES.—The report required under subparagraph (A) shall be submitted not later than 2 years after the date of enactment of this section and every 2 years thereafter.

"(3) INVENTORY REPORT.—If the Assistant Secretary and the Commission have not conducted an inventory under subsection (a) to 10 gigahertz at least 90 days before the third report required under paragraph (1) is submitted, the Assistant Secretary and the Commission shall include an evaluation in such report and in every report thereafter of whether the burden of expanding the inventory to 10 gigahertz outweighs the benefit until such time as the Assistant Secretary and the Commission have conducted the inventory to 10 gigahertz.

"(d) MAINTENANCE AND UPDATING OF INFORMATION.—After the creation of the inventory required by subsection (a)(1), the Assistant Secretary and the Commission shall make all reasonable efforts to maintain and update the information required under such subsection on a quarterly basis, including when there is a transfer or auction of a license or a change in a permanent assignment or license.

"(e) NATIONAL SECURITY AND PUBLIC SAFETY INFORMATION.—

"(1) NONDISCLOSURE.—

"(A) IN GENERAL.—If the head of an executive agency of the Federal Government determines that public disclosure of certain information held by that agency or a licensee of non-Federal spectrum and required by subsection (a), (c), or (d) would reveal classified national security information or other information for which there is a legal basis for nondisclosure and such public disclosure would be detrimental to national security, homeland security, or public safety, the agency head shall notify the Assistant Secretary of that determination and shall include descriptions of the activities, capabilities, functions, or missions (including whether they are space-based, air-based, or ground-based) supported by the information being withheld.

"(B) INFORMATION PROVIDED.—The agency head shall provide to the Assistant Secretary—

"(i) the publicly releasable information required by subsection (a)(1);

"(ii) to the maximum extent practicable, a summary description, suitable for public release, of the classified national security information or other information for which there is a legal basis for nondisclosure; and

"(iii) a classified annex, under appropriate cover, containing the classified national security information or other information for which there is a legal basis for nondisclosure that the agency head has determined must be withheld from public disclosure.

"(2) PUBLIC SAFETY NONDISCLOSURE.—

"(A) IN GENERAL.—If a licensee of non-Federal spectrum determines that public disclosure of certain information held by that licensee and required to be submitted by subsection (a), (c), or (d) would reveal information for which public disclosure would be detrimental to public safety, or the licensee is otherwise prohibited by law from disclosing the information, the licensee may petition the Commission for a partial or total exemption from inclusion on the centralized portal or Web site under subsection (a)(2) and in the report required by subsection (c).

"(B) BURDEN.—The licensee seeking an exemption under this paragraph bears the burden of justifying the exemption and shall provide clear and convincing evidence to support such an exemption.

"(C) INFORMATION REQUIRED.—If an exemption is granted under this paragraph, the licensee shall provide to the Commission—

"(i) the publicly releasable information required by subsection (a)(1) for the inventory;

"(ii) to the maximum extent practicable, a summary description, suitable for public release, of the information for which public disclosure would be detrimental to public safety or the licensee is otherwise prohibited by law from disclosing; and

"(iii) an annex, under appropriate cover, containing the information that the

Commission has determined should be withheld from public disclosure.

"(3) ADDITIONAL DISCLOSURE.—The annexes required under paragraphs (1)(B)(iii) and (2)(C)(iii) shall be provided to the congressional committees listed in subsection (c), but shall not be disclosed to the public under subsection (a) or subsection (d) or provided to any unauthorized person through any other means.

"(4) NATIONAL SECURITY COUNCIL CONSULTATION.—Prior to the release of the inventory under subsection (a), any updates to the inventory resulting from subsection (d), or the submission of a report under subsection (c)(1), the Assistant Secretary and the Commission shall consult with the National Security Council for a period not to exceed 30 days for the purposes of determining what additional information, if any, shall be withheld from the public.

"(f) PROPRIETARY INFORMATION.—In creating and maintaining the inventory, centralized portal or Web site, and reports under this section, the Assistant Secretary and the Commission shall follow their rules and practice regarding confidential and proprietary information. Nothing in this subsection shall be construed to compel the

Commission to make publicly available any confidential or proprietary information.''.

SEC. 502. FEDERAL SPECTRUM PLANNING.

(a) REVIEW OF EVALUATION PROCESS.—Not later than 6 months after the date of enactment of this Act, the Comptroller General of the United States shall—

(1) conduct a review of the processes that Federal entities utilize to evaluate the spectrum needs of such entities;

(2) make recommendations on how to improve such processes; and

(3) submit to the appropriate committees of Congress a report on the review and recommendations made pursuant to paragraphs (1) and (2).

(b) REVISION OF EVALUATION PROCESS.—

(1) IN GENERAL.—Not later than 1 year after the date of enactment of this Act, each Federal entity shall update or revise the process used by such entity to evaluate the proposed spectrum needs of such entity, or establish such a process, taking into account any applicable recommendations made in the report required by subsection (a).

(2) REQUIRED INCLUSIONS.—

(A) ANALYSIS OF OPTIONS.—Each process described in paragraph (1), whether newly established, updated, or revised, shall include an analysis and assessment of—

(i) the options available to the Federal entity to obtain communications services that are the most spectrum-efficient; and

(ii) the effective alternatives available to such entity that will permit the entity to continue to satisfy the mission requirements of the entity.

(B) ANALYSIS SUBMITTED TO NTIA.—The analysis and assessment carried out under subparagraph (A) shall be submitted by the Federal entity to the Assistant Secretary at the same time that the entity seeks certification or recertification, if applicable, of spectrum support from the NTIA pursuant to the requirements of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 901 et seq.) and OMB Circular A–11.

(c) SPECTRUM PLANS OF FEDERAL ENTITIES.—

(1) IN GENERAL.—Not later than 2 years after the date of enactment of this Act, and every 2 years thereafter, each Federal entity shall provide an entity-specific strategic spectrum plan to the Assistant

Secretary and the Director of the Office of Management and Budget.

(2) REQUIRED INCLUSIONS.—Each strategic spectrum plan submitted under paragraph (1) shall include—

(A) the spectrum requirements of the entity;

(B) the planned uses of new technologies or expanded services requiring spectrum over a period of time to be determined by the entity;

(C) suggested spectrum-efficient approaches to meeting the spectrum requirements identified under subparagraph (A); and

(D) progress reports on the activities of the entity to improve its spectrum management.

(d) CLASSIFIED NATIONAL SECURITY INFORMATION AND CERTAIN OTHER INFORMATION.—

(1) IN GENERAL.—The head of a Federal entity shall take the actions described in paragraph (2) if such head determines that disclosure of information required by subsection (c) would reveal—

(A) information that is classified in accordance with Executive Order 13526 (50 U.S.C. 425 note) or any successor Executive order establishing or modifying the uniform system for classifying, safeguarding, and declassifying national security information; or

(B) other information for which there is a legal basis for nondisclosure and the public disclosure of which would be detrimental to national security, homeland security, or public safety.

(2) ACTIONS DESCRIBED.—The actions described in this paragraph are the following:

(A) Notification to the Assistant Secretary of the determination under paragraph (1).

(B) Provision to the Assistant Secretary of—

(i) the publicly releasable information required by subsection (c);

(ii) to the maximum extent practicable, a summary description, suitable for public release, of the classified information or other information for which there is a legal basis for nondisclosure; and

(iii) a classified annex, under appropriate cover, containing the classified information or other information for which there is a legal basis for nondisclosure that the head of the Federal entity has determined must be withheld from public disclosure.

(3) ANNEX RESTRICTION.—The Assistant Secretary shall make an annex described in paragraph (2)(B)(iii) available to the Secretary of Commerce and the Director of the Office of Management and Budget. Neither the Assistant Secretary, the Secretary of Commerce, nor the Director of the Office of Management and Budget may make any such annex available to the public or to any unauthorized person through any other means.

(e) FEDERAL STRATEGIC SPECTRUM PLAN.—

(1) DEVELOPMENT AND SUBMISSION.—

(A) IN GENERAL.—The Secretary of Commerce shall develop a Federal Strategic Spectrum Plan, in coordination with the Assistant Secretary and the Director of the Office of Management and Budget.

(B) SUBMISSION TO CONGRESS.—Not later than 6 months after the date by which the initial entity-specific strategic spectrum plans are required to be submitted to the Assistant Secretary under subsection (c)(1), the Secretary of Commerce shall, consistent with the requirements set forth in subsection (d)(3), submit the

Federal Strategic Spectrum Plan developed under subparagraph (A) to the appropriate committees of Congress.

(C) NONDISCLOSURE OF ANNEXES.—The Federal Strategic Spectrum Plan required to be submitted under subparagraph (B) shall be submitted in unclassified form, but shall include, if appropriate, 1 or more annexes as provided for by subsection (d)(2)(B)(iii). No congressional committee may make any such annex available to the public or to any unauthorized person.

(D) CLASSIFIED ANNEXES.—If the Federal Strategic Spectrum Plan includes a classified annex as provided for by subsection (d)(2)(B)(iii), the Secretary of Commerce shall—

(i) submit the classified annex only to the appropriate committees of Congress with primary oversight jurisdiction for the user entities or licensees concerned; and

(ii) provide notice of the submission to the other appropriate committees of Congress.

(E) DEFINITION.—In this subsection, the term 'appropriate committees of Congress' means the Committee on Commerce, Science, and Transportation of the Senate, the Committee on Energy and Commerce of the House of Representatives, and any other congressional committee with primary oversight jurisdiction for the user entity or licensees concerned.

(2) INCORPORATION OF ENTITY PLANS.—The Federal Strategic Spectrum Plan developed under paragraph (1)(A) shall incorporate, consistent with the requirements of subsection (d)(3), the initial entity-specific strategic spectrum plans submitted under subsection (c)(1).

(3) REQUIRED INCLUSIONS.—The Federal Strategic Spectrum Plan developed under paragraph (1)(A) shall include—

(A) information on how spectrum assigned to and used by Federal entities is being used;

(B) opportunities to increase efficient use of infrastructure and spectrum assigned to and used by Federal entities;

(C) an assessment of the future spectrum needs of the Federal Government; and

(D) plans to incorporate such needs in the frequency assignment, equipment certification, and review processes of the Assistant Secretary.

(4) UPDATES.—The Secretary of Commerce shall revise and update the Federal Strategic Spectrum Plan developed under paragraph (1)(A) to take into account the biennial submission of the entity-specific strategic spectrum plans submitted under subsection (c)(1).

(f) NATIONAL STRATEGIC SPECTRUM PLAN.—

(1) IN GENERAL.—Not later than 4 years after the date of enactment of this Act, and every 4 years thereafter, the Assistant Secretary and the Commission, in consultation with other Federal departments and agencies, State, local, and tribal entities, and commercial spectrum interests, shall develop a quadrennial National Strategic Spectrum Plan.

(2) REQUIRED INCLUSION.—A National Strategic Spectrum Plan developed under paragraph (1) shall include the following:

(A) The Federal Strategic Spectrum Plan developed under paragraph (1)(A) of subsection (e), as updated under paragraph (4) of such subsection.

(B) Long-range spectrum planning for both Federal and non-Federal users, including commercial users and State and local government users.

(C) An identification of new technologies or expanded services requiring spectrum.

(D) An identification and analysis of the nature and characteristics of the new radio communication systems required and the nature and characteristics of the spectrum required.

(E) An identification and analysis of efficient approaches to meeting the future spectrum requirements of all users, including—

(i) requiring certain standards-based technologies that improve spectrum efficiencies;

(ii) spectrum sharing and reuse opportunities;

(iii) possible reallocation; and

(iv) any other approaches that promote efficient use of spectrum.

(F) An evaluation of current spectrum auction processes to determine the effectiveness of such processes in—

(i) promoting competition;

(ii) improving the efficiency of spectrum use; and

(iii) maximizing the full economic value of the spectrum to consumers, industry, and taxpayers.

SEC. 503. REALLOCATING FEDERAL SPECTRUM FOR COMMERCIAL PURPOSES AND FEDERAL SPECTRUM SHARING.

(a) ELIGIBLE FEDERAL ENTITIES.—Section 113(g)(1) of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 923(g)(1)) is amended to read as follows:

"(1) ELIGIBLE FEDERAL ENTITIES.—Any Federal entity that operates a Federal Government station authorized to use a band of frequencies specified in paragraph (2) and that incurs relocation costs or sharing costs because of planning for a potential auction of spectrum frequencies, a planned auction of spectrum frequencies, or the reallocation of spectrum frequencies from Federal use to exclusive non-Federal use or to shared use shall receive payment for such relocation costs or sharing costs from the Spectrum Relocation Fund, in accordance with section 118. For purposes of this paragraph, Federal power agencies exempted under subsection (c)(4) that choose to relocate from the frequencies identified for reallocation pursuant to subsection (a) are eligible to receive payment under this paragraph.''.

(b) ELIGIBLE FREQUENCIES.—Section 113(g)(2)(B) of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 923(g)(2)(B)) is amended to read as follows:

"(B) any other band of frequencies reallocated from Federal use to non-Federal or shared use, whether for licensed or unlicensed use, after January 1, 2003, that is assigned—

"(i) by competitive bidding pursuant to section 309(j) of the Communications Act of 1934 (47 U.S.C. 309(j)); or

"(ii) as a result of an Act of Congress or any other administrative or executive direction.''.

(c) RELOCATION COSTS AND SHARING COSTS DEFINED.—Section 113(g)(3) of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 923(g)(3)) is amended to read as follows:

"(3) RELOCATION COSTS AND SHARING COSTS DEFINED.—

"(A) IN GENERAL.—For purposes of this subsection, the term 'relocation costs' or 'sharing costs' means the costs incurred by a Federal entity in connection with the auction (or a potential or planned auction) of spectrum frequencies previously assigned to such entity, or the sharing of spectrum frequencies assigned to such entity (including the auction or a potential or planned auction of the rights to use spectrum frequencies on a shared basis with such entity), respectively, in order to achieve comparable capability of systems as before the relocation or the sharing arrangement. Such term includes, with respect to relocation or sharing, as the case may be—

"(i) the costs of any modification or replacement of equipment, spares, associated ancillary equipment, software, facilities, operating manuals, training costs, or regulations that are attributable to relocation or sharing;

"(ii) the costs of all engineering, equipment, software, site acquisition, and construction, as well as any legitimate and prudent transaction expense, including term-limited Federal civil servant and contractor staff necessary to carry out the relocation or sharing activities of an eligible Federal entity, and reasonable additional costs incurred by the Federal entity that are attributable to relocation or sharing, including increased recurring costs associated with the replacement of facilities;

"(iii) the costs of research, engineering studies, economic analyses, or other expenses reasonably incurred in connection with—

"(I) calculating the estimated relocation costs or sharing costs that are provided to the Commission pursuant to paragraph (4);

"(II) determining the technical or operational feasibility of relocation to 1 or more potential relocation bands; or

"(III) planning for or managing a relocation or sharing project (including spectrum coordination with auction winners) or potential relocation or sharing project;

"(iv) the one-time costs of any modification of equipment reasonably necessary—

"(I) to accommodate commercial use of shared frequencies; or

"(II) in the case of eligible frequencies reallocated for exclusive commercial use and assigned through a competitive bidding process under section 309(j) of the Communications Act of 1934 (47 U.S.C. 309(j)) but with respect to which a Federal entity retains primary allocation or protected status for a period of time after the completion of the competitive bidding process, to accommodate shared Federal and non-Federal use of such frequencies for such period;

"(v) the costs associated with the accelerated replacement of systems and equipment if such acceleration is necessary to ensure the timely relocation of systems to a new frequency assignment or the timely accommodation of sharing of Federal frequencies; and "(vi) the costs of the use of commercial systems (including systems not utilizing spectrum) to replace Federal systems discontinued or relocated pursuant to this Act, including lease (including lease of land), subscription, and equipment costs over an appropriate period, such as the anticipated life of an equivalent Federal system or other period determined by the Director of the Office of Management and Budget.

"(B) COMPARABLE CAPABILITY OF SYSTEMS.—For purposes of subparagraph (A), comparable capability of systems—

"(i) may be achieved by relocating a Federal Government station to a new frequency assignment, by relocating a Federal Government station to a different geographic location, by modifying Federal Government equipment to mitigate interference or use less spectrum, in terms of bandwidth, geography, or time, and thereby permitting spectrum sharing (including sharing among relocated Federal entities and incumbents to make spectrum available for non-Federal use) or relocation, or by utilizing an alternative technology; and

"(ii) includes the acquisition of state-of-the-art replacement systems intended to meet comparable operational scope, which may include incidental increases in functionality.".

(d) CERTAIN PROCEDURAL REQUIREMENTS.—Section 113(g) of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 923(g)) is amended—

(1) in paragraph (4)(A)—

(A) by inserting "or sharing costs" after "relocation costs"; and

(B) by inserting "or sharing" after "such relocation";

(2) in paragraph (5)—

(A) by inserting "or sharing costs" after "relocation costs"; and

(B) by inserting "or sharing" after "for relocation"; and

(3) in paragraph (6)—

(A) in the 1st sentence, by inserting "and the timely implementation of arrangements for the sharing of such frequencies'' before the period at the end;

(B) in the 2nd sentence—

(i) by striking ''by relocating to a new frequency assignment or by utilizing an alternative technology'';

(ii) by inserting ''or limit'' after ''terminate''; and

(iii) by inserting ''or sharing arrangement has been implemented'' before the period at the end; and

(C) in the 3rd sentence, by inserting ''or sharing'' after ''relocation''.

(e) SPECTRUM SHARING AGREEMENTS.—Section 113(g) of the National Telecommunications and Information Administration Organization Act, as amended by subsection (d), is further amended by adding at the end the following:

''(7) SPECTRUM SHARING AGREEMENTS.—A Federal entity is permitted to allow access to its frequency assignments by a non-Federal entity upon approval of the NTIA, in consultation with the Director of the Office of Management and Budget. Such non-Federal entities shall comply with all applicable rules of the Commission and the NTIA, including any regulations promulgated pursuant to this section. Any remuneration associated with such access shall be deposited into the Spectrum Relocation Fund established under section 118. The costs incurred by a Federal entity as a result of allowing such access are sharing costs for which the entity is eligible for payment from the Fund for the purposes specified in paragraph (3). The revenue associated with such access shall be at least 110 percent of the estimated Federal costs.''.

(f) SPECTRUM RELOCATION FUND.—Section 118 of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 928) is amended—

(1) in subsection (b), by inserting before the period at the end the following: ''and any payments made by non-Federal entities for access to Federal spectrum pursuant to section 113(g)(7)'';

(2) by amending subsection (c) to read as follows:

''(c) USE OF FUNDS.—

''(1) FUNDS FROM AUCTIONS.—The amounts in the Fund from auctions of eligible frequencies are authorized to be used to pay relocation costs or sharing costs, as defined in section 113(g)(3), of an eligible Federal entity incurring such costs with respect to relocation from any eligible frequency or the sharing of such frequency.

"(2) FUNDS FROM PAYMENTS BY NON-FEDERAL ENTITIES.—The amounts in the Fund from payments by non-Federal entities for access to Federal spectrum pursuant to section 113(g)(7) are authorized to be used to pay the sharing costs, as defined in section 113(g)(3), of an eligible Federal entity incurring such costs with respect to such access.

"(3) TRANSFER OF FUNDS.—

"(A) IN GENERAL.—Subject to subparagraph (B), the Director of OMB may transfer at any time (including prior to any auction or contemplated auction or sharing initiative) such sums as may be available in the Fund to an eligible Federal entity to pay eligible relocation costs or sharing costs related to pre-auction estimates or research, as such costs are described in section 113(g)(3)(A)(iii).

"(B) NOTIFICATION.—No funds may be transferred pursuant to subparagraph (A) unless the notification provided under subsection (d)(2)(B) includes a certification from the Director of OMB that—

"(i) funds transferred before an auction will likely allow for timely implementation of relocation or sharing, thereby increasing net expected auction proceeds by an amount equal to or greater than the time value of the amount of funds transferred; and

"(ii) the auction is intended to occur not later than 5 years after transfer of funds.

"(C) APPLICABILITY.—

"(i) PRIOR COSTS INCURRED.—The Director of OMB may transfer up to $10,000,000 from the Fund to eligible Federal entities for eligible relocation costs or sharing costs related to pre-auction estimates or research, as such costs are described in section 113(g)(3)(A)(iii), for costs incurred prior to the date of the enactment of the Public Safety Broadband and Wireless Innovation Act of 2011, but after June 28, 2010.

"(ii) SUPPLEMENT NOT SUPPLANT.—Any amounts transferred by the Director of OMB pursuant to clause (i) shall be in addition to any amounts that the Director of OMB may transfer for costs incurred after the date of the enactment of the Public Safety Broadband and Wireless Innovation Act of 2011.'';

(3) in subsection (d)—

(A) in paragraph (1), by inserting ''and sharing costs'' after ''relocation costs'';

(B) in paragraph (2)—

(i) in subparagraph (A), by inserting ''or sharing'' before the semicolon; and

(ii) in subparagraph (B)—

(I) by inserting ''or sharing costs'' after ''relocation costs''; and

(II) by inserting ''or sharing'' before the period at the end; and

(C) by amending paragraph (3) to read as follows:

''(3) REVERSION OF UNUSED FUNDS.—

''(A) IN GENERAL.—Any amounts in the Fund that are remaining after the payment of the relocation costs and sharing costs that are payable from the Fund shall revert to and be deposited in the general fund of the Treasury not later than 8 years after the date of the deposit of such proceeds to the Fund, unless within 60 days in advance of the reversion of such funds, the Director of OMB, in consultation with the NTIA, notifies the appropriate committees of Congress that such funds are needed to complete or to implement current or future relocations or sharing initiatives.

"(B) DEFINITION.—In this paragraph, the term 'appropriate committees of Congress' means—

"(i) the Committee on Appropriations of the Senate;

"(ii) the Committee on Commerce, Science, and Transportation of the Senate;

"(iii) the Committee on Appropriations of the House of Representatives; and

"(iv) the Committee on Energy and Commerce of the House of Representatives.";

(4) in subsection (e)(2)—

(A) by inserting "or sharing costs" after "relocation costs";

(B) by striking "entity's relocation" and inserting "relocation of the entity or implementation of the sharing arrangement by the entity''; and

(C) by inserting ''or the implementation of such arrangement'' after ''such relocation''; and

(5) by adding at the end the following:

''(f) ADDITIONAL PAYMENTS FROM THE FUND.—

''(1) AMOUNTS AVAILABLE.—Notwithstanding subsections (c) through (e), after the date of the enactment of the Public Safety Broadband and Wireless Innovation Act of 2011, and following the credit of any amounts specified in subsection (b), there are hereby appropriated from the Fund and available to the Director of OMB—

''(A) up to 10 percent of the amounts deposited in the Fund from the auction of licenses for frequencies of spectrum vacated by Federal entities; and

''(B) up to 10 percent of the amounts deposited in the Fund by non-Federal entities for sharing of Federal spectrum.

''(2) USE OF AMOUNTS.—The Director of OMB, in consultation with the NTIA, may use such amounts to make payments to eligible Federal entities for the purpose of encouraging timely access to such spectrum, provided that—

"(A) any such payment by the Director of OMB is based on the market value of the spectrum, the timeliness with which the Federal entity cleared its use of such spectrum, and the need for such spectrum in order for the Federal entity to conduct its essential missions;

"(B) any such payment by the Director of OMB is used to carry out—

"(i) the purposes specified in clauses (i) through (vi) of section 113(g)(3)(A) to achieve enhanced capability for those systems affected by reallocation of Federal spectrum for commercial use, or by sharing of Federal frequencies with non-Federal entities; and

"(ii) other communications, radar, and spectrum-using investments not directly affected by such reallocation or sharing but essential for the missions of the Federal entity that is relocating its systems or sharing frequencies;

"(C) the amount remaining in the Fund after any such payment by the Director of OMB is not less than 10 percent of the winning bids in the relevant auction, or is not less than

10 percent of the payments from non-Federal entities in the relevant sharing agreement;

"(D) any such payment by the Director of OMB shall not be made until 30 days after the Director has notified the Committees on Appropriations and Commerce, Science, and Transportation of the Senate, and the Committees on Appropriations and Energy and Commerce of the House of Representatives; and

"(E) the Director of OMB shall make available from such amounts not more than $3,000,000 per year for each of the fiscal years 2012 through 2016 for use by the Assistant Secretary in carrying out the spectrum management activities of the Assistant Secretary under title V of the Public Safety Broadband and Wireless Innovation Act of 2011.".

(g) PUBLIC DISCLOSURE AND NONDISCLOSURE.—If the head of an executive agency of the Federal Government determines that public disclosure of any information contained in a notification or report required by section 113 or 118 of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 923; 928) would reveal classified national security information or other information for which there is a legal basis for nondisclosure and such public disclosure would be detrimental to national security, homeland security, public safety, or jeopardize law enforcement investigations, the head of the executive agency shall notify the Assistant Secretary of that determination prior to release of such information. In that event, such classified information shall be included in a separate annex, as needed. These annexes shall be provided to the subcommittee of primary jurisdiction of the congressional committee of primary jurisdiction in accordance with appropriate national security stipulations but shall not be disclosed to the public or provided to any unauthorized person through any other means.

SEC. 504. STUDY ON SPECTRUM EFFICIENCY THROUGH RECEIVER STANDARDS.

(a) IN GENERAL.—The Comptroller General of the United States shall conduct a study on efforts to ensure that each transmission system that employs radio spectrum is designed and operated so that reasonable use of adjacent spectrum does not excessively impair the functioning of such system.

(b) REQUIRED CONSIDERATIONS.—At a minimum, the study required by subsection (a) shall consider—

(1) the value of—

(A) improving receiver standards as it relates to increasing spectral efficiency;

(B) improving operation of services in adjacent frequencies;

(C) narrowing the guard bands between adjacent spectrum use; and

(D) improving overall receiver performance for the end user;

(2) the role of manufacturers, commercial licensees, and government users with respect to their transmission systems and use of adjacent spectrum described in subsection (a);

(3) the feasibility of industry self-compliance with respect to the design and operational requirements of transmission systems and the reasonable use of adjacent spectrum described in subsection (a); and

(4) the value of action by the Commission and the Assistant Secretary to establish, by rule, technical requirements or standards for non-Federal and Federal use, respectively, with respect to the reasonable use of adjacent spectrum described in subsection (a).

(c) REPORT.—Not later than 1 year after the date of enactment of this Act, the Comptroller General of the

United States shall submit a report to the appropriate committees of Congress on the results of the study required by subsection (a).

(d) DEFINITION.—For purposes of this section, the term "transmission system" means any telecommunications, broadcast, satellite, commercial mobile service, or other communications system that employs radio spectrum.

SEC. 505. UNLICENSED USE IN THE 5 GHZ BAND.

(a) MODIFICATION OF FCC REGULATIONS TO ALLOW CERTAIN UNLICENSED USE.—

(1) IN GENERAL.—Subject to paragraph (2), not later than 1 year after the date of the enactment of this Act, the Commission shall modify part 15 of title 47, Code of Federal Regulations, to allow unlicensed U-NII devices to operate in the 5350-5470 MHz band and the 5850-5925 MHz band.

(2) REQUIRED DETERMINATIONS.—The Commission may make the modification described in paragraph (1) only if the Commission determines that—

(A) licensed users will be protected by technical solutions, including use of existing, modified, or new spectrum-sharing technologies and solutions, such as dynamic frequency selection; and

(B) the primary mission of Federal spectrum users in the 5350–5470 MHz band and the 5850-5925 MHz band will not be compromised by the introduction of unlicensed devices.

(b) STUDY BY NTIA.—

(1) IN GENERAL.—The Assistant Secretary, in consultation with the Commission, shall conduct a study evaluating known and proposed spectrum-sharing technologies and the risk to Federal users if unlicensed U-NII devices were allowed to operate in the 5350-5470 MHz band and the 5850-5925 MHz band.

(2) SUBMISSION.—Not later than 8 months after the date of the enactment of this Act, the Assistant Secretary shall submit the study required by paragraph (1) to—

(A) the Commission; and

(B) the appropriate committees of Congress.

(c) DEFINITIONS.—In this section:

(1) 5350-5470 MHZ BAND.—The term "5350-5470 MHz band" means the portion of the electro-

magnetic spectrum between the frequencies from 5350 megahertz to 5470 megahertz.

(2) 5850-5925 MHZ BAND.—The term ''5850-5925 MHz band'' means the portion of the electromagnetic spectrum between the frequencies from 5850 megahertz to 5925 megahertz.

(3) U-NII DEVICES.—The term ''U-NII devices'' has the meaning given such term in section 15.403(s) of title 47, Code of Federal Regulations, except for the frequency bands specified in such section.

SEC. 506. REPORT ON AVAILABILITY OF WIRELESS EQUIPMENT FOR THE 700 MHZ BAND.

(a) IN GENERAL.—Not later than 90 days after the date of the enactment of this Act, and every 6 months thereafter until January 1, 2016, the Commission shall prepare and submit to the appropriate committees of Congress a report on—

(1) the availability of wireless equipment capable of operating over all spectrum between the frequencies from 698 megahertz to 806 megahertz that is allocated by the Commission for paired commercial use; and

(2) the potential availability of wireless equipment capable of operating over spectrum made avail-

able through reorganization of the television broadcast spectrum under section 302(b) and the auction of such spectrum under subparagraph (G) of section 309(j)(8) of the Communications Act of 1934, as added by section 302(a).

(b) CONTENTS.—The Commission shall seek input from the commercial mobile data service industry and include in the report required by subsection (a) an assessment of—

(1) the technical feasibility, and the potential impact on costs, size, battery consumption, and any other factor the Commission considers appropriate, of making equipment capable of operating over some or all of the spectrum described in paragraph (1) of such subsection;

(2) the timeframe for when wireless equipment capable of operating over some or all of such spectrum will be available; and

(3) the feasibility of and progress towards making available wireless equipment that is capable of operating over some or all of the spectrum described in paragraph (2) of such subsection.

[DISCUSSION DRAFT]

112TH CONGRESS
1ST SESSION

H. R. _____

To promote nationwide deployment of an interoperable public safety broadband network, to make available additional spectrum for wireless broadband services, to reduce the deficit, to promote job growth, and for other purposes.

IN THE HOUSE OF REPRESENTATIVES

M__. ____________ introduced the following bill; which was referred to the Committee on ______________________________

A BILL

To promote nationwide deployment of an interoperable public safety broadband network, to make available additional spectrum for wireless broadband services, to reduce the deficit, to promote job growth, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE; TABLE OF CONTENTS.

(a) SHORT TITLE.—This Act may be cited as the "Spectrum Innovation Act of 2011".

(b) TABLE OF CONTENTS.—The table of contents for this Act is as follows:

SEC. 2. DEFINITIONS.

In this Act:

(1) ADMINISTRATOR.—The term “Administrator” means the entity awarded a contract by the Commission under section 203(a) to serve as Administrator of the National Public Safety Communications Plan.

(2) BOARD.—The term “Board” means the Public Safety Communications Planning Board established under section 202(a)(1).

(3) BROADCAST TELEVISION LICENSEE.—The term “broadcast television licensee” means a person holding a license to use a portion of the broadcast

television spectrum to operate a full-power television station.

(4) BROADCAST TELEVISION SPECTRUM.—The term ‘‘broadcast television spectrum’’ means the portions of the electromagnetic spectrum between the frequencies from 54 megahertz to 72 megahertz, from 76 megahertz to 88 megahertz, from 174 megahertz to 216 megahertz, and from 470 megahertz to 698 megahertz.

(5) COMMERCIAL MOBILE BROADBAND SERVICE.—The term ‘‘commercial mobile broadband service’’ means broadband service (as defined by the Commission) that is provided by a provider of commercial mobile service (as defined in section 332 of the Communications Act of 1934 (47 U.S.C. 332)).

(6) COMMISSION.—The term ‘‘Commission’’ means the Federal Communications Commission.

(7) FEDERAL ENTITY.—The term ‘‘Federal entity’’ has the meaning given such term in section 113 of the National Telecommunications and Information Administration Organization Act (47 U.S.C. 923).

(8) FORWARD AUCTION.—The term ‘‘forward auction’’ means the portion of an incentive auction of broadcast television spectrum under section

103(c), in which the Commission assigns licenses for the use of or allocates for unlicensed use the spectrum usage rights with respect to which the Commission accepts bids for voluntary relinquishment in a reverse auction under section 103(a).

(9) INCENTIVE AUCTION.—The term ''incentive auction'' means a system of competitive bidding under section 309(j) of the Communications Act of 1934 (47 U.S.C. 309(j)) in which spectrum auctioned is attributable to the voluntary relinquishment of spectrum usage rights by licensees, with whom a portion of auction proceeds may be shared in accordance with subparagraph (F) of paragraph (8) of such section, as added by section 102(3).

(10) LOCAL MARKET.—The term ''local market'' has the meaning given such term in section 338 of the Communications Act of 1934 (47 U.S.C. 338).

(11) MULTICHANNEL VIDEO PROGRAMMING DISTRIBUTOR.—The term ''multichannel video programming distributor'' has the meaning given such term in section 602 of the Communications Act of 1934 (47 U.S.C. 522).

(12) NATIONAL PUBLIC SAFETY COMMUNICATIONS PLAN.—The term ''National Public Safety

Communications Plan'' or ''Plan'' means the plan adopted under section 202(c).

(13) NTIA.—The term ''NTIA'' means the National Telecommunications and Information Administration.

(14) PUBLIC SAFETY ANSWERING POINT.—The term ''public safety answering point'' has the meaning given such term in section 222 of the Communications Act of 1934 (47 U.S.C. 222).

(15) PUBLIC SAFETY COMMUNICATIONS.—The term ''public safety communications'' means communications by providers of public safety services.

(16) PUBLIC SAFETY SERVICES.—The term ''public safety services'' has the meaning given such term in section 337 of the Communications Act of 1934 (47 U.S.C. 337).

(17) PUBLIC SAFETY SPECTRUM.—The term ''public safety spectrum'' means the portion of the electromagnetic spectrum allocated for public safety services under section 337(a) of the Communications Act of 1934 (47 U.S.C. 337(a)).

(18) REVERSE AUCTION.—The term ''reverse auction'' means the portion of an incentive auction of broadcast television spectrum under section 103(a), in which a broadcast television licensee may

submit bids stating the amount it would accept for voluntarily relinquishing some or all of its broadcast television spectrum usage rights.

(19) STATE.—The term "State" has the meaning given such term in section 3 of the Communications Act of 1934 (47 U.S.C. 153).

(20) STATE PUBLIC SAFETY BROADBAND COMMUNICATIONS NETWORK.—The term "State public safety broadband communications network" means a broadband network for public safety communications established by a State using the public safety spectrum.

(21) ULTRA HIGH FREQUENCY.—The term "ultra high frequency" means, with respect to a television channel, that the channel is located in the portion of the electromagnetic spectrum between the frequencies from 470 megahertz to 698 megahertz.

(22) VERY HIGH FREQUENCY.—The term "very high frequency" means, with respect to a television channel, that the channel is located in the portion of the electromagnetic spectrum between the frequencies from 54 megahertz to 72 megahertz, from 76 megahertz to 88 megahertz, or from 174 megahertz to 216 megahertz.

SEC. 3. RULE OF CONSTRUCTION.

Each range of frequencies described in this Act shall be construed to be inclusive of the upper and lower frequencies in the range.

SEC. 4. ENFORCEMENT.

(a) IN GENERAL.—The Commission shall enforce this Act as if this Act were a part of the Communications Act of 1934 (47 U.S.C. 151 et seq.). A violation of this Act, or a regulation promulgated under this Act, shall be considered to be a violation of the Communications Act of 1934, or a regulation promulgated under such Act, respectively.

(b) EXCEPTION.—Subsection (a) does not apply in the case of a provision of this Act that is expressly required to be carried out by an agency (as defined in section 551 of title 5, United States Code) other than the Commission.

TITLE I—SPECTRUM AUCTION AUTHORITY

SEC. 101. DEADLINE FOR AUCTION OF CERTAIN SPECTRUM.

(a) IN GENERAL.—Notwithstanding paragraph (15)(A) of section 309(j) of the Communications Act of 1934 (47 U.S.C. 309(j)), not later than 10 years after the date of the enactment of this Act, subject to subsection (c), the Commission shall, through a system of competitive bidding under such section, grant licenses for the use of or allocate for unlicensed use (as described in paragraph (17) of such section, as added by section 104(a)(3)) the portions of the electromagnetic spectrum described in subsection (b).

(b) SPECTRUM DESCRIBED.—The portions of the electromagnetic spectrum described in this subsection are the following:

(1) The frequencies between 1915 megahertz and 1920 megahertz and between 2020 megahertz and 2025 megahertz (the AWS-2 H Block).

(2) The frequencies between 1755 megahertz and 1780 megahertz and between 2155 megahertz and 2180 megahertz (the AWS-3 band).

(3) The frequencies between 5350 megahertz and 5470 megahertz and between 5850 megahertz and 5925 megahertz.

(4) The frequencies between 1670 megahertz and 1710 megahertz and between 2070 megahertz and 2110 megahertz.

(5) The frequencies between 1780 megahertz and 1800 megahertz and between 2180 megahertz and 2200 megahertz.

(c) INCUMBENT FEDERAL USE.—

(1) IN GENERAL.—Not later than a date that will allow the Commission to meet the deadline in subsection (a), the NTIA shall—

(A) except as provided in subparagraph (B), withdraw any assignment to a Federal entity of a portion of the electromagnetic spectrum described in paragraph (3), (4), or (5) of subsection (b);

(B) if the NTIA determines that Federal use of such a portion is necessary to the critical communications related to the mission of the Federal entity and that Federal and non-Federal use of such portion may be coordinated by means of the database established under paragraph (2)(A), modify the terms under which the Federal entity is permitted to use such portion so that such use is subject to coordination by means of the database; and

(C) notify the Commission of each withdrawal under subparagraph (A) and each determination and modification under subparagraph (B).

(2) DATABASE.—

(A) IN GENERAL.—The NTIA, in consultation with the Commission, shall establish and maintain a database to coordinate Federal and non-Federal use of any portions of the electromagnetic spectrum with respect to which the NTIA has made a determination under paragraph (1)(B).

(B) COORDINATION.—The database established under subparagraph (A) may be used to coordinate the use of such portions of the electromagnetic spectrum by Federal and non-Federal users based on usage parameters that include geographic area, time, and specific frequencies within such portions.

(C) NTIA REGULATIONS.—The NTIA, in coordination with the Commission, shall promulgate regulations to govern use of such portions of the electromagnetic spectrum by Federal entities.

(D) COMMISSION REGULATIONS.—The Commission, in coordination with the NTIA, shall promulgate regulations to govern use of such portions of the electromagnetic spectrum by entities that are not Federal entities.

(3) LIMITATIONS ON NON-FEDERAL ASSIGNMENT OR ALLOCATION.—In conducting the competitive bidding required by subsection (a), the Commis-

sion may only grant licenses for the use of or allocate for unlicensed use a portion of the electromagnetic spectrum described in paragraph (3), (4), or (5) of subsection (b) that is assigned to a Federal entity—

(A) after receiving from the NTIA a notification under paragraph (1)(C) with respect to such portion; and

(B) in the case of a portion with respect to which the NTIA has made a determination under paragraph (1)(B), subject to coordination with use by Federal entities by means of the database established under paragraph (2)(A).

SEC. 102. GENERAL AUTHORITY FOR INCENTIVE AUCTIONS.

Section 309(j)(8) of the Communications Act of 1934 (47 U.S.C. 309(j)(8)) is amended—

(1) in subparagraph (A), by striking "(D), and (E)," and inserting "(D), (E), and (F),";

(2) in subparagraph (C)(i), by striking "subparagraph (E)(ii)" and inserting "subparagraphs (E)(ii) and (F)"; and

(3) by adding at the end the following:

"(F) INCENTIVE AUCTIONS.—

"(i) IN GENERAL.—Notwithstanding subparagraph (A) and except as provided in subparagraph (B), the Commission may encourage a licensee to relinquish voluntarily some or all of its licensed spectrum usage rights in order to permit the assignment of new initial licenses or allocation of spectrum for unlicensed use (as described in paragraph (17)) by sharing with such licensee a portion of the proceeds (including deposits and upfront payments from successful bidders) from the use of a competitive bidding system under this subsection.

"(ii) LIMITATIONS.—The Commission may not enter into a relinquishment and sharing agreement with a licensee under this subparagraph unless—

"(I) the Commission conducts a reverse auction to determine the amount of compensation that licensees would accept in return for voluntarily relinquishing spectrum usage rights; and

"(II) at least one other licensee bids in the reverse auction.".

SEC. 103. SPECIAL REQUIREMENTS FOR INCENTIVE AUCTION OF BROADCAST TV SPECTRUM.

(a) REVERSE AUCTION TO IDENTIFY INCENTIVE AMOUNT.—

(1) IN GENERAL.—The Commission may conduct a reverse auction to determine the amount of compensation that each broadcast television licensee would accept in return for voluntarily relinquishing some or all of its broadcast television spectrum usage rights for assignment or reallocation for unlicensed use through a system of competitive bidding under subparagraph (F) of section 309(j)(8) of the Communications Act of 1934, as added by section 102(3).

(2) ELIGIBLE RELINQUISHMENTS.—Only the following shall be considered a relinquishment of usage rights for purposes of paragraph (1):

(A) Relinquishing all usage rights with respect to a particular television channel without receiving in return any usage rights with respect to another television channel.

(B) Relinquishing all usage rights with respect to an ultra high frequency television channel in return for receiving usage rights with respect to a very high frequency television channel.

(C) Relinquishing usage rights in order to share a television channel with another licensee.

(D) Any other voluntary relinquishment of usage rights that the Commission considers to be in the interest of the auction.

(3) WINNING BIDS.—

(A) DETERMINATION BY COMMISSION.— The Commission shall examine the bids in a reverse auction under paragraph (1) and determine the amount of compensation that achieves the proper balance between the spectrum usage rights that will be freed and the amount that the Commission must pay in order for the licensees to relinquish such rights.

(B) ACCEPTANCE.—The Commission may accept a bid of a licensee that is less than or equal to such amount of compensation, and the relinquishment shall be binding on the licensee, subject to subsection (c)(2)(B).

(4) CONFIDENTIALITY.—The Commission shall take all steps necessary to protect the confidentiality of a licensee participating in a reverse auction under paragraph (1), including withholding the identity of such licensee until the reassignments and realloca-

tions under subsection (b)(1) become effective, as described in subsection (f)(2).

(5) PROTECTION OF CARRIAGE RIGHTS OF LICENSEES SHARING A CHANNEL.—A broadcast television licensee the signal of which was required to be carried pursuant to section 338, 614, or 615 of the Communications Act of 1934 (47 U.S.C. 338; 534; 535) on November 30, 2010, and that voluntarily relinquishes spectrum usage rights under this subsection in order to share a television channel with another licensee shall retain the same rights to carriage under such section that the licensee would have had if not sharing a channel.

(b) REORGANIZATION OF BROADCAST TV SPECTRUM.—

(1) IN GENERAL.—The Commission may evaluate the broadcast television spectrum and may—

(A) make such reassignments of television channels as the Commission considers appropriate; and

(B) reallocate for other use such portions of the broadcast television spectrum as the Commission determines are available for reallocation.

(2) FACTORS FOR CONSIDERATION.—In making reassignments and reallocations under paragraph (1), the Commission shall make reasonable efforts to preserve viewer access to the over-the-air signals of broadcast television licensees and replicate the station service areas and covered populations of such licensees, as in existence before the reassignments and reallocations.

(3) NO INVOLUNTARY RELOCATION FROM UHF TO VHF.—In making reassignments under paragraph (1)(A), the Commission may not reassign a broadcast television licensee from an ultra high frequency television channel to a very high frequency television channel unless the Commission accepts a bid for such relinquishment from such licensee under subsection (a)(3)(B).

(4) LOW-POWER BROADCAST TELEVISION STATIONS.—

(A) IN GENERAL.—The Commission may require a low-power broadcast television station that is impacted by reorganization of the broadcast television spectrum under this subsection to relocate from an ultra high frequency television channel to a very high frequency television channel, to the extent that any suitable very high frequency television channels remain available after any reassignments or reallocations under paragraph (1).

(B) FACTORS FOR CONSIDERATION.—In deciding whether to require a low-power broadcast television station to relocate under subparagraph (A), the Commission shall consider market factors including—

(i) the number of over-the-air viewers of such station; and

(ii) the presence of other broadcast television stations in the community served.

(5) PAYMENT OF RELOCATION COSTS.—

(A) IN GENERAL.—Except as provided in subparagraph (B), from amounts made available under subsection (d)(2)(A), the Commission shall reimburse costs reasonably incurred by—

(i) a broadcast television licensee that was reassigned under paragraph (1)(A) from one ultra high frequency television channel to a different ultra high frequency television channel or from one very high frequency television channel to a different very high frequency television channel, in order for the licensee to relocate its television service from one channel to the other; or

(ii) a multichannel video programming distributor that is required by section 338, 614, or 615 of the Communications Act of 1934 (47 U.S.C. 338; 534; 535) to carry the signal of a broadcast television licensee described in clause (i) or a broadcast television licensee that voluntarily relinquishes spectrum usage rights under subsection (a) to share a television channel with another licensee, in order for the multichannel video programming distributor to continue complying with such section with respect to the licensee after the reassignment or sharing arrangement.

(B) REGULATORY RELIEF.—In lieu of reimbursement for relocation costs under subparagraph (A), a broadcast television licensee [or multichannel video programming distributor] may accept, and the Commission may grant as it considers appropriate, a waiver or modification of the application to such licensee [or distributor] of any provision of law administered by the Commission, or any regulation of the Commission promulgated under any such provision.

(C) LIMITATION.—The Commission may not make reimbursements under subparagraph (A) of revenues lost—

(i) by a broadcast television licensee in connection with relocation; or

(ii) by a multichannel video programming distributor in connection with continued compliance with carriage obligations.

(D) DEADLINE.—The Commission shall make all reimbursements required by subparagraph (A) not later than the date that is 3 years after the completion of a forward auction under subsection (c)(1).

(c) FORWARD AUCTION.—

(1) IN GENERAL.—The Commission may conduct a forward auction in which the Commission—

(A) assigns licenses for the use of or allocates for unlicensed use the spectrum that the Commission determines is available under subsection (b)(1)(B);

(B) shares with each licensee whose bid the Commission accepts under subsection (a)(3)(B) an amount of the proceeds that is equal to the amount of such bid; and

(C) notwithstanding section 309(j)(8) of the Communications Act of 1934 (47 U.S.C. 309(j)(8)), deposits in the TV Broadcaster Relocation Fund established under subsection (d)(1) an amount of the proceeds from such forward auction that is sufficient to cover the costs for which the Commission is required to make reimbursements under subsection (b)(5)(A).

(2) RESERVE PRICES.—

(A) IN GENERAL.—In conducting a forward auction under paragraph (1), the Commission shall set such reserve prices as are necessary in order for the proceeds to be greater than or equal to the sum of—

(i) the total amount of the bids the Commission accepts under subsection (a)(3)(B);

(ii) the costs of conducting such forward auction that the salaries and expenses account of the Commission is required to retain under section 309(j)(8)(B) of the Communications Act of 1934 (47 U.S.C. 309(j)(8)(B)); and

(iii) the estimated costs for which the Commission is required to make reimbursements under subsection (b)(5)(A).

(B) INSUFFICIENT PROCEEDS.—If the amount of the proceeds from a forward auction under paragraph (1) is not greater than or equal to the sum described in subparagraph (A), no licenses shall be assigned or spectrum allocated for unlicensed use through such forward auction, any reassignments or reallocations under subsection (b)(1) shall not become effective, and the Commission may not revoke any spectrum usage rights by reason of a bid that the Commission accepts under subsection (a)(3)(B).

(C) ADMINISTRATIVE COSTS.—The amount of the proceeds from a forward auction under paragraph (1) that the salaries and expenses account of the Commission is required to retain under section 309(j)(8)(B) of the Communications Act of 1934 (47 U.S.C. 309(j)(8)(B)) shall be sufficient to cover the costs incurred by the Commission in conducting a reverse auction under subsection (a)(1) and making any reassignments or reallocations under subsection (b)(1), in addition to the costs incurred by the Commission in conducting such forward auction.

(3) FACTOR FOR CONSIDERATION.—In conducting a forward auction under paragraph (1), the Commission shall consider assigning licenses that cover geographic areas of a variety of different sizes.

(d) TV BROADCASTER RELOCATION FUND.—

(1) ESTABLISHMENT.—There is established in the Treasury of the United States a fund to be known as the TV Broadcaster Relocation Fund.

(2) BORROWING AUTHORITY AND REIMBURSEMENT.—

(A) BORROWING AUTHORITY.—Beginning on [________________] and ending on the date that is 3 years after the completion of a forward auction under subsection (c)(1), the Commission may borrow from the Treasury of the United States an amount not to exceed [$______________] to make the reimbursements required by subsection (b)(5)(A).

(B) REIMBURSEMENT.—The Commission shall reimburse the Treasury, without interest, for amounts borrowed under subparagraph (A) as funds are deposited into the TV Broadcaster Relocation Fund.

(3) TRANSFER OF UNUSED FUNDS.—If there is a balance remaining in the TV Broadcaster Relocation Fund on the date that is 3 years after the completion of a forward auction under subsection (c)(1), the Secretary of the Treasury shall transfer such balance to the general fund of the Treasury of the United States, where such balance shall be dedicated for the sole purpose of deficit reduction.

(e) ONE REVERSE AUCTION AND ONE FORWARD AUCTION.—The Commission may not conduct more than one reverse auction under subsection (a)(1) or more than one forward auction under subsection (c)(1).

(f) TIMING.—

(1) CONTEMPORANEOUS AUCTIONS AND REORGANIZATION PERMITTED.—The Commission may conduct a reverse auction under subsection (a)(1), any reassignments or reallocations under subsection (b)(1), and a forward auction under subsection (c)(1) on a contemporaneous basis.

(2) EFFECTIVENESS OF REASSIGNMENTS AND REALLOCATIONS.— Notwithstanding paragraph (1), any reassignments or reallocations under subsection (b)(1) shall not become effective until the completion of a reverse auction under subsection (a)(1) and a forward auction under subsection (c)(1).

(3) DEADLINE.—The Commission may not conduct a reverse auction under subsection (a)(1) or a forward auction under subsection (c)(1) after the date that is 5 years after the date of the enactment of this Act.

(4) LIMIT ON DISCRETION REGARDING AUCTION TIMING.—Section 309(j)(15)(A) of the Communications Act of 1934 (47 U.S.C. 309(j)(15)(A)) shall not apply in the case of an auction conducted under this section.

(g) LIMITATION ON REORGANIZATION AUTHORITY.— During the 5-year period beginning on the date of the enactment of this Act, the Commission may not curtail the spectrum usage rights of a broadcast television licensee or reassign such a licensee to another television channel except—

(1) in accordance with this section; or

(2) in the case of a violation by such licensee of the terms of its license or a specific provision of

a statute administered by the Commission, or a regulation of the Commission promulgated under any such provision.

(h) PROTEST RIGHT INAPPLICABLE.—The right of a licensee to protest a proposed order of modification of its license under section 316 of the Communications Act of 1934 (47 U.S.C. 316) shall not apply in the case of a broadcast television licensee—

(1) during the period beginning on the date of the enactment of this Act and ending on the earlier of—

(A) the completion of a reverse auction under subsection (a)(1), any reassignments or reallocations under subsection (b)(1), and a forward auction under subsection (c)(1); or

(B) the date that is 5 years after such date of enactment; or

(2) after the expiration of the period described in paragraph (1), to a modification made in connection with such a reverse auction, any such reassignments or reallocations, or such a forward auction.

SEC. 104. USE OF AUCTIONS TO ALLOCATE SPECTRUM FOR UNLICENSED USE.

(a) IN GENERAL.—Section 309(j) of the Communications Act of 1934 (47 U.S.C. 309(j)) is amended—

(1) in paragraph (6)(A), by inserting "except as provided in paragraph (17)," before "alter spectrum allocation criteria";

(2) in paragraph (7)(A), by inserting "(except as provided in paragraph (17))" before ", and in prescribing"; and

(3) by adding at the end the following new paragraph:

"(17) ALLOCATION OF SPECTRUM FOR UNLICENSED USE.—The Commission may only exercise its authority under this Act to allocate a portion of the spectrum for unlicensed use if—

"(A) the Commission conducts a system of competitive bidding under this subsection in which bids may be placed—

"(i) for the allocation of such portion for unlicensed use; and

"(ii) for a license for the use of such portion; and

"(B) the bids for unlicensed use, in the aggregate, exceed the highest bid for such license.".

(b) COORDINATION OF UNLICENSED USE THROUGH DATABASE.—

(1) ESTABLISHMENT OF DATABASE.—The Commission shall establish and maintain a database to coordinate the unlicensed use of the portions of the electromagnetic spectrum allocated for such use through a system of competitive bidding under section 309(j) of the Communications Act of 1934 (47 U.S.C. 309(j)) (as described in paragraph (17) of such section) by devices designed to use such portions on an unlicensed basis. The database shall be established and functioning not later than [__________] after the date of the enactment of this Act.

(2) DEVICE REQUIREMENTS.—

(A) IN GENERAL.—Section 303 of the Communications Act of 1934 (47 U.S.C. 303) is amended by adding at the end the following new subsection:

''(cc) Require that a device designed to use a portion of the electromagnetic spectrum allocated for unlicensed use through a system of competitive bidding under section 309(j) (as described in paragraph (17) of such section) coordinate its use of such portion with that of other such devices through the database established under section 104(b)(1) of the Spectrum Innovation Act of 2011, if such device is shipped in interstate commerce or manufactured in the United States, for sale or resale to the public.''.

(B) EFFECTIVE DATE.—The amendment made by subparagraph (A) shall apply with respect to devices shipped or manufactured after the date that is [__________] after the date of the enactment of this Act.

SEC. 105. ADMINISTRATION OF AUCTIONS BY COMMISSION.

Section 309(j) of the Communications Act of 1934, as amended by section 104(a), is further amended by adding at the end the following new paragraph:

''(18) CERTAIN BIDDING AND LICENSING CONDITIONS PROHIBITED.—In assigning licenses or allocating spectrum for unlicensed use through a system of competitive bidding under this subsection, the Commission may not—

''(A) impose any condition on the licenses assigned through such system that—

''(i) limits the ability of a licensee to manage the use of its network, including management of the use of applications, services, or devices on its network, or to prioritize the traffic on its network as it chooses; or "(ii) requires a licensee to sell access to its network on a wholesale basis;

"(B) limit participation in such system on the basis of the total amount of spectrum licenses held by a person seeking such participation; or

"(C) impose any other condition on eligibility for participation in such system or for the holding of a license granted through such system that is not related to [the qualifications of an applicant under subsection (a) or section 308(b) or 310].".

SEC. 106. EXTENSION OF AUCTION AUTHORITY.

Section 309(j)(11) of the Communications Act of 1934 (47 U.S.C. 309(j)(11)) is amended by striking "2012" and inserting "2021".

SEC. 107. DEFICIT REDUCTION AND FUNDING PRIORITIZATION.

(a) IN GENERAL.—Notwithstanding section 309(j)(8)(A) of the Communications Act of 1934 (47 U.S.C. 309(j)(8)(A)), from so much of the proceeds from auctions specified in subsection (b) as exceed the deposits and payments specified in subsection (c), the Commission shall deposit [$________________] in the Public Safety

Broadband Communications Implementation Fund established by section 204(g)(1).

(b) SPECIFIED AUCTIONS.—The auctions specified in this subsection are auctions under section 309(j) of the Communications Act of 1934 (47 U.S.C. 309(j)) that are—

(1) required by section 101(a); or

(2) conducted under paragraph (8)(F) of such section 309(j).

(c) SPECIFIED DEPOSITS AND PAYMENTS.—The deposits and payments specified in this subsection are—

(1) with respect to each auction specified in subsection (b), the deposits and payments required by paragraph (8) of such section 309(j), except subparagraph (A) of such paragraph, and section 103(c); and

(2) deposits in the Treasury of the United States under such subparagraph totaling [$________________].

TITLE II—PUBLIC SAFETY COMMUNICATIONS

SEC. 201. REASSIGNMENT OF PUBLIC SAFETY SPECTRUM TO STATES.

(a) PUBLIC SAFETY BROADBAND SPECTRUM.—

(1) IN GENERAL.—Subject to paragraph (2), not later than [____________], the Commission shall assign to each State a license for the exclusive use within such State of the portion of the electromagnetic spectrum between the frequencies from 763 megahertz to 768 megahertz and from 793 megahertz to 798 megahertz.

(2) EXISTING PUBLIC SAFETY BROADBAND NETWORKS.—

(A) SPECIAL TEMPORARY AUTHORITY FOR CONTINUED OPERATIONS.—The Commission may permit a public safety broadband network operating in the portion of the electromagnetic spectrum described in paragraph (1) [on the day before the deadline described in such paragraph] to continue operating in such portion of the spectrum under special temporary authority.

(B) CHANGES IN OPERATIONS.—Any changes in the operations of a public safety broadband network operating under special temporary authority under subparagraph (A) shall be approved by the Administrator and in compliance with the Plan.

(b) PUBLIC SAFETY NARROWBAND SPECTRUM.—

(1) NO FURTHER NARROWBAND DEVELOPMENT.—The Commission may not permit the public safety spectrum to be used by a narrowband land mobile radio system unless such system was purchased before September 1, 2011.

(2) REALLOCATION FOR BROADBAND USE.—The Commission, in consultation with the Administrator, shall develop a plan for reallocating for broadband public safety communications the portion of the electromagnetic spectrum between the frequencies from 768 megahertz to 775 megahertz and from 798 megahertz to 805 megahertz.

(3) ISSUANCE OF LICENSES.—Not later than 10 years after the date of the enactment of this Act, the Commission shall reissue the licenses described in subsection (a)(1) to include the spectrum described in paragraph (2).

(c) LICENSE TERMS AND CONDITIONS.—

(1) IN GENERAL.—A license for the use of the public safety spectrum issued to a State under this section shall include the following terms and conditions:

(A) The State shall, subject to the approval of the Administrator and in accordance with the Plan, contract for the construction and operation of a broadband network for public safety communications using such spectrum.

(B) The State may not partition or disaggregate the license or otherwise transfer control of the license, or any part thereof, to any other entity, including a political subdivision of the State.

(2) SERVICE AND TECHNICAL RULES.—The Commission shall by regulation establish service and technical rules consistent with this title for the licenses issued under this section.

(d) USE BY INDIAN TRIBES.—Notwithstanding subsection (a)(1), the Commission may assign a license for the use of the public safety spectrum to ⟦an Indian tribe⟧/⟦a tribal organization⟧ (as defined in section 4 of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 450b)) for public safety communications in accordance with such terms and conditions as the Commission considers appropriate. For purposes of the preceding sentence, ⟦an Indian tribe⟧/⟦a tribal organization⟧ shall be considered a State or local government entity for purposes of section 337(f)(1)(B) of the Communications Act of 1934 (47 U.S.C. 337(f)(1)(B)).

(e) CONFORMING AMENDMENTS.—Section 337(d)(3) of the Communications Act of 1934 (47 U.S.C. 337(d)(3)) is amended—

(1) in the matter preceding subparagraph (A), by striking ''public safety services licensees and commercial licensees'';

(2) in subparagraph (A), by inserting ''public safety services licensees and commercial licensees'' before ''to aggregate''; and

(3) in subparagraph (B), by inserting ''commercial licensees'' before ''to disaggregate''.

SEC. 202. NATIONAL PUBLIC SAFETY COMMUNICATIONS PLAN.

(a) ESTABLISHMENT OF PUBLIC SAFETY COMMUNICATIONS PLANNING BOARD.—

(1) IN GENERAL.—Not later than 180 days after the date of the enactment of this Act, the Commission shall establish a board to be known as the Public Safety Communications Planning Board.

(2) MEMBERSHIP.—The membership of the Board shall be as follows:

(A) FEDERAL MEMBERS.—

(i) IN GENERAL.—Four Federal members as follows:

(I) The Chairman of the Commission, or a designee, who shall be the Chair of the Board.

(II) The Assistant Secretary of Commerce for Communications and Information, or a designee.

(III) The Director of the Office of Emergency Communications in the Department of Homeland Security, or a designee.

(IV) The Director of the National Institute of Standards and Technology, or a designee.

(ii) DESIGNEES.—If a Federal official designates a designee under clause (i), such designee shall be an officer or employee of the agency of the official, except that the Chairman of the Commission may designate another Commissioner of the Commission or an officer or employee of the Commission.

(B) NON-FEDERAL MEMBERS.—Nine non-Federal members as follows:

(i) Two members who represent providers of commercial mobile broadband service, with one representing providers that have nationwide coverage areas and one representing providers that have regional coverage areas.

(ii) Two members who represent manufacturers of mobile wireless network equipment.

(iii) Five members who represent the interests of State and local governments, chosen to reflect geographic and population density differences across the United States, as follows:

(I) Two members who represent the public safety interests of the States.

(II) One member who represents State and local public safety employees.

(III) Two members who represent other interests of State and local governments, to be determined by the Chairman of the Commission.

(3) SELECTION OF NON-FEDERAL MEMBERS.—

(A) NOMINATION.—For each non-Federal member of the Board, the group that is represented by such member shall, by consensus, nominate an individual to serve as such member and submit the name of the nominee to the Chairman of the Commission.

(B) APPOINTMENT.—The Chairman of the Commission shall appoint the non-Federal members of the Board from the nominations submitted under subparagraph (A). If a group fails to reach consensus on a nominee or to submit a nomination for a member that represents such group[, or if the nominee is not qualified under subparagraph (C)], the Chairman shall select a member to represent such group.

(C) QUALIFICATIONS.—Each non-Federal member appointed under subparagraph (B) shall meet at least 1 of the following criteria:

(i) PUBLIC SAFETY EXPERIENCE.—Knowledge of and experience in Federal, State, local, or tribal public safety or emergency response.

(ii) TECHNICAL EXPERTISE.—Technical expertise and fluency regarding broadband communications, including public safety communications.

(iii) NETWORK EXPERTISE.—Expertise in building, deploying, and operating commercial telecommunications networks.

(iv) FINANCIAL EXPERTISE.—Expertise in financing and funding telecommunications networks.

(4) ANNUAL MEETINGS.—In addition to any other meetings necessary to carry out the duties of the Board under this section, the Board shall meet annually to consider the most recent report submitted by the Administrator under section 203(f)(1).

(5) RESOURCES.—The Commission shall provide the Board with the staff, administrative support, and facilities necessary to carry out the duties of the Board under this section.

(6) NO COMPENSATION OF BOARD MEMBERS.—The members of the Board may not receive any compensation for service on the Board.

(7) FEDERAL ADVISORY COMMITTEE ACT INAPPLICABLE.—The Federal Advisory Committee Act (5 U.S.C. App.) shall not apply to the Board.

(b) DEVELOPMENT OF PLAN BY BOARD.—

(1) IN GENERAL.—Not later than 18 months after the date on which the Board is established under subsection (a)(1), the Board shall submit to

the Commission a detailed proposal for a National Public Safety Communications Plan to govern the use of the public safety spectrum by States in order to meet long-term public safety communications needs.

(2) LIMITATION ON RECOMMENDATIONS.—The Board may not make any recommendations for requirements generally applicable to providers of commercial mobile service or private mobile service (as such terms are defined in section 332 of the Communications Act of 1934 (47 U.S.C. 332)).

(c) ADOPTION OF PLAN BY COMMISSION.—Not later than [__________] after the date of the submission of the proposal by the Board under subsection (b)(1), the Commission shall complete a single proceeding to adopt a plan based on such proposal, with such modifications as the Commission considers appropriate, to be known as the National Public Safety Communications Plan.

(d) PUBLIC SAFETY COMMUNICATIONS PRINCIPLES.—The proposal submitted by the Board under subsection (b)(1) and the Plan adopted by the Commission under subsection (c) shall be based on the following principles:

(1) Not later than 10 years after the date of the enactment of this Act, the public safety spec-

trum shall be used exclusively for broadband communications.

(2) Each State public safety broadband communications network shall conform to—

(A) standards used by providers of commercial mobile broadband service, in order to leverage the innovation and economies of scale in commercial markets;

(B) standards that ensure the safety, security, and resiliency of the network, including standards for protecting and monitoring the network to protect against cyberattack; and

(C) national interoperability requirements, including requirements that the equipment used to provide and access service on the network be—

(i) built to open standards;

(ii) capable of being used on every other such network; and

(iii) backward-compatible with second and third generation commercial networks for a period of not less than 5 years after the date of the adoption of the Plan by the Commission under subsection (c).

(3) Each State public safety broadband communications network shall be integrated with public safety answering points or the equivalent of public safety answering points.

(4) Each State shall include in requests for proposals for the construction and operation of the State public safety broadband communications network of such State—

(A) specifications for the construction and deployment of such network, including—

(i) build timetables, which shall take into consideration the time needed to build out to rural areas;

(ii) required coverage areas, including rural and nonurban areas;

(iii) minimum service levels; and

(iv) specific performance criteria;

(B) the technical and operational requirements for such network;

(C) the practices, procedures, and standards for the management and operation of such network;

(D) the terms of service for the use of such network; and

(E) specifications for ongoing compliance review and monitoring of—

(i) the management and operation of such network;

(ii) the practices and procedures of the entities operating on such network; and

(iii) the necessary training needs of network users.

(5) The infrastructure of a State public safety broadband communications network shall, where practicable and efficient, be co-located with the infrastructure of commercial mobile broadband service networks and other public safety communications networks.

(6) The equipment used to provide and access service on a State public safety broadband communications network may not be obtained through sole-source contracts.

(7) A State public safety broadband communications network shall be well-maintained and upgraded to take into account new and evolving technologies.

(8) In establishing and operating a State public safety broadband communications network, a State shall use, to the maximum extent practicable, public-

private partnerships between the State and providers of commercial mobile broadband service.

SEC. 203. PLAN ADMINISTRATION.

(a) SELECTION OF ADMINISTRATOR.—

(1) IN GENERAL.—The Commission shall, through an open, transparent request-for-proposals process, select an entity to serve as the Administrator of the Plan. The Commission shall commence such process not later than [________] after the date of the adoption of the Plan under section 202(c).

[(2) REPLACEMENT.—If an entity ceases to serve as Administrator under a contract awarded under paragraph (1) or this paragraph, the Commission shall, through an open, transparent request-for-proposals process, award another contract for service as Administrator.]

(b) POWERS AND DUTIES OF ADMINISTRATOR.—The Administrator shall—

(1) oversee the implementation of the Plan and the construction and operation of the State public safety broadband communications networks under contracts entered into by the States in accordance with the Plan, and in the case of a State receiving a grant under section 204, in accordance with the

State plan approved under subsection (b)(2) of such section;

(2) set standards for requests for proposals to be used by States in procuring services and equipment for the construction and operation of the State public safety broadband communications networks, including measures to ensure that costs incurred by the States are reasonable;

(3) review and approve or disapprove each contract entered into by a State for the construction or operation of a State public safety broadband communications network;

(4) review and approve or disapprove the State plans submitted under section 204(b)(1);

(5) take such actions as are necessary to link the State public safety broadband communications networks together into a national network of networks; and

(6) conduct such audits as are necessary to ensure—

(A) with respect to contracts described in paragraph (3), the integrity of the contracting process and the adequate performance of such contracts; and

[(B) that the State public safety broadband communications networks are constructed and operated in accordance with the Plan, and in the case of a State receiving a grant under section 204, in accordance with the State plan approved under subsection (b)(2) of such section]

(c) APPEAL TO COMMISSION.—

(1) IN GENERAL.—A decision of the Administrator may be appealed to the Commission in accordance with regulations to be established by the Commission.

(2) NO DELEGATION.—The Commission may not delegate the review of or the decision on an appeal under this subsection.

(d) ROLE OF THE STATES.—

(1) IN GENERAL.—Each State shall be responsible for contracting for the construction and operation, in accordance with the Plan and with the requirements included in the license of the State to use the public safety spectrum, of a State public safety broadband communications network.

(2) ACTIVITIES SUBJECT TO APPROVAL OF ADMINISTRATOR.—The activities of a State in contracting for the construction and operation of a

State public safety broadband communications network shall be subject to the approval of the Administrator.

(e) AUDITS OF USE OF FEDERAL FUNDS BY ADMINISTRATOR.—Not later than 1 year after entering into a contract to serve as Administrator, and annually thereafter, the Administrator shall provide to the Commission a statement, audited by an independent auditor, that details the use during the preceding fiscal year of [any Federal funds received by the Administrator in connection with its service as Administrator].

(f) ANNUAL REPORT BY ADMINISTRATOR.—

(1) IN GENERAL.—Not later than 1 year after entering into a contract to serve as Administrator, and annually thereafter, the Administrator shall submit a report covering the preceding fiscal year to—

(A) the Committee on Energy and Commerce of the House of Representatives and the Committee on Commerce, Science, and Transportation of the Senate; and

(B) the Board.

(2) REQUIRED CONTENT.—The report required by paragraph (1) shall include—

(A) a comprehensive and detailed description of—

(i) progress on the construction of the State public safety broadband communications networks;

(ii) the activities of the Administrator in its capacity as Administrator; and

(iii) the financial condition of the Administrator; and

(B) such recommendations or proposals for legislative or administrative action as the Administrator considers appropriate.

SEC. 204. GRANTS TO STATES.

(a) ESTABLISHMENT.—Subject to the availability of appropriations, the Commission shall make grants to States for contracting for the construction and operation of State public safety broadband communications networks.

(b) APPLICATION.—The Commission may only make a grant under this section to a State—

(1) that submits an application at such time, in such form, and containing such information and assurances as the Commission may require, including a State plan developed in accordance with subsection (c); and

(2) the State plan of which is approved by the Administrator.

(c) STATE PLAN.—A State wishing to receive a grant under this section shall develop a State plan for the development of a State public safety broadband communications network in accordance with the National Public Safety Communications Plan and the terms of the license of the State to use the public safety spectrum.

(d) USE OF FUNDS.—

(1) IN GENERAL.—A State receiving a grant under this section shall use the grant funds to contract for the construction and operation of a State public safety broadband communications network in accordance with the State plan approved by the Administrator under subsection (b)(2).

(2) APPROVAL OF CONTRACTS.—A State may not use grant funds received under this section for payments under a contract unless such contract has been approved by the Administrator.

(e) ADMINISTRATION BY NTIA.—The Commission and the NTIA **[**may**]** enter into an agreement for the NTIA to administer this section**[**, without reimbursement**]** **[**and subject to the approval of the Commission**]**.

(f) AUTHORIZATION OF APPROPRIATIONS.—There is authorized to be appropriated to the Commission to carry out this section **[**for fiscal years ____________**]**/**[**, to remain available until expended,**]** **[**$______________**]** from the Public Safety Broadband Communications Implementation Fund established by subsection (g)(1).

(g) PUBLIC SAFETY BROADBAND COMMUNICATIONS IMPLEMENTATION FUND.—

(1) ESTABLISHMENT.—There is established in the Treasury of the United States a fund to be known as the Public Safety Broadband Communications Implementation Fund.

(2) TRANSFER OF UNUSED FUNDS.—If there is a balance remaining in the Public Safety Broadband Communications Implementation Fund on [______________], the Secretary of the Treasury shall transfer such balance to the general fund of the Treasury of the United States, where such balance shall be dedicated for the sole purpose of deficit reduction.

SEC. 205. WIRELESS FACILITIES DEPLOYMENT.

(a) FACILITY MODIFICATIONS.—

(1) IN GENERAL.—Notwithstanding section 704 of the Telecommunications Act of 1996 (Public Law 104–104) or any other provision of law, a State or local government may not deny, and shall approve, any eligible facilities request for a modification of an existing wireless tower that does not substantially change the physical dimensions of such tower.

(2) ELIGIBLE FACILITIES REQUEST.—For purposes this subsection, the term ''eligible facilities request'' means any request for modification of an existing wireless tower that involves—

(A) collocation of new transmission equipment;

(B) removal of transmission equipment; [and]/[or]

(C) replacement of transmission equipment.

(b) FEDERAL EASEMENTS AND RIGHTS-OF-WAY.—

(1) GRANT.—If an executive agency, a State, a political subdivision or agency of a State, or a person, firm, or organization applies for the grant of an easement or right-of-way to, in, over, or on a building [or other property] owned by the Federal Government for the right to install, construct, and maintain wireless service antenna structures and equipment, and backhaul transmission [equipment], the executive agency [having control of]/[occupying] the building [or other property] may grant to the applicant, on behalf of the Federal Government, an easement or right-of-way to perform such installation, construction, and maintenance.

(2) APPLICATION.—The Administrator of General Services shall develop a common form for applications for ⟦easements and⟧ rights-of-way under paragraph (1) for all executive agencies that shall be used by applicants with respect to the buildings or other property of each such agency.

(3) FEE.—

(A) IN GENERAL.—Notwithstanding any other provision of law, the Administrator of General Services shall establish a fee for the grant of an easement or right-of-way pursuant to paragraph (1) that is based on direct cost recovery.

(B) EXCEPTIONS.—The Administrator of General Services may establish exceptions to the fee amount required under subparagraph (A)—

(i) in consideration of the public benefit provided by a grant of an easement or right-of-way; and

(ii) in the interest of expanding wireless and broadband coverage.

(4) USE OF FEES COLLECTED.—Any fee amounts collected by an executive agency pursuant to paragraph (3) shall be made available, without

further appropriation, to such agency for the telecommunications and information technology needs of such agency. Any excess funds shall be deposited in the Federal Buildings Fund established under section 592 of title 40, United States Code.

(c) MASTER CONTRACTS FOR WIRELESS TOWER SITINGS.—

(1) IN GENERAL.—Notwithstanding section 704 of the Telecommunications Act of 1996 or any other provision of law, and not later than 60 days after the date of enactment of this Act, the Administrator of General Services shall—

(A) develop 1 or more master contracts that shall govern the placement of wireless service antenna structures on buildings and other property owned by the Federal Government; and

(B) in developing the master contract or contracts, standardize the treatment of the placement of wireless service antenna structures on building rooftops or facades, the placement of [wireless service antenna] equipment on rooftops or inside buildings, [the] technology [used in connection with wireless service antenna structures or equipment placed on Federal buildings and other property], and any other key issues the Administrator considers appropriate.

(2) APPLICABILITY.—The master contract or contracts developed by the Administrator of General Services under paragraph (1) shall apply to all publicly accessible buildings and other property owned by the Federal Government, unless the Administrator decides that issues with respect to the siting of a wireless service antenna structure on a specific building or other property warrant nonstandard treatment of such building or other property.

(3) APPLICATION.—The Administrator of General Services shall develop a common form or set of forms for wireless service antenna structure siting applications under this subsection for all executive agencies that shall be used by applicants with respect to the buildings [and other property] of each such agency.

(d) EXECUTIVE AGENCY DEFINED.—In this section, the term "executive agency" has the meaning given such term in section 102 of title 40, United States Code.

SEC. 206. STUDY ON EMERGENCY COMMUNICATIONS BY AMATEUR RADIO AND IMPEDIMENTS TO AMATEUR RADIO COMMUNICATIONS.

(a) IN GENERAL.—Not later than 180 days after the date of the enactment of this Act, the Commission, in consultation with the Office of Emergency Communications in the Department of Homeland Security, shall—

(1) complete a study on the uses and capabilities of amateur radio service communications in emergencies and disaster relief; and

(2) submit to Congress a report on the findings of such study.

(b) CONTENTS.—The study required by subsection (a) shall include—

(1)(A) a review of the importance of emergency amateur radio service communications to homeland security missions relating to disasters, severe weather, and other threats to lives and property in the United States; and

(B) recommendations for—

(i) enhancements in the voluntary deployment of amateur radio operators in disaster and emergency communications and disaster relief efforts; and

(ii) improved integration of amateur radio operators in the planning and furtherance of initiatives of the Department of Homeland Security; and

(2)(A) an identification of impediments to enhanced amateur radio service communications, such as the effects of unreasonable or unnecessary private land use restrictions on residential antenna installations; and

(B) recommendations regarding the removal of such impediments for consideration by other Federal departments and agencies and by Congress.

(c) EXPERTISE.—In conducting the study required by subsection (a), the Commission shall use the expertise of stakeholder entities and organizations, including the amateur radio, emergency response, and disaster communications communities.

National Security Preparedness Group

Foreword

We serve as co-chairs of the Bipartisan Policy Center's National Security Preparedness Group (NSPG), which is a follow-on to the 9/11 Commission. NSPG monitors the implementation of the 9/11 Commission's recommendations and focuses on emerging security threats to our nation.

Ten eventful years have now passed since violent Islamist extremists, members of the terrorist organization al Qaeda, hijacked four commercial airplanes and flew them into the twin towers of the World Trade Center in New York City, the Pentagon in Washington, D.C., and a field in Pennsylvania. These horrific attacks killed nearly 3,000 of our fellow Americans and citizens of foreign countries, altering our society forever.

Over the course of nearly 20 months, the 9/11 Commission investigated the facts and circumstances surrounding the attacks. The 9/11 Commission Report, issued in July 2004, made 41 recommendations for keeping our country safe. These recommendations were endorsed by both presidential candidates at the time and almost every member of Congress.

We have reflected often on why the 9/11 Commission was successful. First, because of the great damage and trauma the 9/11 attacks produced, the American public demanded action and had high expectations for measures and reforms that would improve the nation's security. Importantly, the statutory mandate for the Commission was limited, precise, and clear – the Commission was authorized to investigate the facts and circumstances surrounding the attacks and to make recommendations to keep the country safe; the Commission had an extraordinary non-partisan staff, the members of which possessed deep expertise and conducted their work with thoroughness and professionalism; the Commissioners had deep experience in government and political credibility with different constituencies; the final report was unanimous and bipartisan; families of the victims of 9/11 provided solid and sophisticated support throughout the life of the Commission and in the years since; and following the Commission, the Commissioners and staff continue to work closely with Congress and the executive branch to implement and monitor reform.

The success of the Commission's work was due to political leadership embracing its findings and recommendations, pushing hard to enact them, and continuing to drive reform. That support and leadership have been critical in improving the nation's security.

Now, on the solemn occasion of the 10th anniversary of the attacks, is an appropriate time to reflect and evaluate where we are in national security reform – and what we have yet to achieve.

Sincerely,

Tom Kean

Lee Hamilton

Chapter 1: Introduction

Effect of the 9/11 Attacks

The terrorist attacks of September 11, 2001 exacted a devastating toll on so many of our families, profoundly and dramatically transforming government, the private sector, and our daily lives. The suddenness of the attacks on American soil and the loss of so many lives made us feel vulnerable in our homes, and caused us to question whether our government was properly organized to protect us from this lethal threat. The economic damage resulting from the attacks was severe. In short order, we shifted from a "peace dividend" at the end of the Cold War to massive expenditures of taxpayer dollars on new security measures.

The human tragedy was, of course, the greatest loss. Nothing can replace the loved ones lost to that act of terrorism. But the consequences for our economy and the private sector have been striking. More than 80 percent of our nation's critical infrastructure is owned by the private sector, and protecting it from terrorist operations has become an urgent priority. Working together, the government and private sector have improved their information sharing and, therefore, our security posture.

Businesses in all sectors have adapted to this new reality. They have focused on how best to protect personnel as well as food and water supplies; they have developed continuity plans to prepare for possible disruptions; and they have adopted innovative safety features into building construction. U.S. importers, working with the Department of Homeland Security, have pioneered new ways to ensure the integrity of shipping containers that bring goods into the country. The insurance industry's risk analysis has evolved to reflect new realities. These necessary innovations have increased the costs of doing business, and future innovations may raise costs even higher.

The Government's Response

Over the past 10 years, our government's response to the challenge of transnational terrorism has been dramatic. At the federal level, we have created major new institutions. The Department of Homeland Security itself was a massive reconfiguration of government, combining 22 agencies into a new department, with a workforce of 230,000 people and an annual budget of more than $50 billion. In total, some 263 organizations have been established or redesigned.

The intelligence community has also adapted. In response to the recommendations of the 9/11 Commission, Congress created the Office of the Director of National Intelligence (DNI) and the National Counterterrorism Center in 2004 to advance a unified effort across the intelligence community. Four DNIs in six years have worked with the Intelligence Community (IC), sometimes with difficulty, to establish appropriate and effective roles and responsibilities. Today, key IC relationships in the new order appear to be improving and moving in a constructive direction.

At the same time, the intelligence budget has surged to more than $80 billion – more than double what was spent in 2001. And throughout the national security community, a flexible and resilient workforce has been trained to protect the American people in a new environment. The FBI, CIA, and the broader intelligence community have implemented significant reforms, disrupting many plots and bringing to justice many terrorist operatives.

Despite this considerable progress, some major 9/11 Commission recommendations remain unfulfilled, leaving the U.S. not as safe as we could or should be. These unfulfilled recommendations require urgent attention because the threat from al Qaeda, related terrorist groups, and individual adherents to violent Islamist extremism persists. In late July, a U.S. soldier was arrested on suspicion of plotting to murder U.S. soldiers at Fort Hood, Texas. Other brands of extremism are also highly lethal and threaten all of us, as the recent events in Norway so painfully remind us.

Evolving Terrorist Threat to the U.S.

Former CIA Director and current Secretary of Defense, Leon Panetta, declared that we are "within reach of strategically defeating al Qaeda." Only the future will tell whether that is accurate, but certainly the death of Osama bin Laden is our most significant advancement to date in our efforts to defeat al Qaeda.

The bin Laden raid resulted from years of hard work, cooperation, vigilance, and tenacity. It involved surveillance, the analysis of many bits of information, and seamless interaction between the CIA and the military. Bin Laden's capture reflected the highest level of collaboration among IC agencies and the military.

Although Osama bin Laden is dead, al Qaeda is not; it is a network, not a hierarchy. Over a period of years, al Qaeda has been very adaptive and resilient. Al Qaeda and its affiliates will almost certainly attempt to avenge his death, however, they will not necessarily attack soon.

Al Qaeda's capabilities to implement large-scale attacks are less formidable than they were 10 years ago, but al Qaeda and its affiliates continue to have the intent and reach to kill dozens, or even hundreds, of Americans in a single attack.

Al Qaeda has been marked by rapid decentralization. The most significant threats to American national security come from affiliates of core al Qaeda, such as al Qaeda in the Arabian Peninsula where U.S.-born Anwar al-Awlaki has played a prominent role. Al Qaeda's influence is also on the rise in South Asia and continues to extend into failing or failed states such as Yemen and Somalia.

In assessing terrorist threats to the American homeland, senior U.S. counterterrorism officials now call attention to al Qaeda's strategy of "diversification" – attacks mounted by a wide variety of perpetrators of different national and ethnic backgrounds that cannot easily be "profiled" as threats.

Most troubling, we have seen a pattern of increasing terrorist recruitment of American citizens and residents to act as "lone wolves." In 2009, there were two actual terrorist attacks on our soil. The Fort Hood shooting claimed the lives of 13 people, and a U.S. military recruiter was killed in Little Rock, Arkansas. Today, we know that Americans are playing increasingly prominent roles in al Qaeda's movement. Muslim-American youth are being recruited in Somali communities in Minneapolis and Portland, Oregon, in some respects moving the front lines to the interior of our country.

Alarmingly, we have discovered that individuals in the U.S. are engaging in "self-radicalization." This process is often influenced by blogs and other online content advocating violent Islamist extremism. While there are methods to monitor some of this activity, it is simply impossible to know the inner thinking of every at-risk person. Thus, self-radicalization poses a serious emerging threat in the U.S.

Because al Qaeda and its affiliates will not give up, we cannot let our guard down. Our terrorist adversaries and the tactics and techniques they employ are evolving rapidly. We will see new attempts, and likely successful attacks.

Our enemy continues to probe our vulnerabilities and design innovative ways to attack us. Such innovation is best exemplified by the discovery in October 2010 of explosives packed in toner cartridges addressed to synagogues in Chicago and shipped on Fed Ex and UPS cargo flights from Yemen. This plot constituted an assault on our international transportation and commerce delivery systems and it was committed without the terrorists ever having to set foot within the U.S. Although the plot failed, terrorists will not abandon efforts to develop new ways to inflict great harm on us.

Another way that terrorists can attack without ever physically crossing our borders is through a cyber attack. Successive DNIs have warned that the cyber threat to critical infrastructure systems – to electrical, financial, water, energy, food supply, military, and telecommunications networks – is grave. Earlier this month, senior DHS officials described a “nightmare scenario” of a terrorist group hacking into U.S. computer systems and disrupting our electric grid, shutting down power to large swathes of the country, perhaps for a period as long as several weeks. As the current crisis in Japan demonstrates, disruption of power grids and basic infrastructure can have devastating effects on society.

This is not science fiction. It is possible to take down cyber systems and trigger cascading disruptions and damage. Defending the U.S. against such attacks must be an urgent priority.

All of these continued and nascent threats mean that we must not become complacent, but remain vigilant and resolute. We have significantly improved our security since 9/11, but the work is not complete. We should begin by tackling the unfinished recommendations of the 9/11 Commission.

This is not science fiction. It is possible to take down cyber systems and trigger cascading disruptions and damage. Defending the U.S. against such attacks must be an urgent priority.

National Security Preparedness Group

Chapter 2: Nine Major Unfinished 9/11 Commission Recommendations

To be sure, substantial progress has been made in fulfilling many of the 9/11 Commission's 41 recommendations. Dedicated men and women in government and private sector should be credited for their tireless efforts and accomplishments in improving our national security during the last decade. This report does not chronicle all of their successes here, but highlights the transformation of the intelligence community and improvements to screening airline passengers.

Success Highlights

Intelligence Community Transformation

Legal, policy, and cultural barriers between agencies created serious impediments to information sharing that prevented disruption of the 9/11 attacks. Therefore, the 9/11 Commission made a number of specific recommendations to improve information sharing across our government. Information sharing within the federal government, and among federal, state, local authorities, and with allies, while not perfect, has considerably improved since 9/11.

Progress among national agencies, and between the IC and the military in the field, has been striking. The degree of interagency collaboration in Afghanistan and Iraq is unprecedented. On the domestic side, however, there has been less unity of effort and much slower progress among multiple agencies that are either new or have new counterterrorism missions.

The level of cooperation among all levels of government is higher than ever. There are now 105 Joint Terrorism Task Forces throughout the nation, and 72 Fusion Centers in which federal, state, local authorities investigate terrorism leads and share information. State and local officials have a far greater understanding not only of threats and how to respond to them, but also of their communities and those who may be at risk of radicalization.

The FBI has gone through dramatic change and continues to transform from an agency overwhelmingly focused on law enforcement to one that prioritizes preventing terrorism. This is a significant cultural change that can be furthered by placing the status of intelligence analysts on par with special agents, who have traditionally risen to management at the Bureau.

The CIA has improved its intelligence analysis and removed barriers between its analysts and operations officers. Recruiting well-placed sources, however, remains difficult and the CIA has had difficulty recruiting qualified officers with necessary language skills.

Airline Passenger Screening

On September 11, 2001, 19 terrorists turned airplanes into weapons. Some of those hijackers were flagged for additional screening, but the follow-up was lackluster. Others would have been flagged had better information sharing been in place. Along with information sharing improvements, the procedures for identifying airline passengers who should be prevented from boarding an airplane, or be subjected to additional screening, have been greatly enhanced.

The Transportation Security Administration (TSA) now screens the names of all airline passengers against the “no fly” and “automatic selectee” terrorist watchlists before they board an airplane. This is known as the Secure Flight program. Until last year, the airlines had the responsibility of comparing passengers against these watchlists, but that process resulted in numerous errors in missing individuals on the no fly list as well as incorrectly identifying passengers as being the particular individual on the list. It also placed sensitive information in the hands of far too many people, including officials at foreign government-owned airlines. This is an important improvement to our security.

A decade after 9/11, the nation is not yet prepared for a truly catastrophic disaster.

Unity of Command and Effort

Recommendation: "Emergency response agencies nationwide should adopt the Incident Command System (ICS). When multiple agencies or multiple jurisdictions are involved, they should adopt a unified command. Both are proven frameworks for emergency response. Regular joint training at all levels is … essential to ensuring close coordination during an actual incident."

The 9/11 attacks demonstrated that robust and well-rehearsed emergency response capabilities can be overwhelmed by a significant terrorist attack. In 2005, Hurricane Katrina revealed that a catastrophic natural disaster could produce a chaotic and disorganized response by all levels of government, causing large-scale human suffering. A decade after 9/11, the nation is not yet prepared for a truly catastrophic disaster.

Teamwork, collaboration, and cooperation at an incident site are critical to a successful response, and can save many lives in the face of massive casualties. We therefore recommended that federal, state, and local emergency response agencies nationwide adopt the Incident Command System (ICS); an essential element of this is a unified command with one person in charge of directing the efforts of multiple agencies. This overall commander, we believed, would be best suited to advance the goal of unity of effort.

Following 9/11, DHS incorporated ICS into the National Incident Management System (NIMS). NIMS provides nationwide guidance to clarify the roles of federal, state, and local governments, non-profit organizations, and the private sector in protecting against, responding to, and recovering from disasters, and it is an essential part of the National Response Framework. DHS has trained first responders throughout the country in the operation of NIMS.

All levels of government have concentrated on planning and exercising for disaster response to an extent rarely seen before the 9/11 attacks. Over the last several years, the federal government has coordinated massive National Level Exercises (NLE), knitting together agencies across the country and around the world. The purpose of the congressionally-mandated, DHS-managed NLE is to prepare and coordinate a multiple-jurisdictional, integrated response to a national catastrophic event. The NLE 2011 scenario took place in May and involved thousands of players representing federal, state, and local agencies at 50 sites across the country. Dozens of foreign countries participated and the private sector played a prominent role in the exercise.

While this represents important progress, the nation's ability to establish unity of command and effort were put to the test during the 2010 Gulf Coast oil spill. The goal was to provide a unified, coordinated response under the leadership of DHS, with the Coast Guard as lead agency and British Petroleum as the responsible party. The response was divided into four main categories of effort: command, planning, operations, and logistics. This structure allowed each team to grow rapidly as more people arrived to respond to the spill; tens of thousands were ultimately involved.

Management of the crisis was an improvement over the often seriously fragmented approaches taken in response to previous disasters but the response was not without flaws. The Coast Guard Commandant was placed in overall command of the incident, but state and local officials, responding to political pressures, at times focused their efforts on what they judged to be priorities for their constituents. State and local authorities set up their own local command centers and were often at odds with the overall plan for strategic response and clean up, creating resource demands in conflict with the overarching program. The complexity of the problem highlights the difficulty of establishing strong central command and control, and integrating incident response across all levels of government.

Progress continues to be made on unity of effort, but it is far from complete. In order to ensure unity of effort, there

Our discussions with community leaders and first responders indicate that many metropolitan areas, with multiple agencies responding to a disaster, still have not solved the problem of a unified command structure.

must be comprehensive planning across federal agencies and with state and local authorities. The Department of Homeland Security's Inspector General found that the federal government had not adequately developed catastrophic disaster operations plans to address "specific roles, responsibilities, and actions for each federal department and agency responding to an incident." Without sufficient planning by the federal government to determine appropriate agency roles and responsibilities, it is impossible for state and local governments to develop operational plans that sync up with the federal government's plans. As a result, at the site of a catastrophic disaster there could be confusion about who is responsible for which actions, particularly between the federal government and state and local governments.

In 2008, the Federal Emergency Management Agency (FEMA) implemented a pilot program in five states to integrate state and federal catastrophic planning efforts. The program helped the states fill gaps in catastrophic planning and build relationships with FEMA, other states, local governments, and the private sector. However, an April 2011 report by the Government Accountability Office (GAO), found continuing gaps in catastrophic planning in these states. Some states lacked a section on "direction, control, and coordination" in their catastrophic incident plans, and one state estimated that it would take five years before it could complete its catastrophic incident plan. The GAO also found that states had not exercised their catastrophic operational plans to determine effectiveness or clarify change of command. These planning and exercises are essential elements of establishing unity of effort before a disaster strikes.

While the FEMA pilot program that GAO reviewed has been discontinued, states may use grant funding for catastrophic planning. Federal support in the form of grants and direct technical assistance for planning has repeatedly been cited by states and major urban areas as critical and should be a continued focus area for limited federal preparedness resources.

The executive branch also must ensure that all federal departments and agencies relevant to disaster mitigation and response be involved in disaster planning. Just this year, the administration adopted a major course change to its government-wide approach to catastrophic disaster planning. In March 2011, the president issued a revised directive on disaster preparedness that requires all federal departments and agencies with disaster-response capabilities to develop operational plans in support of interagency planning frameworks. The directive tasks DHS with the responsibility for revising the national preparedness system, in coordination with other federal agencies and all levels of government, in order to provide new guidance "for planning, organization, equipment, training, and exercises to build and maintain domestic capabilities." As this guidance is released, all levels of government will need to redouble their engagement in planning and exercises to ensure unity of effort.

In addition to the practical implementation of establishing unity of effort planning and exercises, there remain political challenges. Our discussions with community leaders and first responders indicate that many metropolitan areas, with multiple agencies responding to a disaster, still have not solved the problem of a unified command structure. This is a political problem that in most cases must be addressed by state and local government.

While the government has made substantial progress, our recommendation is still a long way from being fully implemented.

Despite the lives at stake, the recommendation to improve radio interoperability for first responders has stalled because of a political fight over whether to allocate 10 MHz of radio spectrum – the D-block – directly to public safety for a nationwide network.

Radio Spectrum and Interoperability

Recommendation: "Congress should support pending legislation which provides for the expedited and increased assignment of radio spectrum for public safety purposes."

The inability of first responders to communicate with each other on demand was a critical failure on 9/11. Incompatible and inadequate communications led to needless loss of life. To remedy this failure, the Commission recommended legislation to provide for the expedited and increased assignment of radio spectrum for public safety purposes.

To date, this recommendation continues to languish. Despite the lives at stake, the recommendation to improve radio interoperability for first responders has stalled because of a political fight over whether to allocate 10 MHz of radio spectrum – the D-block – directly to public safety for a nationwide network, or auction it off to a commercial wireless bidder who would then be required to provide priority access on its network dedicated to public safety during emergencies.

Since 9/11, faltering advances were made as some radio spectrum in the 700 MHz band were allocated to public safety, but it remains largely unused by first responders. The overwhelming majority of our nation's police chiefs and leaders of first responder agencies support the allocation of the D-block to the existing dedicated public safety spectrum in order to construct a nationwide, interoperable public safety broadband network. This network would allow diverse public safety agencies to communicate with each other, and support mission critical voice, video, text, and other data transmissions.

In his February 2011 State of the Union address, President Obama called for allocating the D-block spectrum to public safety. He also supports allocating $7 billion in federal funding to support a build-out of the broadband network for cash-strapped localities and rural communities. The U.S. Senate Commerce Committee voted in June to report legislation to the full Senate that would allocate this spectrum to public safety, but this bill has not passed the Senate and the House has not yet considered similar legislation.

We support the immediate allocation of the D-block spectrum to public safety and the construction of a nationwide, interoperable broadband network. Because we don't know when the next attack or disaster will strike, we urge the Congress to act swiftly.

Following the allocation of spectrum for public safety use, heavy lifting is needed to deploy an operational nationwide interoperable network. Standards must be established for the public safety broadband network to ensure nationwide interoperability of wireless devices on the network. In addition, wireless devices that operate on the public safety broadband network should be interoperable with devices on other portions of spectrum. This interoperability is important so that a first responder's public safety network device could also operate on a commercial wireless network if the public safety broadband network transmitter is disrupted, or a first responder moves into an area where the public safety broadband network transmitters have not been deployed, as is likely to be the case in many rural areas.

The public safety broadband network and devices must be integrated with existing narrowband emergency communications technology, procedures, and interoperability plans. To save money, where possible, the public safety broadband network deployment should leverage existing communications infrastructure the federal government has already procured, such as Department of Justice's Integrated Wireless Network or Customs and Border Protection's (CBP) Tactical Communications System, and the radio towers that state and local governments have constructed or leased. For example, CBP's radio towers provide an existing infrastructure base for communications in remote rural areas where there is no other existing communications infrastructure.

The 9/11 Commission recommended creating a Privacy and Civil Liberties Oversight Board to monitor actions across the government. Congress and the president enacted legislation to establish this Board but it has, in fact, been dormant for more than three years.

Finally, the public safety broadband network construction process should be managed carefully to avoid cost overruns and ensure that taxpayers get the most value for their dollars. Rigorous oversight by Congress and the administration is needed to monitor progress in establishing the network.

Challenges to the interoperability of other first responder communications networks also require greater attention. Statewide communications interoperability plans and the creation of a national emergency communications plan have advanced emergency coordination across jurisdictions. In addition, DHS has worked with 60 urban areas to successfully demonstrate emergency communications among primary operational leadership, allowing them to manage resources and make timely decisions – within one hour of a routine incident involving multiple agencies.

While this represents progress, taking one hour to establish emergency communications between agency leadership should not be the final goal. That would still be inadequate for an attack on the scale of 9/11, resulting in loss of life. In particular, first responders, not just leadership, need to have the ability to communicate with one another immediately during a disaster.

Across urban areas, regions, and states, coordination and planning must be improved in the areas of technology deployment, standard operating procedures, training, and exercises. Several grant programs at different federal agencies can be used to enhance interoperability, but further efforts are needed to ensure the most effective use of these grants on the highest priority projects, especially with deployment of the public safety broadband network. While expanding the spectrum and resources available to first responders is critical to improving interoperability, these additional issues must be addressed to achieve real-time interoperable communications for catastrophic disasters.

Civil Liberties and Executive Power

Recommendation: "[T]here should be a board within the executive branch to oversee adherence to the [privacy] guidelines we recommend and the commitment the government makes to defend our civil liberties."

An array of security-related policies and programs present significant privacy and civil liberty concerns. In particular, as the FBI and the rest of the intelligence community have dramatically expanded their surveillance of potential terrorists, they have used tools such as National Security Letters that may implicate the privacy of Americans. Privacy protections are also important in cyber security where the government must work with the private sector to prevent attacks that could disrupt information technology systems and critical infrastructure. The same Internet that contains private correspondence and personal information can also be used as a conduit for devastating cyber attacks.

To ensure that privacy and liberty concerns are addressed, the 9/11 Commission recommended creating a Privacy and Civil Liberties Oversight Board to monitor actions across the government. Congress and the president enacted legislation to establish this Board but it has, in fact, been dormant for more than three years.

The Obama administration recently nominated two members for the Board, but they have not yet been confirmed by the Senate. We take the administration at its word that this Board is important: in its May 2009 review of cyber security policy, the administration noted the Board's importance for evaluating cyber security policies. We urge the president to appoint individuals for the remaining three positions on the board, including the chairman, immediately, and for the Senate to evaluate their nominations expeditiously.

Despite the faltering progress on the Board, some agencies have established chief privacy officers. We commend

The rules governing congressional organization reflect the needs and economy of the 19th century, not the challenges of the 21st century.

the dedicated efforts of privacy officers in each of the respective agencies with national security responsibilities; they are doing their work with professionalism. In particular, assessments they have authored on the impact of policies, regulations, and directives issued by their respective departments on civil liberties have been strong.

If we were issuing grades, the implementation of this recommendation would receive a failing mark. A robust and visible Board can help reassure Americans that these programs are designed and executed with the preservation of our core values in mind. Board review can also give national security officials an extra degree of assurance that their efforts will not be perceived later as violating civil liberties.

Congressional Reform

Recommendation: "Congress should create a single, principal point of oversight and review for homeland security. Congressional oversight for intelligence – and counterterrorism – is now dysfunctional."

When we issued our 2004 report, we believed that congressional oversight of the homeland security and intelligence functions of government was dysfunctional. It still is. So long as oversight is governed by current congressional rules and resolutions, we believe the American people will not get the security they want and need. The rules governing congressional organization reflect the needs and economy of the 19th century, not the challenges of the 21st century.

We recommended that Congress create a single, principal point of oversight and review for homeland security. This has not been done. The homeland security committees in the House and Senate do not have sufficient jurisdiction over important agencies within the Department of Homeland Security. Instead, jurisdiction has been carved up to accommodate antiquated committee structures. As a result, too many committees have concurrent and overlapping jurisdiction. This is a recipe for confusion.

This is not just a theoretical problem; it has already produced unclear security policies. The Senate Commerce Committee has jurisdiction over the TSA and has used this authority to set security standards for screening cargo shipped from abroad on airplanes. But cargo shipped on maritime vessels is governed by the security policies of U.S. Customs and Border Protection (CBP), which falls under the jurisdiction of the Senate Homeland Security Committee. Those CBP policies were significantly enhanced by the SAFE Port Act of 2006 in legislation that the Homeland Security Committee produced. The security of cargo should not depend on whether it moves by air or sea and the committee that has jurisdiction over the agency that regulates that method of transit. Both TSA and CBP are part of the Department of Homeland Security and oversight should be with the Senate Homeland Security Committee.

The unwieldy jurisdictional divisions result in the inefficient allocation of limited resources needed to secure our nation. The Department of Homeland Security responds to the inquiries of more than 100 committees and subcommittees. In 2009 and 2010, DHS provided more than 3,900 briefings and DHS witnesses testified more than 285 times. This amounted to many thousands of hours of work, often duplicating efforts, and cost taxpayers tens of millions of dollars.

The result is that DHS receives conflicting guidance and Congress lacks one picture of how that enormous organization is functioning. Congress should be helping integrate the sprawling DHS; a fragmented oversight approach defeats that purpose.

We also recommended that Congress create a Joint Committee for Intelligence or create House and Senate committees with combined authorizing and appropriating powers. Agencies listen to the people who

It still is not clear, however, that the DNI is the driving force for intelligence community integration that we had envisioned.

control their purse, but appropriations for the CIA, for example, come under an already overburdened House Appropriations Subcommittee on Defense. The thrust of our recommendation is to ensure that there is credible, robust expert oversight of the intelligence community's funding and other activities. Our recommendation would ensure that the intelligence appropriations process is not an appendage to the massive defense budget. The House Permanent Select Committee on Intelligence announced a decision this year to include three Members of the House Appropriations Committee to participate in Intelligence Committee hearings and briefings. This is a positive step, but there is more to do here.

We firmly reinforce what we said in our final report: That it is in our country's security interest that Congress make committee reform a priority.

Director of National Intelligence

Recommendation: "The current position of Director of Central Intelligence should be replaced by a National Intelligence Director with two main areas of responsibility: (1) to oversee national intelligence centers on specific subjects of interest across the U.S. government and (2) to manage the national intelligence program and oversee the agencies that contribute to it."

As recommended by the 9/11 Commission, Congress created the position of Director of National Intelligence (DNI) as the principal intelligence advisor to the president, responsible for directing and coordinating the efforts of the 16 agencies of the intelligence community. In the six years since the creation of this post, the DNI has increased information sharing, improved coordination among agencies, sharpened collection priorities, brought additional expertise into the analysis of intelligence, and further integrated the FBI into the overall intelligence effort. These are significant achievements.

It still is not clear, however, that the DNI is the driving force for intelligence community integration that we had envisioned. Some ambiguity appears to remain with respect to the DNI's authority over budget and personnel. Strengthening the DNI's position in these areas would advance the unity of effort in intelligence, whether through legislation or with repeated declarations from the president that the DNI is the unequivocal leader of the intelligence community.

We are also concerned that there have been four DNIs in six years. Short tenures detract from the goals of building strong authority in the office and the confidence essential for the president to rely on the DNI as his chief intelligence advisor.

Transportation Security

Recommendation: "The TSA and the Congress must give priority attention to improving the ability of screening checkpoints to detect explosives on passengers. The TSA should expedite the installation of advanced (in-line) baggage-screening equipment."

While the TSA's implementation of airline passenger screening against the "no fly" and "automatic selectee" lists is a major success, we are still highly vulnerable to aviation security threats. We know that al Qaeda and its affiliates are committed to attacking U.S. aviation as evidenced by Umar Farouk Abdulmutallab's attempt to detonate an explosive on Northwest flight 253 in the skies over Detroit, as well as the insertion of bombs into printer cartridges shipped on airplanes from Yemen to the United States. We also know that Osama bin Laden aspired to attack U.S. rail transportation in New York.

We are not satisfied with improvements to TSA's explosives screening capability. With significant federal funding, TSA has deployed large numbers of enhanced screening

Despite 10 years of working on the problem, the aviation screening system still falls short in critical ways with respect to detection.

equipment used at passenger checkpoints and baggage check screening. Unfortunately, explosives detection technology lacks reliability and lags in its capability to automatically identify concealed weapons and explosives. The next generation of whole body scanning machines also are not effective at detecting explosives hidden within the body and raise privacy and health concerns that DHS has not fully addressed. Our conclusion is that despite 10 years of working on the problem, the aviation screening system still falls short in critical ways with respect to detection.

The Government Accountability Office (GAO) has cited flaws in the way that the TSA and the DHS Science and Technology Directorate conduct research, development, testing, and evaluation of new technology. GAO has found weaknesses in developing and articulating technology program requirements. Ill-defined requirements make it difficult for the private sector to design cost-effective screening equipment that meets DHS's needs. In addition, GAO faults TSA for not conducting and completing testing and evaluation of new technologies to ensure that they work in an operational environment, as well as not incorporating cost and benefit information while making technology acquisition decisions. As a result, significant amounts of money have been wasted and the GAO continues to identify serious holes in virtually every security layer. Given the threat we face to our transportation systems, we cannot afford to perpetuate these mistakes.

Biometric Entry-Exit Screening System

Recommendation: "The Department of Homeland Security, properly supported by the Congress, should complete, as quickly as possible, a biometric entry-exit screening system."

One area of great progress in securing our borders is the deployment of the biometric entry system known as US-VISIT. This system checks all individuals who arrive at U.S. borders, ensures they are who they say they are, and helps prevent known terrorists from entering the country. Data collected by US-VISIT are also used by homeland security, defense, law enforcement, and intelligence agencies for other important national security functions. US-VISIT has proven its value as a national security tool.

Despite the successful deployment of the entry component of US-VISIT, however, there still is no comprehensive exit system in place. As important as it is to know when foreign nationals arrive, it is also important to know when they leave. Full deployment of the biometric exit component of US-VISIT should be a high priority. Such a capability would have assisted law enforcement and intelligence officials in August and September 2001 in conducting a search for two of the 9/11 hijackers that were in the U.S. on expired visas.

Standardize Secure Identifications

Recommendation: "The federal government should set standards for the issuance of birth certificates and sources of identification, such as drivers licenses."

Eighteen of the nineteen 9/11 hijackers obtained 30 state-issued IDs that enabled them to more easily board planes on the morning of 9/11. Due to the ease with which fraud was used to obtain legitimate IDs that helped the hijackers carry out a terrorist act, the 9/11 Commission recommended that "the federal government should set standards for the issuance of birth certificates and sources of identification, such as driver's licenses."

The REAL ID Act established these standards by statute. In 2008, detailed regulations were issued setting standards and benchmarks for issuing driver's licenses. While nearly one-third of the states have complied with the first tier of benchmarks, the deadlines for compliance have been pushed back twice to May 2011, and a recent announcement pushed back compliance again until January 2013. The delay in compliance creates vulnerabilities and makes us less safe. No further delay should be authorized; rather, compliance should be accelerated.

The federal government should set standards for the issuance of birth certificates and sources of identification, such as driver's licenses.

In addition, there are still no minimum standards for birth certificates in place, as required by the Intelligence Reform and Terrorism Prevention Act of 2004. These standards are needed to close a back door that terrorists could use to obtain driver's licenses.

Develop Coalition Standards for Terrorist Detention

Recommendation: "The United States should engage its friends to develop a common coalition approach toward the detention and humane treatment of captured terrorists" and that "[n]ew principles might draw upon Common Article 3 of the Geneva Conventions on the law of armed conflict."

Within days of his inauguration, President Obama signed a series of executive orders on the treatment of detainees and barring the CIA from using any interrogation methods not already authorized in the U.S. Army Field Manual. This ended the CIA's authority to use harsh interrogation methods, but the administration is still grappling with how to close the Guantanamo prison facilities.

By bringing the U.S. into compliance with the Geneva Conventions as well as international and customary law on the treatment of prisoners, these executive orders have substantially fulfilled our recommendation. Looking forward, however, we are concerned that the issue of prisoner treatment has become highly politicized.

This is not good for the country or our standing in the world. Showing that bipartisan agreement is possible, and intending to reaffirm our values, the five Republicans and five Democrats on the Commission unanimously agreed on this recommendation. Together, we believed that our country's values require adherence to the rule of law and a commitment to human rights and humane treatment.

A lingering problem that two presidents have confronted is reconciling the rule of law with indefinitely detaining alleged terrorists. For too long, the president and Congress have delayed resolving this difficult problem. In some cases we lack sufficient evidence against the detainees, or the evidence we have is problematic because of the way it was obtained. We regard as positive the Executive Order that requires periodic review of the status of prisoners at Guantanamo. Congress and the president, however, must decide on a comprehensive approach that spells out clearly the rules of evidence and procedures and the forums in which they will be applied. Congress should anchor these decisions in a firm statutory basis.

Chapter 3: Conclusion

Today, our country is undoubtedly safer and more secure than it was a decade ago. We have damaged our enemy, but the ideology of violent Islamist extremism is alive and attracting new adherents, including right here in our own country. With important 9/11 Commission recommendations outlined in this report still unfulfilled, we fail to achieve the security we could or should have.

The terrorist threat will be with us far into the future, demanding that we be ever vigilant. Changing circumstances require that we regularly reassess our priorities and expenditures to determine what is needed to defend our country and people.

Our terrorist adversaries and the tactics and techniques they employ are evolving rapidly. We will see new attempts, and likely successful attacks. One of our major deficiencies before the 9/11 attacks was a failure by national security agencies to adapt quickly to new and different kinds of enemies. We must not make that mistake again.

Our national security departments require strong leadership and attentive management at every level to ensure that all parts are working well together, and that innovation and imagination are championed. Our agencies and their dedicated workforces enacted much change and we commend their achievements in protecting the American people. But there is a tendency toward inertia in all bureaucracies. Vigorous congressional oversight is imperative to ensure sustained vigilance and continued reforms.

Our task is difficult. We must constantly assess our vulnerabilities and anticipate new lines of attack. We have done much, but there is much more to do.

National Security Preparedness Group

Founded in 2007 by former Senate Majority Leaders Howard Baker, Tom Daschle, Bob Dole and George Mitchell, the Bipartisan Policy Center (BPC) is a non-profit organization that drives principled solutions through rigorous analysis, reasoned negotiation and respectful dialogue. With projects in multiple issue areas, BPC combines politically balanced policymaking with strong, proactive advocacy and outreach.

THE BENEFITS OF TRANSITIONING TO A NATIONWIDE WIRELESS BROADBAND NETWORK FOR PUBLIC SAFETY

JUNE 2011

THE WHITE HOUSE
WASHINGTON

The Benefits of Transitioning to a Nationwide Wireless Broadband Network for Public Safety

At a recent hearing before the Senate Commerce Committee, New York City Police Commissioner Raymond Kelly remarked that a 16-year-old with a smartphone has "more advanced communications capability than a police officer or deputy carrying a radio."[1] The failings of public safety communications systems include both interoperability—with the limitations of current systems becoming tragically apparent on 9/11 and in the aftermath of Hurricane Katrina[2]—and operability—with the cost-effectiveness and performance of traditional public safety devices trailing well behind those provided by modern commercial cellular operators.

With the emerging rollout of commercial services marketed as 4G, LTE-based wireless services, there is a once-in-a-generation opportunity to transform the effectiveness of our first responders through a national strategy to develop and deploy a nationwide wireless broadband network for public safety. Such a broadband service promises to enhance the effectiveness of public safety agencies and, if developed appropriately, can also ultimately replace their legacy (and very expensive) communications infrastructure and devices.

This report explains how the President's Wireless Innovation and Infrastructure Initiative can facilitate the transition away from the traditional, fragmented world of public safety communications to a next generation system. It begins by providing the relevant context, explaining, among other things, the drawbacks of today's systems, and it concludes by discussing benefits and opportunities made possible by a successful transition to an LTE-based nationwide network. In so doing, it recognizes that this transition will take some time and, in order for it to be successful, it must planned carefully, coordinated effectively, and begin as soon as possible.

I. The Legacy of Land Mobile Radio Systems and the Rise of the Modern Cellular Industry

Public safety agencies were the original pioneers of wireless technology. Indeed, public safety's use of Land Mobile Radio ("LMR") services dates back almost a century.[3] The Detroit Police Department, for example, used an early form of LMR in 1921, experimenting with a one-way (base-to-vehicle) system.

3. This historical discussion is drawn from Dale N. Hatfield, *The Technology Basis for Wireless Communications, in* THE EMERGING WORLD OF WIRELESS COMMUNICATIONS 49 (1996).

Based on the technology available at the time, systems like this one used Amplitude Modulation ("AM") located in the frequency range just above the AM broadcast band. Later, public safety agencies began to use systems in the Very High Frequency ("VHF") band, using the more effective Frequency Modulation ("FM") band.

Over time, as public safety communications technology advanced, the FCC authorized new spectrum allocations for these services. In the mid-1970s, for example, the FCC allocated additional spectrum in the 800 MHz band for private LMR (including public safety entities), making spectrum available not only for the traditional and conventional, single-channel dispatch systems described above, but also "multi-channel trunked systems."[4] Building on the increasing interest in developing such systems and encouraging "interoperability" among them, the public safety community launched a standards development effort that evolved into the Project 25 Initiative (P25).[5]

While the P25 effort made progress in facilitating greater levels of interoperability among first responders, there remains no national, interoperable LMR network and equipment costs remain very high. Several challenges hindered the progress of the P25 effort. Notably, over a decade after P25 got moving, the GAO concluded that "ambiguities in the published standards [for the Project 25 initiative] have led to incompatibilities among products made by different vendors, and no compliance testing has been conducted to ensure that vendors' products are interoperable…As a result, state and local agencies have purchased fewer, more expensive radios, which still may not be interoperable and thus may provide them with minimal additional benefits."[6] Since that GAO report, the Federal government has created a compliance assessment program for P25 equipment, and while successful, the program has limitations based on the level of industry participation and standards development progress.

Beyond P25 specifically, the lack of better-coordinated public safety communications reflects two basic historical facts. First, as a general matter, first responders are supported by state and local revenue bases and have always bought equipment from their own local budgets. As such, efforts to improve interoperability involved the difficult work of coaxing agencies that traditionally operated on their own to begin working with one another. Second, because for decades public safety was forced to provision its own services, public safety communications grew up in an environment in which being a "smart controller" of services provided by another entity was not an option. In the modern broadband world, by contrast, public safety agencies are generally not operating their own networks. They either procure such services from commercial providers (such as Verizon or Sprint) or they contract with a vendor to operate a network on their behalf (as Northrop Grumman has for New York City).

Over the last 25 years, the modern cellular industry has expanded exponentially. By the late 1980s, the commercial cellular industry was just beginning to outgrow the public safety community in terms of size and significance as a user of wireless technologies. From around 340,000 U.S. subscribers in 1985,

4. An Inquiry Relative to the Future Use of the Frequency Band 806-960 MHz; and Amendment of Parts 2, 18, 21, 73, 74, 89, 91, and 93 of the Rules Relative to Operations in the Land Mobile Service Between 806 and 906 MHz, *Second Report and Order,* 46 F.C.C. 2d 752, ¶¶ 16-17 (May 1, 1974).

commercial wireless grew nearly tenfold over the next 25 years, reaching over 300 million subscribers in 2010. Public safety, however, has largely continued to use wireless services outside this evolving commercial ecosystem. As such, it has failed to benefit from the economies of scale and the ongoing innovation that has taken place in that sector.

II. A Next Generation Public Safety Communications System

The success of the modern cellular industry has enabled its users to reap enormous benefits in operability—including ongoing innovation and cost-performance capabilities—and interoperability—where all users can access one another (for both voice and text communications). The requirements for public safety differ from commercial wireless users, however, making conventional commercial services generally unsuitable for public safety's mission-critical communications.

The traditional LMR systems and devices developed for public safety have served public safety agencies well with regard to meeting their unique requirements. Most notably, such systems are developed to provide rapid voice call-setup and group-calling capabilities. (Ordinary cellular systems, by contrast, can allow for seconds to go by before a call is delivered and answered.) When time is of the essence, as is often the case when public safety agencies need to communicate, it is important to have access to systems that achieve fast call-setup times. Similarly, unlike ordinary cellular systems, dispatch systems like those used by public safety allow for large talk groups to communicate either among individual units or by broadcast messages (think: "calling all cars").

Above and beyond rapid call-setup and group-calling capabilities, public safety agencies also depend on a number of other important functionalities. Most notably, public safety relies on devices that allow for a handset feature known as "talk-around," which enables two or more mobile or portable units to communicate without the aid of network infrastructure. In the case of emergency situations where such infrastructure is not available, a peer-to-peer mode of communications is crucial. Similarly, modern public safety dispatch networks provide queuing and priority access capabilities that traditional cellular networks were not designed to provide. In short, despite their operability and interoperability limitations, traditional LMR systems have provided public safety agencies with mission-critical capabilities that conventional cellular systems have not generally offered. These systems will continue to be essential for public safety communications until broadband systems are able to meet public safety requirements, particularly for mission-critical voice.

While maintaining their traditional LMR systems, public safety agencies are increasingly using commercial broadband systems to support their missions. Such agencies are adopting modern broadband systems in different shapes and forms, including using laptop computers in vehicles, as secondary communications devices (e.g., a smartphone), or for remote video monitoring. In many cases, agencies have relied on commercial off-the-shelf services. In some cases, jurisdictions have procured services directly, such as New York City's relationship with Northrop Grumman to build and operate a broadband wireless network.[7]

7. Press Release, Northrop Grumman, Northrop Grumman Wins $500 Million New York City Broadband Mobile Wireless Contract (Sept. 12, 2006), *available at* http://www.it.northropgrumman.com/pressroom/press/2006/pr31.html.

The development and deployment of LTE systems represent a new opportunity for public safety communications. For starters, public safety can develop and deploy a nationwide network that will enable greater levels of operability and interoperability in the mobile broadband arena than public safety has ever achieved in the world of traditional LMR systems. Moreover, this opportunity holds the promise of public safety systems that could be developed based on commercial standards to generate significant economies of scale, competition in equipment as well as services, and ongoing innovation of the kind experienced in the modern cellular industry. With the move to LTE, public safety can seize this very opportunity.

Given the growth of commercial services, the opportunity to leverage such assets promises to make the development and deployment of an LTE wireless broadband network for public safety far less expensive than it would if public safety were to own and operate such a network itself. In 1991, such a model (with less than 10,000 sites nationwide) was far from appealing. By contrast, the situation in 2011 (with more than cell sites in service) makes this a compelling opportunity.

The challenges of using commercial infrastructure are not dissimilar to those of adapting the commercially developed LTE standard and ordinary services to meet the requirements of public safety. In particular, public safety communications systems must be survivable and able to function in the midst of a natural or man-made disaster. To that end, such systems require a degree of "hardening" and backup power capability that can ensure that they are available during times of emergency. As with the development of lower cost devices, the opportunity to use infrastructure that can be shared between public safety and other users can greatly lower the cost for public safety communications. Notably, basic infrastructure—towers, high capacity lines, and electricity costs—can be shared in an environment where public safety has its own spectrum and network that meets its particular needs.[8] And as Part III explains, the President's Wireless Initiative provides a framework to make such a network possible.

III. The President's Wireless Initiative and Public Safety Communications

In his 2011 State of the Union address, President Obama announced his Wireless Innovation and Infrastructure Initiative,[9] specifically referencing the opportunity for a firefighter to use a handheld device to download the floor plans of a building before arriving at the scene of an emergency. Such technology, which could enhance the effectiveness of our first responders, is routinely used by enterprises like Federal Express to enhance their mission.[10] For our first responders, however, the best they can do in the current environment is to adopt ad hoc solutions based on commercial technology. Given the appropriate federal leadership, public safety can shape the development of emerging broadband solutions to specifically meet its needs, thereby providing a transition path away from its legacy equipment and networks.

8. Access to back-up satellite systems might well be another requirements for certain public safety systems, insofar as such a capability provides another backup network as well as an ability to communicate in remote areas.

9. The White House. "President Obama details plan to win the future through expanded wireless access." February 2011. http://www.whitehouse.gov/the-press-office/2011/02/10/president-obama-details-plan-win-future-through-expanded-wireless-access.

10. Hamblen, Matt. "FedEx to adopt rugged handhelds from Motorola." *Computerworld*. September 2009. http://www.computerworld.com/s/article/9138071/FedEx_to_adopt_rugged_handhelds_from_Motorola.

As President Obama outlined, the Wireless Initiative pays for itself and would reduce the deficit by enabling more efficient use of wireless spectrum and by freeing up spectrum for auction. This initiative catalyzes investment and innovation in the wireless broadband ecosystem by freeing up 500 MHz of spectrum over ten years through more efficient federal government and private sector use of this resource. This effort is expected not only to drive investment and innovation, but also to generate almost $28 billion in revenue. Obtaining such revenue, for which President Obama has reserved almost $10 billion in his 2012 Budget for deficit reduction, depends on Congress acting to authorize the FCC to conduct "voluntary incentive auctions" as well as an updated framework to facilitate the more efficient use of government spectrum (i.e., an update of the Commercial Spectrum Enhancement Act).

After using the proceeds from spectrum auctions to reduce the deficit, President Obama proposed four related measures to spur investment and innovation in next generation wireless technologies for public safety purposes. In two related steps, President Obama called for an investment in a nationwide wireless network for public safety communications based on 4G technology, and for the rollout of 4G services to at least 98% of the American population. These two steps are related because the construction of 4G services to otherwise unserved parts of the country will enable both public safety agencies to use those services and for citizens living in those areas to obtain service. Third, President Obama called for the D Block, which is a band of spectrum in the 700 Megahertz band that is required to be auctioned, to be reallocated for public safety. Finally, President Obama has championed the creation of a Wireless Innovation (WIN) Fund that would, among other things, support investments in research that would enable LTE-based technology to meet the particular requirements of public safety for mission critical data, voice, and video.

For the core commitments of President Obama's plan to be realized, Congress will need to address the relevant funding, technology, and governance issues that will enable a nationwide network for public safety to be developed and deployed.

Developing an effective nationwide public safety governance structure will be crucial to ensuring that public safety has access to a network with far greater levels of operability and interoperability than it has ever had before. A key part of this effort is moving away from the traditional path of individual jurisdictions making isolated purchasing decisions on equipment, devices, and services. Under that legacy model, the equipment and infrastructure were generally costlier, open standards that enabled public safety to support an innovation ecosystem (such as an "apps store" for public safety) did not exist, and even neighboring systems (or sometimes even communications systems within the same jurisdiction, such as fire and police) could not interoperate. Absent a governance system that will drive standard setting activity and ensure that local purchasing decisions support interoperability, there is a strong possibility that we will repeat the mistakes of LMR in the wireless broadband arena.

The management of wireless broadband network development and deployment requires an effective and empowered nationwide governance system. In particular, developing nationwide wireless broadband services tailored for public safety will require a national body that can specify the requirements for public safety communications, hold the license for public safety broadband spectrum, and oversee a competitive bidding process to enlist the best providers that can develop, deploy, and operate the appropriate wireless broadband system. Such a body should be composed of highly competent professionals, including leaders in the field of public safety, information technology, and cellular communications networking, operations, and deployment.

The continued development of effective regional, statewide, and local governance mechanisms is similarly critical to enabling the effective use of a wireless broadband network developed for public safety. In particular, such mechanisms ensure that the control over the network—including what agencies have priority in what circumstances—is exercised in a well coordinated fashion and is responsive to end user needs. Moreover, such mechanisms provide a basis for identifying key local issues with respect to coverage and opportunities for sharing infrastructure.

IV. The Opportunity for Cost Savings and Enhanced Effectiveness from a Nationwide Next Generation Public Safety Communications System

The development and deployment of a nationwide public safety next generation network promises significant opportunities for long term cost savings and improved functionality. While there are considerable initial Federal budgetary costs to establish a nationwide network, they will be offset in the medium and long run by three primary sources of savings: (1) reduced government spending focused on overseeing and managing today's fragmented and inefficient networks; (2) savings from reduced device and infrastructure costs; and (3) innovation enabled by competition and market entry as public safety adopts a modern wireless standard.

Even more important than the money saved, the Nation's first responders and public safety agencies will, on account of this initiative, be safer and more effective because they will have at their disposal a wealth of new devices, applications, and other cutting-edge technology. From accessing video images of a crime in progress, downloading building plans of a burning building to a handheld device, or connecting rapidly and securely with personnel from other towns and cities, a nationwide wireless broadband network for public safety will make a difference on a day-to-day basis—and not merely during the most severe emergencies when the availability of an interoperable and operable network will be at its most important.

A. The benefits from achieving a fully interoperable system

First and foremost, developing and deploying a nationwide wireless broadband system provides a unique opportunity to develop and deploy a network that is interoperable by design. The benefit of interoperability by design is difficult to capture as an economic matter because its value is in the more effective emergency response capability that results from those at the scene of an incident enjoining seamless and easily managed communications networks. It is also difficult to capture the costs of the assorted interoperability measures now being used, ranging from swapping radios to using Internet-based gateways to patch together non-interoperable systems.[11] In short, not only would interoperability be effectively achieved at the network level—providing our first responders with a greater level of effectiveness—but it would be achieved far more cost-effectively than today's solutions allow.

11. It merits note that such measures will continue to be used for the reasonably foreseeable future in that the transition to an LTE-based interoperable environment that replaces today's legacy LMR systems may well take a decade. Moreover, during this transition period, it will be important for LTE systems to have a level of backward compatibility to legacy LMR systems.

B. The benefits from a coordinated system for public safety communications

Today's public safety communication systems not only lack some of the capabilities of modern networks and commercial devices, but the systems are also fragmented across thousands of Federal, State, and local jurisdictions. This fragmentation puts the responders—and the public—at risk in emergencies like 9/11 or Hurricane Katrina, when different law enforcement agencies could not talk to one another. But beyond reducing the effectiveness of our public safety officials, this fragmentation also adds to the cost of communications systems, reducing resources for governments at every level. As one commenter explained:

> Particularly since 9/11, there has been great concern about the possibility of failures due to lack of interoperability, and failures due to a shortage of public safety spectrum. This paper shows how both of these and other serious problems are a logical consequence of America's fragmented approach to public safety, in which thousands of local agencies make independent decisions without a coherent strategy to unify or guide them. Because of this fragmented approach, public safety agencies build more infrastructure than they should, spend more taxpayer money than they should, and consume more scarce spectrum than they should, all for a system that is unnecessarily prone to interoperability failures.[12]

In general, the costs of maintaining this fragmented system are borne by Federal, State, and local governments. On the Federal front, DHS will award over $2 billion in grants for preparedness and homeland security as part of the FY2011 Budget, with many of the programs supporting communications procurement. Moreover, in a one-time infusion in 2007, the joint NTIA/FEMA Public Safety Interoperable Communications Grant program awarded $968 million to fund interoperable communications in 56 States and Territories.[13]

These costs to the Federal government—and the expenses incurred by State and local agencies—could be reduced substantially through the economies of scale gained by transitioning to a nationwide, interoperable network. An analysis of several different approaches concluded that the costs of this transition would be paid for in reduced spending towards the current, fragmented network within several years:

> Given the tremendous inefficiencies of the current fragmented system, as demonstrated above, it is perhaps no surprise that the cost of building an entire nationwide system is comparable to what is likely to be spent in just a few years to upgrade and maintain the existing infrastructure. For example, in the wake of 9/11, the U.S. federal government has dispersed billions of dollars in grants just to address communications issues at the state and local level, and billions more will be needed. In fact, the cost to upgrade the entire existing infrastructure has been estimated at $18 billion. In contrast, we found

12. Peha, Jon M. "How America's fragmented approach to public safety wastes money and spectrum," 33rd Telecommunications Policy Research Conference (September 2005), http://repository.cmu.edu/cgi/viewcontent.cgi?article=1029&context=epp&sei-redir=1#search="peha+waste+money+public+safety+communications.
13. Department of Commerce. National Telecommunications and Information Administration. "Public Safety Interoperable Communications (PSIC) Grant Program." Accessed May 2011. http://www.ntia.doc.gov/psic/index.html.

> that deploying a single 700MHz nationwide network that carries voice and data will cost about $10 billion.[14]

In addition to savings on Federal grants, one of the very significant benefits and opportunities from the President's plan is to provide federal first responders with the opportunity to use this network. It will require, however, just the sort of network—with the intelligent control capabilities of an advanced network—discussed herein to provide such users with the capabilities and assurances they need. To ensure that the public safety network is built to meet the requirements not only of public safety, but also Federal first responders, the Emergency Communications Preparedness Center is in the process—under the leadership of DHS—of developing an assessment of their broadband communications requirements.

C. Savings through economies of scale on devices and infrastructure

As it stands today, there are more than 2 million first responders in the Federal, State, and local governments.[15] This includes nearly 300,000 firefighters, more than 630,000 police patrol officers, and countless other public safety workers such as forest fire inspectors, correctional officers, and security guards. The Federal government, moreover, employs around 100,000 individuals in protective service occupations. Many of these public servants rely on advanced communication infrastructure and devices to go about their jobs every day. For our Federal, State and local governments, extra spending on communications devices comes directly out of the budget used to hire and retain police officers, fire fighters, and other first responders—not to mention education, healthcare, road maintenance, and other public services. Once it is fully implemented, the President's plan will allow governments at all levels to save on communications device and infrastructure costs, leaving more resources for State and local governments to improve public safety and other services.

The cost difference between traditional devices used by public safety and commercially available ones is quite stark. As a recent Congressional Research Service report found, "the latest radios developed for public safety…cost between $4,000 and $6,000. The current narrowband radios being used for 700 MHz networks typically start at $3,000."[16] By contrast, commercially-available 4G smartphones cost around $600.[17] To be sure, as explained above, this is not an apples-to-apples comparison. Although commercial smartphones have some functions that go beyond public safety communications devices—think of Internet-enabled applications available on such devices—they lack the ruggedness, reliability, rapid calling and conferencing, and direct device-to-device connectivity of traditional LMR systems and equipment. Consequently, a core part of the President's initiative focuses on developing the necessary technology based on the LTE standard to meet the requirements of public safety, enabling public safety to use commercially-developed handsets.

17. M. Maesto, "Apple Selling Unsubsidized Phones for $500-700: Report," *available at* http://www.eweek.com/c/a/Mobile-and-Wireless/Apple-Selling-Unsubsidized-iPhones-for-500-to-700-Report-682945/.

Once the relevant requirements are built into public safety systems based on 4G technology, end user devices for such systems are expected to be between five and ten times less expensive than today's LMR technology. As the Congressional Research Service concluded, "The participation of commercial carriers in developing and deploying, for example, a common radio interface, is expected to put the cost of public safety radios in the same price range as commercial high-end mobile devices ($500)."[18] Similarly, an analysis by Andrew Seybold concluded that "the overall cost savings will be substantial and we believe that the industry is willing to work with the public safety community to provide the types of devices it requires at reasonable costs."[19]

With respect to savings on infrastructure, public safety communications systems that leverage existing commercial (and governmental) infrastructure can be cost effective. Similarly, using greater leverage in procuring devices that are used across a national network also promises considerable cost savings. In examining this issue recently, the FCC found that leveraging available commercial systems could save considerably on capital expenditures compared with relying on the existing public safety communications infrastructure.[20]

D. Providing better performance and cost effectiveness through innovation

Public safety communications will benefit from a broader market for devices and technology, overcoming the fragmentation of today's often-proprietary systems and improving interoperability through non-proprietary, open standards of commercial wireless technology. Participation in a broader market based on open standards will also allow public safety to enjoy the benefits that come from many more firms competing to offer goods and services. Not only will devices and infrastructure be upgraded and improved based on advances in commercial technology, but public safety's adoption of an Internet-based framework will enable developers to provide open and standards-based applications for public safety use. To facilitate this opportunity, the President's plan calls for clear, nationwide standards that make public safety systems interoperable across jurisdictions and vendors.

Government Accountability Office findings support the fact that the lack of an open standards and a commercially vibrant ecosystem constitutes a critical weakness in public safety communications.[21] Further, a recent Federal Communications Commission letter to the Chairman of the House Committee on Energy and Commerce describes how clear, nationwide standards have the potential to rectify the poor performance currently experienced in public safety.[22] In particular, the FCC explained "the beneficial effect of competition through open standards" as follows:

> P25 systems still rely upon proprietary solutions and the beneficial effect of competition through open standards is not fully realized. A comparison to Tetra, a European standard similar to P25 but which was successfully completed in 1995, makes this stagnation clear. Though similar in function to P25, Tetra products are both more spectrally efficient than P25 and significantly cheaper…A broad framework for interoperability is essential to ensuring that this network is interoperable from day one and remains so as the technology evolves.

The former Los Angeles Chief of Police testified that modern broadband networks for public safety would allow law enforcement to deploy a range of innovative new technologies: "Today, many agencies have established Real Time Crime Centers that are leveraging new technologies to do an even more effective job of fighting crime…New technologies such as automated license plate readers, biometrics, medical telemetry, automated vehicle location, and streaming video only scratch the surface of the capabilities that will be carried by broadband networks."[23] Similarly, New York City Police Commissioner Raymond Kelly reiterated the importance of modernizing public safety communications in Congressional testimony in February:

> [An effective broadband network] could provide officers with an immediate, digital snapshot of anyone they detain. It would give them the suspect's address, prior arrest history, and other critical details. The officer would be able to take electronic fingerprints at the scene and compare them instantaneously with those in local, state, and federal databases. This kind of situational awareness is vital to the safety of the officers and members of the public.[24]

The testimony above clearly demonstrates public safety communications' need for nationwide, interoperable, open, standards-based voice and data broadband networks to replace the legacy public safety systems in use today. Of the many benefits a nationwide broadband network could enable, perhaps the most critical is to improve situational awareness and provide the opportunity for comprehensive identification.

In a public safety setting, accurate information about the subject, the surrounding area, and the environment is critical. Law enforcement and other public safety practitioners make better and more informed decisions when interacting with the public if they can access comprehensive identification and databases containing a range of information (e.g., driver's licenses or other photos; records of warrants, arrests, prison time, school attendance, or history of violent behavior; and customs and immigration status). Even current information with respect to weather or environmental concerns such as flood plains and wind direction can improve a practitioner's ability to do an effective and efficient job. But all of this information—pictures, records, video, etc.—requires bandwidth and the technology necessary to deliver such information to a handheld device. As explained above, that technology does not need to be invented, only tailored to meet the needs of public safety.

23. Bratton, William. Testimony Before the House Committee on Energy and Commerce Subcommittee on Communications, Technology, and the Internet. September 2009. http://democrats.energycommerce.house.gov/Press_111/20090924/bratton_testimony.pdf.

24. Kelly, Raymond. Testimony before the Senate Committee on Commerce, Science, and Transportation." February 2011. http://pdf.911dispatch.com.s3.amazonaws.com/senate_hearing_d-block_feb2011.pdf.

One example of comprehensive identification and improved situational awareness is the use of license plate readers. Public safety is quickly recognizing the value of license plate reader (LPR) technology in both the fight against crime and the battle against terrorism. LPRs are used in fixed, portable, and mobile environments to check against a defined alert lists for wanted status.[25] These lists may be combined or customized as needed and may include thousands of plate numbers at any given time. Checking vehicle status via LPR can be done hundreds, even thousands, of times in a single shift. Without LPRs, a patrol officer determines wanted status by either manually entering a plate via an in-car computer system or requesting the check by radio. Recognizing a wanted vehicle solely by observation relies on memory or reference to a printed list called a "hot sheet." Since LPR checks require little to no action on the part of the officer, full attention can be given to other tasks, such as driving or looking for crimes in progress, making the entire process much more effective while enhancing public and officer safety.

No matter how the data transport is achieved, the available bandwidth to provide the connectivity is critical to the performance of the system. Although some agencies still rely on manual flash drive updates at shift changes to update LPR systems, many are moving to wireless connectivity (3G, 4G, WiFi, and satellite) to improve the timeliness of data uploads. Fixed and portable LPRs may have the benefit of wired connectivity for updating data, but increasingly are dependent on wireless connectivity because LPRs tend to be installed in remote locations or areas lacking fixed infrastructure.

Another example of comprehensive identification and improved situational awareness is the dramatic increase in both use and value of streaming video to and from emergency vehicles in the field. A doctor at a hospital, with real-time broadband data communication with an enroute rural ambulance crew, might more swiftly recognize a patient's symptoms, and be able to give instructions to the ambulance crew resulting in potentially better life-saving treatment. (Also see Appendix A).

In-car video can also be useful in providing visual information to mobile command posts and emergency operations centers in the event of a major incident. As an example, a patrol officer responding to a structure fire can provide real-time visual assessment of the structure and provide specific information relevant to proper response that an individual patrol officer may not even be aware is relevant to fire personnel. This provides incident command staff and emergency operations much better situational awareness and understanding as input to command decisions, and as in the previous example, much more rapid and appropriate response to evolving situations.

Conclusion

The President's Wireless Initiative promises to both improve public safety's effectiveness and reap savings by providing public safety with a state-of-the-art nationwide wireless broadband system. Such a system will finally enable it to benefit from economies of scale of commercial infrastructure and devices as well as ongoing competitive innovation in that ecosystem. As such, the ultimate savings and benefits from this transition are very likely to eclipse and more than compensate for the upfront investment in a nationwide, modern broadband network. Most importantly, this effort will provide public safety officials

25. An LPR takes a photo of the license plate using a Smart Phone or Tablet PC camera and runs a check against a defined list. *See* Appendix A.

with access to a modern communications network that will enable them to better protect themselves, our families, and homeland security.

Appendix A

Examples of Innovative Applications for Public Safety Broadband

1. **License Plate Reader**
   By taking a photo using a smartphone or Tablet PC's camera, the investigator can automate the process to capture the license plate information to determine if the car is stolen and its registered owner. Not only can the photo be stored, but information such as location and date/time can be useful intelligence.

2. **Fingerprint Identification**
   Through M2M technologies tethered to the smartphone of Tablet PC, the fingerprint of a subject can be collected and searched against Law Enforcement databases to quickly identify a person and assess the level of threat incorporating the existing capabilities from Quick Capture Platform (QCP) and Repository for Individuals of Special Concern (RISC). QCP enables the mobile identification and enrollment using a mobile system. RISC enables rapid search to quickly assess the level of threat within seconds with two to ten fingerprint images in a mobile environment.

3. **Facial Recognition**
   By taking a picture with a smartphone or Tablet PC's, a subject's photograph can be matched against existing databases such as the DMV or booking databases to determine identity.

4. **Scars, Marks, and Tattoos**
   By taking a picture with a smartphone or Tablet PC's camera, a symbol can be matched against existing databases to determine identity, relationships, and intelligence such as symbol affiliation, last time seen, contributing department/agency, etc.

5. **Field Interview Cards**
   After conducting a field interview, an investigator can enter the information in a timely manner without the need to return to the office. The investigator can also query the database for relevant data on previous interviews.

6. **Crowd Sourcing and Interactive Maps**
   In multi-agency operations such as the Inauguration and Super Bowl, crowd sourcing applications along with interactive maps enhance situational awareness by providing real-time data and gathering intelligence through geo-location aware services.

7. **Local, State, Federal Data**
   Various apps with the ability to query Local, State, and/or Federal databases will provide investigators the ability to selectively search the appropriate repositories and return the right amount of information in a timely manner. This also applies in the EMS field.

8. **Child Abduction Leads Tracking**
   To expedite law enforcement response in Amber alert cases, integration of leads tracking functionality into Virtual Command Center will facilitate leads assignments and investigator updates in the field environment. Geographic information system (GIS)/visual-based icon-driven

situational awareness and common operating picture user interfaces connecting operational data bases.

9. **Multi-vital sign patient data transmission and access to patient history,** including real-time multi-vital sign data, current patient status (medic notes in real time), and high-definition video (patient and imaging video and stills, e.g., CT and ultrasound) regardless of location (e.g. emergency department, incoming helicopter, incoming back-up ambulance(s)).

Let's give first responders tools needed to save lives (Houston Chronicle, 6/14/11)
By U.S. SEN. KAY BAILEY HUTCHISON and U.S. SEN. JAY ROCKEFELLER

On Sept. 11, 2001, our nation's first responders charged into the burning Twin Towers with little to guide them but instincts and courage. In the midst of the most violent and broad-scale attack on American soil since Pearl Harbor, emergency personnel and safety officials did not have access to the right tools — like an interoperable communications network - that could have helped save lives.

Nearly 10 years later, we live in a post-9/11 world marked by a national mindset of vigilance and substantially strengthened homeland security efforts. Unfortunately, our platform for modern public-safety communications remains stuck in the past. In fact, construction of a nationwide interoperable wireless network for first responders is one of the last outstanding recommendations of the 9/11 Commission.

After careful thought and deliberate negotiations, incorporating the valuable feedback of public safety officials and the wireless industry, we have come up with a framework to meet this national challenge, without costing taxpayers a dime. Our bill, S. 911, would lay the groundwork for building a nationwide public safety communications infrastructure - and it would do so in a forward-looking and financially responsible way, while also putting in place an effective and accountable governance structure.

In order to generate the revenue to fully offset the cost of construction of the public safety network, the bill allows broadcasters and other licensees of our airwaves to voluntarily remit back unwanted spectrum, which is used to transmit TV, radio and Internet signals. The freed-up spectrum would be reauctioned for commercial wireless broadband use in exchange for a portion of the proceeds through incentive auctions. These incentive auctions could clear as much as 120 megahertz of spectrum for new wireless broadband services, which could raise more than $28 billion in auction proceeds for the government. Further, our bill directs the Federal Communications Commission to auction at least 120 MHz of government spectrum suitable for commercial wireless broadband services and to allocate another 120 MHz for unlicensed uses, resulting in substantial innovation and hundreds of billions of dollars in economic growth.

Under our proposal, a critical band of high-quality spectrum, known as the "D block," will be allocated to public safety and paired with other public-safety spectrum to establish the nationwide public-safety broadband network. The Congressional Budget Office estimates that this will cost approximately $3 billion, which will be covered by funds raised by incentive auctions. Twelve billion dollars in proceeds will be used to deploy and maintain the public safety network. Additional funds will support high technology research and development. Excess funds - to the tune of $10 billion - will go toward deficit reduction. This legislation is efficient and cost-effective in that it utilizes our nation's valuable resources without requiring any additional taxpayer dollars.

The bill establishes a streamlined nonprofit corporation to build and oversee the wireless public safety network and to ensure it will seamlessly operate nationwide. This entity will leverage existing infrastructure to hold down costs. Its structure and management will be modeled after commercial wireless carriers in order to efficiently build the nationwide network. The corporation will utilize contracts with commercial vendors to build, operate and maintain the network. There is a robust structure in place to ensure significant input from state and local public-safety entities as well as oversight by the federal government. The corporation will be led by a board of directors that includes private sector, public safety and state and local expertise. Most importantly, this governance structure is designed to be self-sustaining, so it will not require funding through annual appropriations.

Our government has not always allocated precious spectrum wisely, nor has it always managed existing spectrum allocations efficiently. A shortsighted approach will create new challenges in the future. That is why we worked hard to make sure our proposal is comprehensive and forward-looking.

Finally, because our bill takes a broad approach that will free up considerable spectrum for commercial use in the next few years, it will be an economic driver. Over the long term, it will help the government allocate and manage spectrum more efficiently. Ultimately, this should produce as much as $400 billion in new economic activity through licensed and unlicensed uses of spectrum, a predictable supply of new spectrum, and important new research and development activities.

We believe we have come up with a balanced piece of technology legislation that will cost taxpayers nothing and, most importantly, will finally bring our nation's public safety system into the 21st century. Everything Congress does should emphasize fiscal responsibility and government efficiency, and we have made those imperatives a centerpiece of our proposal. We look forward to working with our colleagues and all stakeholders to pass this common-sense, bipartisan bill by the 10-year anniversary of 9/11.

Hutchison, a Republican from Texas, is ranking member of the Senate Commerce Committee; Rockefeller, a Democrat from West Virginia, is chairman of the committee.

Still Tongue-Tied, 10 Years Later: Let First Responders Talk To Each Other -- On Public Spectrum (Press Release, 6/1/11)
By Reps. Kirsten Gillibrand and Peter King

Just as Americans will never forget where they were on Sept. 11, 2001, we will also remember May 1, 2011, when President Obama announced Osama Bin Laden had been killed. This was a moment of justice for many New Yorkers, 9/11 families and first responders. It was a day the good guys won. But there are still those who want to do us harm, and we must remain vigilant in keeping our country safe.

New Yorkers know better than anyone the constant threat that our country faces. The city remains the No. 1 target for terrorists around the world who want to kill Americans.

So it is baffling that nearly 10 years after the attacks of 9/11, one of the key recommendations from the 9/11 commission report has yet to be implemented. The commission identified insufficient interoperability among communications systems used by first responders during the attacks and rescue efforts at Ground Zero as a major problem that needs to be fixed.

Firefighters, police officers, emergency medical technicians and other public safety professionals currently communicate on different frequencies and with different systems - creating barriers to providing a coordinated and efficient response during an emergency. It is alarming and unacceptable that any teenager with a smartphone can share more information than our emergency responders can. It is time to bring first responder technology into the 21st century.

The solution to this national security problem hasn't languished due to a lack of technological know-how. It has languished due to a lack of political will by Congress to create a public system tasked with maintaining a network devoted exclusively to public safety.

Opponents insist that we can rely on the private sector to build and maintain such a system; we strongly disagree.

As Police Commissioner Raymond Kelly pointed out in his testimony to Congress, "We know from past experience that we can't depend on systems run by the private sector. They are too susceptible to failure in a crisis. On Sept. 11 and after the 2009 crash of a commercial jet in the Hudson River, cell phone networks were deluged and police and fire communications over them became virtually impossible."

Sen. Jay Rockefeller (D-W.Va.) has introduced the Public Safety Spectrum and Wireless Innovation Act, and Chairman King has introduced the Broadband for First Responders Act of 2011. We are urging Congress to pass these bills before the 10th anniversary of the 9/11 attacks. The legislation would provide our first responders and public safety officials with the critical interoperable radio airwaves needed to effectively communicate in the event a major response is needed.

Here is how it works. The bill would create the framework for the deployment of a nationwide, interoperable, wireless broadband network for public safety by allocating 10 megahertz of spectrum, known as the "D Block," to the government for the purpose of public safety. This nationwide interoperable broadband network would finally enable first responders to communicate across jurisdictions and share critical data such as video feeds and up-to-date information in real time - making complex operations easier and safer.

The "D Block" would arm our men and women on the ground with the technology needed to share and disseminate information quickly and seamlessly, including receiving background checks, fingerprints, photos and videos instantly. Firefighters would be able to receive high-speed file downloads, including floor plans for a burning building. Police officers could use a hand-held device to look up outstanding warrants before arriving at a location. Emergency Medical Service workers could exchange diagnostic information about a victim with doctors while en route to the hospital.

Both bills are bipartisan and enjoy the enthusiastic support of law enforcement officials across the country.

To preempt some potential concerns: At a time when Congress is rightly focused on cutting spending, this legislation pays for itself, generating the revenue for the development and deployment of this network by auctioning off a variety of spectrum. Nor would it place burdensome requirements on police forces and firefighters to give up the spectrum they currently use.

The President has called for the development and deployment of just such a nationwide network. The job is long overdue. Just as we did with the 9/11 health bill for our heroes, we must and can come together, Democrats and Republicans, and pass this legislation. And we should do it now so our heroes have the best technology available when duty calls.

Gillibrand, a Democrat, is a U.S. senator from New York. King, a Republican, is a U.S. representative from Long Island who is chairman of the House Homeland Security Committee.

Chilling Echoes From Sept. 11 (New York Times, 5/22/11)
Editorial
http://www.nytimes.com/2011/05/23/opinion/23mon1.html

As the 10th anniversary of the terrorist attacks in New York, Washington and Pennsylvania draws near, one of the main recommendations of the 9/11 Commission remains unfulfilled: the creation of a common communications system that lets emergency responders talk to one another across jurisdictions.

The problem was laid bare in the tragic cacophony at the World Trade Center, where scores of firefighters perished as police and fire officials couldn't communicate on antiquated radio systems before the second tower fell.

Four years later during Hurricane Katrina, emergency workers from across the nation faced the same dangerous problem. They had to resort to running handwritten notes to warn of shifting conditions.

Congress should be haunted by the threat of new disasters finding rescue workers still incommunicado. Responsible lawmakers can mark the 10th anniversary by passing legislation to finally create a national public safety communications network.

The overall challenge is more complex than it sounds, touching on questions of financing, broadcast spectrum fights, technology innovation and turf battles among local public safety agencies.

Congress can begin cutting through a lot of that by approving the reallocation of radio spectrum to wireless broadband providers and public safety agencies. This would allow creation of a modern emergency system providing common access when needed by voice, video and text for responders now using separate voice systems typically jammed up in emergencies.

Senator John Rockefeller IV, chairman of the science and transportation committee, is championing the commission's dedicated spectrum approach, warning that the faulty emergency communication on 9/11 was "probably the greatest killer other than the planes themselves." He has the support of the ranking Republican, Kay Bailey Hutchison of Texas.

Crucial details remain to be settled.

Would a nonprofit corporation best manage the new network? What's the best way to get commercial broadcasters to yield needed spectrum — through incentive auctions proposed by the Obama administration?

Once Congress acts, this new generation of wireless broadband would require years of infrastructure construction. In the meantime, public safety and homeland security officials across the nation have been tapping into billions in federal aid designed to patch improvements into existing voice systems.

Critics warn there's been too much reliance on buying hardware and not enough on planning and coordinating among fiefdoms still reluctant to come to terms on single useful systems. In New York, where the scars of 9/11 remain raw, there is not yet a fully compatible system among police officers, firefighters and Port Authority forces, but officials insist they are making progress.

How many warnings does Congress need? How many more people will be endangered because of bureaucratic wrangling or political inertia? "Further delay is intolerable," the commission's leaders, Thomas Kean and Lee Hamilton, declared earlier this year. They are right.

Seybold: Reallocate the D Block to the public-safety network, rural America (FierceWireless, 5/16/11)
By Andrew M. Seybold

The $7.2 billion in federal grants that were to provide a push for broadband services into rural America was mostly wasted. Much of it went to fiber in some rural areas, but the bang for the buck in getting broadband into rural America is not to run fiber but to make use of wireless broadband. As of today, the push into rural America is still more of a crawl, and while many sections of rural America have systems of various types in the planning stages, growth is still slower than expected a few years ago.

WiMAX systems have made some gains; the promise of TV white space that can be used for longer-distance communications than Wi-Fi is coming online and might help in some rural areas, especially when combined with standard Wi-Fi to deliver signals into homes and offices. Some people have opted for satellite broadband. This, however, is expensive and, there is a lot of latency, which precludes some Internet activities such as banking and other secure applications that time-out over satellite systems. While some of the rural cellular networks have been deploying wireless broadband, much of rural America is still uncovered by broadband of any type, and there seems to be no concerted effort to change that.

There is one solution on the horizon that could bring broadband to most of rural America in record time. It will be wireless and use LTE on 700 MHz. How is this possible? Well, it depends on some things that are happening in Congress right now, but if the results turn out favorably, and I believe they will, this will be a solid opportunity for rural power companies, telcos, ISPs, and others that serve rural America today.

How will this work? Public safety is engaged in a debate with the FCC and Congress to add the 700 MHz D Block to its existing 10 MHz of spectrum to have a full 20 MHz of broadband spectrum. This spectrum is necessary for video and data services in most of the country, but, in rural America, it could be shared with any and all of those I mentioned above.

My thoughts on this are as follows: Rural power companies already have right-of-ways for their electric lines and high-tension towers that make ideal cell sites. They also serve rural America with fleets of trucks that are available for service calls. If the rural power companies entered into a private/public partnership with the public-safety agencies in their areas and assisted in the buildout of the spectrum (the full 20 MHz), then there would be enough for public safety, which needs it no matter where they are, enough for power companies to use the same network on a secondary basis for their own smart grid, and enough bandwidth to sell both fixed and mobile broadband services to the power customers.

Likewise, rural telcos could participate by partnering with and building out portions of the system. They could then resell service to their customers for fixed and mobile services. ISPs could also get into the game, perhaps using the 700 MHz LTE system in combination with TV white space and Wi-Fi to serve small towns with broadband services.

Public safety would get the network it needs in rural America, and those living and working in rural America would have access to wireless broadband services faster than with any other proposal I have seen. The network could be built more quickly, be cheaper, and provide services where there is no economic incentive to build out commercial wireless networks. Public safety brings spectrum to the table and the core users for the network. Private partners could contribute whatever they have to reduce public safety's cost for the network, and it would be built within a five-year period.

The glitch in all of this is that the reallocation of the D Block and the federal funding of the public-safety network are in the hands of Congress. There are several bills pending in both the House and the Senate to make this happen and the executive branch has expressed its desire to see it accomplished, so what public safety needs are the votes in Congress to get these bills passed, preferably between now and the 10th anniversary of 9/11 this September.

If this makes sense to you, then you should contact your Congressional representatives and tell them you are in favor of the reallocation of the D Block and funding of the public-safety network. This is one of the very few triple-wins (win, win, win) that has come to wireless in a long time. Public safety wins, rural providers win, and the citizens who live and work in rural America win.

We need to provide broadband services to rural America. It is imperative for them and for all of us. They are entitled to the same type of broadband access that those of us who live in the cities and suburbs enjoy today. This plan is a great way to accomplish this, and, for the first time, it becomes economically feasible for all parties concerned. If we wait for more stimulus money (which I don't believe will be forthcoming) it won't happen. Those within the federal and state governments who are working on solving this problem should take a long, hard look at this solution.

Andrew M. Seybold is an authority on technology and trends shaping the world of wireless mobility. A respected analyst, consultant, commentator, author and active participant in industry trade organizations, his views have influenced strategies and shaped initiatives for telecom, mobile computing and wireless industry leaders worldwide.

An opportunity to prepare our country's first responders (The Hill, 5/18/11)
By Peter Rysavy

Several weeks ago the distinguished Chairmen of the 9/11 Commission, Lee Hamilton and Thomas Kean, offered a stark warning to Congress, "The inability of first responders to communicate with each other was a critical failure on 9/11 … [that caused] needless loss of life."

The only realistic option for helping prevent a repeat of that horrific experience is for Congress to move quickly on legislation that will enable a national broadband network for emergency services by reallocating a portion of the nation's radio spectrum, specifically the 10 MHz D Block (758-763 MHz and 788-793 MHz) to public safety. Virtually every first responder organization has endorsed this option, including the Fraternal Order of Police and International Association of Fire Chiefs.

This public safety broadband network would enable first responders to seamlessly communicate with one another across the country. That is something that has been elusive in the past. There is a path forward before the nation now.

Discussions of radio spectrum are often dry, technical matters, which is why Hamilton and Kean deserve credit for the bluntness of their warning. Nearly ten years after those 2001 attacks, our first responders still do not have a nationwide, dedicated system to communicate with each other. In layperson's terms, that means rescue teams coordinating real-time emergency responses cannot access the instant data communication that ordinary cell phone users have used for years.

Think of the implications for police, fire, and rescue teams as they try to coordinate emergency responses to the volatile tornadoes that tore through southern states, or the forest fires that raged through Texas, or another devastating hurricane like Katrina. Regardless of whether the emergency communication is voice or data, it has to be reliable, instant and accessible by officials from across a state or even, as is often the case with forest fires, across entire regions. It also has to be accessible by officials from local, state and federal agencies, which currently do not use a single standard handset.

The reasons why allocating the D block to public safety makes sense are easy to understand. A dedicated public safety network using paired spectrum in the 700 MHz band establishes the capacity to support the bandwidth intensive uses public safety officials need; it reduces the costs to deploy an interoperable network; and it enables more dependable network operation than otherwise possible.

To put this in context, consider that the current bandwidth set aside for public safety could be quickly consumed by just a handful of emergency responders convening on the same location. Once bandwidth is consumed, the network can no longer operate reliably. Applications will run extremely slowly, possibly fail entirely or worse yet, require a full-system restart. The result will be seriously degraded communication – or worse, no ability to communicate – during situations when rescues are being coordinated and lives are at stake.

There is another technical issue driving this debate. While commercial wireless operators can design networks based on projected usage patterns, emergency networks must be ready to sustain sudden bursts of communications as first responders convene on a disaster. Public safety communications require more robust and resilient network architecture than is typically deployed by commercial service providers.

Fortunately, there is bipartisan momentum in Congress to reallocate the D block to enable the kind of dedicated, national wireless broadband network first responders need. Sens. Jay Rockefeller (D-W.Va.), Joe Lieberman (I-Conn.) and John McCain (R-Ariz.) have all introduced legislation, as have Reps. Peter King (R-N.Y.) and Bennie Thompson (D-Miss.). President Obama himself endorsed the concept this spring.

As 9/11 Commission Chairmen Hamilton and Kean emphasized to Congress, lives are at stake. We saw during 9-11 and Katrina how quickly wireless networks can become overloaded during emergencies, leaving both the public and our responders unable to communicate.

This is a vitally important decision, and an once-in-a-lifetime opportunity to arm our country's first responders with the mobile high-tech capabilities they need. We should not squander this incredible opportunity as a nation.

Peter Rysavy is a wireless technology consultant and president of Rysavy Research.

Attention Congress: We Need More Phone Spectrum, And Soon (Forbes, 5/4/11)
By Lawrence J. Spiwak, Phoenix Center
http://blogs.forbes.com/ericsavitz/2011/05/04/attention-congress-we-need-more-phone-spectrum-and-soon/

Americans love their mobile devices. With the rapid adoption of smartphones and tablets, the amount of data transmitted across mobile devices has exploded by 8,000% in four years on some networks, and experts expect demand to continue to increase exponentially over the coming years. However, as we demand more wireless broadband, the amount of spectrum available for these uses is rapidly becoming crowded, to the point where engineers are beginning to speak of "spectrum exhaustion." So as consumers switch from traditional mobile voice service to 4G broadband services, not only do providers need more spectrum, but this spectrum needs to be made available in large, contiguous blocks in order to maximize spectral efficiencies and to minimize network deployment costs.

With some carriers anticipating total spectrum exhaustion in their busiest markets by 2014 – just three years away – is there a solution to this looming problem?

In the short run, carriers have taken steps to manage spectrum more efficiently by splitting cell sites, offloading traffic onto local WiFi connections and upgrading back-haul networks. Similarly, carriers have introduced tiered pricing plans and data caps to curb demand usage. Neither of these options truly solves the problem, however.

The longer-range solution is for the federal government toc re-purpose unused and underused radio spectrum for mobile broadband purposes. Already, the Obama Administration in conjunction with the Federal Communications Commission has proposed to free up 500 MHz of spectrum for commercial use over the next 10 years, and the National Telecommunications and Information Administration, the government entity charged with overseeing federal spectrum usage, has identified 115 MHz to make available over the next five years. To make all of this happen, however, we need help from Congress. Senator Jay Rockefeller, chairman of the Senate Commerce Committee, has a proposal that might just be a win-win for everybody.

Under the Rockefeller plan, Congress would give the FCC the authority to hold "incentive" auctions to entice broadcasters to relinquish voluntarily some or all of their valuable spectrum in exchange for a portion of the auction revenue received. Broadcasters presently use 200 MHz of spectrum to provide over-the-air service to approximately 10 million American households. In contrast, wireless providers can access slightly more than 400 MHz of spectrum to serve a growing base of 292 million subscribers.

Rockefeller's proposal has some distinct advantages. First and foremost, because incentive auctions are 100% voluntary, Rockefeller's proposal takes the political fight of whether broadcasting is the best use of the nation's airways off the table. Second, unlike the recent DTV transition, the primary broadcast TV signals would not change, nor would consumers be required to purchase new equipment.

Finally, but perhaps most importantly, spectrum incentive auctions can deliver much needed revenue to the U.S. Treasury.

But there is more to the story. While commercial operators are facing spectrum exhaustion, it is a little-known fact that our first responders are facing the same problem. As we saw on September 11 and during Hurricane Katrina, the inability of public safety agencies to communicate quickly and effectively with each other needlessly cost lives. Leaders such as Tom Kean and Lee Hamilton, the co-chairs of the 9/11 Commission, have joined hundreds of public safety organizations around the country in calling for more spectrum to public safety.

Under Senator Rockefeller's plan, the FCC would also reallocate a 10 MHz block of spectrum (known inside the Beltway as the "D Block") for public safety use, thus providing first responders with a single 20 MHz block of contiguous, dedicated high-quality spectrum to operate their network. While some would argue that we should not be giving spectrum away to anyone, the fact is that Rockefeller's proposal will save taxpayers significant costs in the long-run by maximizing spectral efficiency today over having to pay for a more expensive network tomorrow that must accommodate a wide variety of non-contiguous radio bands.

Like it or not, the clock is ticking on spectrum exhaustion, both for consumers and our public safety professionals. Unless we want a market characterized by higher prices, failed data sessions, dropped calls and stifled innovation, policymakers need to implement a cohesive spectrum policy with a large degree of urgency.

Ten years later and still no solution (The Hill, 9/12/11)
By Sen. Kay Bailey Hutchison (R-Texas)
http://thehill.com/opinion/op-ed/181055-ten-years-later-and-still-no-solution

America saw the bravery and dedication of our country's first responders 10 years ago when terrorism struck. The same courage has been exhibited every day since 9/11 by police, firefighters and other emergency personnel who continue to face danger in order to protect us.

Robust and reliable communications is one of the most important tools these brave men and women use to keep us safe. Unfortunately, the inability of first responders to communicate with each other led to needless loss of life on Sept. 11. The 9/11 Commission made resolution of this problem a key recommendation in their report to Congress. They urged Congress to make additional radio spectrum available for public safety purposes to help improve radio interoperability.

Yet, 10 years later, that recommendation remains unfulfilled, and a lack of interoperability continues to hamper the efforts of first responders today.

We have all heard stories about responders resorting to hand-written notes passed across rubble piles during disasters because their devices are incapable of communicating with other responders. As emergency personnel rush to protect lives and property during hurricanes, earthquakes, wildfires, terrorist attacks and other emergency situations, it is unconscionable that they have to do so with decades-old technology and subpar connectivity.

Today, America leads the world in technological capabilities. Every corner coffee shop advertises free Wi-Fi and teenagers have smartphones, yet our police and firefighters are forced to use outdated communications in their duties. This is unacceptable, and the time has come for our public service networks to have parity with commercial offerings.

To rectify this situation, Sen. John Rockefeller (D-W.Va.) and I introduced the Public Safety Spectrum and Wireless Innovation Act, S. 911, which provides America's first responders with the dedicated spectrum and funding necessary to deploy an interoperable wireless broadband network for public safety use. It will help also to create new jobs and reduce the deficit. Our bill received overwhelming bipartisan support in the Senate Commerce Committee and has the broad bipartisan support of numerous governors, mayors, and public safety organizations across the country.

In particular, S. 911 would allocate the critical D Block of spectrum to public safety so they have sufficient bandwidth to meet current and future wireless broadband needs. Some people argue that this spectrum band should be auctioned for commercial use, but such an approach is pennywise and pound-foolish. This legislation would auction other spectrum blocks, contributing an estimated $6.5 billion to debt reduction. We are confident, however, that number will increase significantly with further modifications to S. 911.

Just as demand for spectrum in the commercial sector is increasing, public safety's wireless broadband needs are going to grow rapidly over the next decade, exhausting the capacity of their current spectrum supply. Studies show that without the D Block, police and firefighters will struggle to meet even day-to-day community public safety challenges like bus crashes, apartment building fires, bank robberies, coal mine collapses and multicar accidents. If everyday incidents will overload public safety broadband networks without the D Block, how can first responders be expected to communicate during catastrophic emergencies like another terrorist attack or large natural disaster?

S. 911 addresses the wireless industry's urgent need for more bandwidth by reallocating hundreds of megahertz of additional spectrum for mobile broadband purposes. The Congressional Budget Office has said that our bill would be completely paid for by spectrum auction proceeds and would actually bring in billions of dollars for deficit reduction.

Studies indicate also that pumping additional spectrum into the marketplace will spur massive private sector investment, generating hundreds of thousands of new jobs and hundreds of billions of dollars in new economic activity. With unemployment above 9 percent, this is exactly the kind of job-creating boost that our economy needs right now.

This critical legislation can create new jobs, grow the economy, reduce our massive fiscal deficit and provide first responders with the tools they need to make every American safer. Working in a bipartisan fashion to enact such legislation is the sort of leadership that Americans desperately want from Congress today. America's first responders face danger on our behalf without hesitation; they surely deserve Congress's best efforts in return.

Hutchison is the ranking member of the Senate Commerce, Science and Transportation Committee.

We don't need to auction the D block spectrum for public safety (*Red State*, 3/30/11)
We must avoid cargo cult markets
Posted by Neil Stevens
http://www.redstate.com/neil_stevens/2011/03/30/we-dont-need-to-auction-the-d-block-spectrum-for-public-safety/

Remember the Digital TV transition? That was when we took advantage of improved technology by making all the broadcast TV stations give up their old, huge blocks of wireless spectrum, in exchange for receiving new, narrower blocks. By making the switch, we made room for new wireless technologies to bloom.

That room was split into 5 "blocks." The C block, for example, was auctioned off to Verizon, who's using it for 4G LTE wireless Internet. The B block has been bought up heavily by AT&T for the same use. However the D block went unsold. When it went up for auction, nobody even met the reserve price, so today the D block remains available.

After 9/11, we learned that we need to make more spectrum available to first responders. The D block would work great for that purpose. So why don't we just hand out the D block to first responders across the country? You'd think that'd be obvious, but unfortunately some Republicans are hesitant.

Instead of just showing leadership and doing what we need to do for honest-to-goodness civil defense, we're playing with cargo cult markets.

Here's what the chairmen of the 9/11 Commission, Thomas Kean and Lee Hamilton, told the Senate on the matter:

> The inability of first responders to communicate with each other was a critical failure on 9/11. Incompatible and inadequate communications led to needless loss of life. To remedy this failure, the Commission recommended legislation to provide for the expedited and increased assignment of radio spectrum for public safety purposes.
>
> To date, this recommendation languishes. We find this unacceptable, because quite literally lives are at stake. The political fight has been over whether to allocate spectrum directly to public safety or auction it off to wireless bidders who would then be required to pay for a nationwide public safety communications network.
>
> Initially, some advances were made when 10 MHZ of radio spectrum were allocated to public safety. The overwhelming majority of our nation's police chiefs and first responders, however, support the allocation of an additional 10 MHz of radio spectrum—the "D block"—to the existing dedicated public safety spectrum. Public safety agencies would be able to use the D block spectrum to build a nationwide interoperable broadband spectrum, allowing diverse agencies to communicate with each other, and supporting mission critical voice, video, text, and other data transmissions.
>
> In his State of the Union address, President Obama called for allocating the D block spectrum to public safety. He also supports allocating $7 billion in federal funding to support a build-out of the network to ensure it reaches cash-strapped localities, especially rural communities.
>
> We support the immediate allocation of the D-block spectrum to public safety. We must not approach these urgent matters at a leisurely pace. We don't know when the next attack or disaster will strike. Further delay is intolerable. We urge the Congress to act.

This is something we can just do. Nothing is stopping us from giving the D block out to state and local governments to apply the lessons of 9/11. However some of us are hesitant. We hear talk of assigning spectrum and we oppose it, because one of the great policy successes of the FCC in recent years has been the auctioning of spectrum to the private sector.

However we're not talking about giving away the D block to the private sector. We're talking about giving it away for public safety. If we were to put it up to auction, we'd literally be having the government charge the government for a government service. We wouldn't make our troops in Afghanistan pay for bullets. Why make firefighters pay for their emergency wireless telecommunications spectrum?

It all comes down to the fact that we're conservatives. While we mistrust government, we're not categorically opposed to government. It's alright for a legitimate government action to happen without a fig leaf of a market in front of it. We shouldn't pretend to privatize civil defense by creating sham auctions to allocate needed spectrum. It's time we got behind allocating the D block to first responders without any needless delays or hoops.

Why D-Block allocation matters (*PoliceOne*, 2/10/11)
Editor's Corner with PoliceOne Senior Editor Doug Wyllie
http://www.policeone.com/columnists/Doug-Wyllie/articles/3326502-Why-D-Block-allocation-matters/

Law enforcement and public safety must have a minimum of 20 MHz of broadband spectrum to meet current and future needs

Let's pause for a brief reminder about why D-Block allocation matters (or should) to cops.

1. Safety: Commercial networks now used by public safety agencies cannot fulfill mission-critical police, fire, and EMS operations needed during a large-scale emergency — they're simply not built to public safety standards of uptime, availability, and redundancy. These systems are not particularly fragile in normal circumstances, but we know that in a major catastrophe, everyone (and their cousin) will be trying to use the carrier network to contact friends and relatives to "see if they're okay." So, during a major emergency, when they would be most needed, the existing broadband communications systems would simply fail, putting first responders' lives at risk. Needless to say, this totally unacceptable.

2. Efficiency: The fact of the matter is that public safety needs a full 20MHz of 700MHz spectrum to build a robust nationwide broadband network capable of carrying data, video, and eventually one day, voice transmissions. The 10 MHz D-Block is immediately next door to the existing 10 MHz of 700 MHz already occupied by public safety, and simply extending the build to the D-Block would completely eliminate a host of technical issues (radio interference is just one problem you'd get from building on two distinctly separate 10 MHz bands as opposed to a single 20 MHz swath) and significantly reduce cost and complexity of building the network.

3. Timing: Now, finally, the concept has support from the President of the United States. During a speech at Northern Michigan University, in Marquette (Mich.), Obama officially threw his support behind an initiative that was originally called for by the 9/11 Commission more than seven years ago. Almost at the same time that Obama was stumping for the cause of D-Block allocation to public safety, Representative Peter King of New York — who serves as House Homeland Security Chairman — reintroduced a bill to devote that very same (and very valuable) swath of 700MHz wireless broadband spectrum to public safety agencies for the purpose of building a nationwide, interoperable mobile broadband network. Representative King was joined by Representative Bennie Thompson of Mississippi in the introduction of the Broadband for First Responder's Act of 2011 (H.R. 607).

Recall that in mid-2010, Senator Jay Rockefeller (D – W.V.) introduced the Public Safety Spectrum and Wireless Innovation Act of 2010 (S. 3756), which builds on several proposed pieces of legislation already gaining momentum in Congress including the First Responders Protection Act of 2010 (S. 3625) and Broadband for First Responders Act of 2010 (H.R. 5081). In early 2011, Rockefeller reintroduced the bill for consideration. Rockefeller's bill would, among other things, allocate the D-Block to public safety, establish a means by which technical standards would be developed, and perhaps most importantly, fund the construction and maintenance of the nationwide interoperable wireless broadband public safety network.

Assuming that the White House, Senate, and House plans coalesce as it presently appears they will, the 20MHz-wide, national, interoperable, wireless broadband network it produces would provide law enforcement and (other public safety agencies) with one of the key tools that has been missing in their mission of protecting lives in communities throughout the United States.

Admittedly, reasons two and three are a little esoteric, but that first reason alone should be enough for 99.99 percent of police officers to get behind this issue in one form or another. Just for good measure, here's a fourth reason for your consideration:

4. Cold, Rational Logic: The major telecommunications companies voted a resounding "no thanks" the last time this segment of spectrum came up for auction in Spring 2008. To do the same thing over and over and expect a different result is Einstein's definition of insanity. Let's not be insane and instead do what must be done — work very hard in the next few weeks and months to press Congress to pass legislation that will allocate the D-Block to public safety and provide funding needed to build and maintain a nationwide broadband network for public safety.

Allocation of the D-Block of 700 MHz wireless broadband spectrum seems to be imminently upon us. As was reported in this space late last month (and previously here, and here, and here), the march toward allocation of the D-Block to public safety has been about as slow as molasses going uphill in wintertime. But now, it seems to have finally hit a double-time stride.

Law enforcement and public safety must have a minimum of 20 MHz of broadband spectrum to meet current and future needs and must have access to new technologies to perform increasingly complex duties. These technologies must have adequate and dedicated spectrum that is managed and controlled by public safety to ensure that they will be more secure and reliable than commercial systems. The D-Block allocation is essential if we are to meet the critical needs of our nation's law enforcement and public safety community.

First responders need updated communication technology (Kalamazoo Gazette, 7/3/11)
By Bradley A. Stoddard, director of the Michigan Public Safety Communications System

A year ago, a massive brush fire in Roscommon and Crawford counties forced residents of a nursing home to evacuate. Local firefighters and first responders rushed to the scene and moved residents to safety as they quickly worked to contain the fire. While the flames destroyed hundreds of acres of land, as well as countless structures and personal items, not one life was lost. Michigan was fortunate -- but luck won't always cut it.

When a large-scale disaster or complex emergency situation occurs in Michigan, police officers, firefighters and EMS workers must have the ability to communicate in real-time with voice, video and data -- essential for carrying out skilled rescue efforts and saving lives. Michigan's first responders have statewide access to leading voice communications technologies, but lack high-speed data communications, which so many of us use on a daily basis on our smartphones, netbooks and tablets. Thousands more public safety workers across the country lack both high-speed voice and data networks that provide critical communications capabilities. Instead, they are stuck with aging, low-speed equipment and disparate radio frequencies that often prevent them from talking with each other, sharing information and coordinating efforts.

Nearly 10 years after the 9/11 terrorist attacks thrust the issue of public safety communications into the national spotlight, interoperability is still a challenge across the nation.

When responding to disasters and emergencies, our first responders deserve to be equipped with state-of-the-art voice and data communications systems; police, fire and EMS need a dedicated, nationwide, interoperable wireless broadband network to help them help you in times of need. An advanced data network would, for example, allow first responders to stream real-time video of an emergency scene in order to locate injured victims. It would mean seamless support for delivering medical care to the injured and coordination of a more effective response across organizations and county lines.

This type of network should be dedicated to public safety's exclusive use, rather than shared by a wide range of users like in existing commercially operated systems. Enabling use of the most modern, sophisticated and robust wireless applications available via a data network that prioritizes the needs of public safety will save lives in Michigan. Concurrently, the general public would still be able to communicate with loved ones during a time of crisis with this approach.

The first step to making this network a reality rests with the federal government. It has a one-time opportunity to reallocate wireless spectrum to public safety operations. Now, in both the U.S. Senate and House of Representatives, bipartisan legislation has been introduced to reallocate an additional 10 megahertz of spectrum (referred to as the "D Block") for public safety's use. Lawmakers across party lines understand the proposed legislation backing D Block reallocation is a must for public safety and the American taxpayer.

How public safety supports citizens and protects the nation has greatly changed in the past decade; technology has become the fundamental component to aid in their respective efforts. And as more and more first responders have lost jobs due to funding challenges, the need for higher technology standards has never been greater. Availability and use of high-speed broadband Internet technology should no longer be a benefit limited to those in large cities; those in rural America deserve the same opportunities.

Reallocation of the D Block to public safety builds a foundation for the protection of our borders and support of our people. This spectrum is a critical data highway for all levels of first responders, from local volunteers to the federal government.

The decision to reallocate D Block spectrum to public safety requires congressional action. Michigan's lawmakers should support the brave men and women of our state that work to keep us safe every day by listening to their needs and urging the reallocation of D Block spectrum. This isn't a field of dreams; Congress can deliver now in preparation for tomorrow.

Bringing First Responder Communications Into the 21st Century (Huffington Post, 7/21/11)
By Sen. Kirsten Gillibrand (D-NY)
http://www.huffingtonpost.com/rep-kirsten-gillibrand/bringing-first-responder_b_905730.html?ir=Yahoo

New Yorkers know better than anyone the constant threat that our country faces. As we've seen time and again, New York continues to be the number one target for terrorists around the world who want to harm Americans.

That's why, as the Senator from New York, I am extremely concerned that we not forget the lessons of 9/11.

One important lesson we learned on that horrific day was how crucial it is that our first responders can communicate in real time between agencies in a time of emergency. We have the best firefighters, police officers, emergency medical technicians and public safety professionals in the world, yet currently they communicate on different frequencies and with different systems -- creating barriers to providing a coordinated and efficient response during a crisis.

The 9/11 commission identified insufficient interoperability among communications systems used by first responders during the attacks and rescue efforts as a major problem that needed to be fixed.

Yet here we are nearly ten years later and Congress has failed to implement this recommendation.

The fact is, a teenager with a smartphone can share more information more quickly than our emergency responders can. This is unacceptable. It's time to bring first responder communications into the 21st century.

Yesterday, I stood with Senator Jay Rockefeller (D-WV), who has been a dedicated leader in this effort, Senator Charles Schumer (D-NY), Rep. Peter King (R-NY) and some our brave first responders to renew our call on Congress to pass the Public Safety Spectrum and Wireless Innovation Act before the 10th Anniversary of 9/11.

This bipartisan legislation creates the framework for the deployment of a nationwide, interoperable, wireless broadband network for public safety by allocating 10 megahertz of spectrum, known as the "D-block," for emergency communications.

This nationwide interoperable broadband network would finally enable our brave first responders to communicate across jurisdictions, share critical data such as video feeds and up-to-date information in real-time -- making complex operations easier and safer.

The "D-block" would arm our men and women on the ground with the technology needed to share and disseminate information quickly and seamlessly, including receiving background checks, fingerprints, photos, and videos instantly.

This bill would also generate the necessary revenue to pay for the development and deployment of this network through FCC auctions of the spectrum. So, not only does this bill not cost taxpayers a dime, but the CBO estimates it will actually reduce the deficit by $6.5 billion between 2012-2021. Which is why this bill has attracted support from Republicans and Democrats alike.

Just as we did with the 9/11 health bill for our heroes, Congress must come together, put public safety ahead of politics, and pass this bi-partisan legislation. And we should do it by the 10th anniversary of 9/11.

Police Chiefs Applaud Representatives King And Thompson For Introduction Of Legislation Allocating D-Block Spectrum To Public Safety (Press Release, 2/14/11)
International Association of Chiefs of Police
http://www.corrections.com/news/article/27798-police-chiefs-applaud-representatives-king-and-thompson-for-introduction-of-legislation-allocating-d-block-spectrum-to-public-safety

Alexandria, VA -- The International Association of Chiefs of Police (IACP) applauds Representative Peter King (NY-3) and Representative Bennie Thompson (MS-2) for introducing the Broadband for First Responder's Act of 2011 (H.R. 607), which will allocate D-Block spectrum to public safety for the development of a national interoperable public safety broadband network.

Mark Marshall, IACP President and Chief of the Smithfield, VA, Police Department said, "The IACP fully supports this legislation by Representatives King and Thompson. We urge other members of Congress to sign on as co-sponsors of the legislation and support our efforts to have the 700 MHz D-Block spectrum allocated to the nationwide Public Safety Broadband License."

Law enforcement and public safety must have a minimum of 20 MHz of broadband spectrum to meet current and future needs and must have access to new technologies to perform increasingly complex duties. These technologies must have adequate and dedicated spectrum that is managed and controlled by public safety to ensure that they will be more secure and reliable than commercial systems. The D-Block allocation is essential if we are to meet the critical needs of our nation's law enforcement and public safety community.

The International Association of Chiefs of Police is the world's oldest and largest association of law enforcement executives. Founded in 1893, the IACP has more than 20,000 members in over 100 countries.

It's Way Past Time to Create a National Wireless Public Safety Network (IT Business Edge, 2/1/11)
Posted by Carl Weinschenk
http://www.itbusinessedge.com/cm/blogs/weinschenk/its-way-past-time-to-create-a-national-wireless-public-safety-network/?cs=45348

Some things seem to just take too long. NewsFactor carries an Associated Press report that says the White House is backing a plan to dedicate 10 MHz of spectrum – the "D" block, according to the story – for a nationwide wireless public safety network.

The story provides good detail about the political and regulatory machinations, including the fact that a 10 MHz block already exists for this purpose. Putting the two side by side will constitute a good foundation going forward, according to the piece. The story says that Sen. Jay Rockefeller (D-W.VA) has introduced legislation to make this happen.

The reaction is that setting aside bandwidth for first responders and other emergency personnel undoubtedly is terrific. The second reaction – which occurs about a nanosecond after the first – is to ask: Why it is taking so long? Shouldn't such a network have been created sooner, say about a week after 9/11?

On one level, it is possible to say that a swatch (or two) of bandwidth as big as what the government is talking about wasn't available until recently. Perhaps. But there is no doubt that a way to cobble together enough bandwidth to let firefighters, police, emergency personnel and others communicate fully could have been found. Remember, these folks help people every year, during hurricanes and other weather-related emergencies.

With the emergence of advanced wireless networks, schematics of buildings and video from security cameras can be sent to first responders in route and other helpful steps can be taken. There simply is no reason such technology isn't common in the world of tablets, smartphones and other advanced devices.

The administration's backing of the use of D-block for a national public safety network isn't the only recent news in this area. Last week, the FCC decided that Long Term Evolution (LTE) – the leading 4G networking platform – will be used for the network. That's no surprise, but still is important. Subsequently, at least one company – Alepo – has introduced equipment that optimizes LTE for emergency uses.

The bottom line here is pretty simple: Get it done. Slade Gorton, a former Republican congressman from Washington who calls himself a fiscal conservative, also mentioned 9/11 in a guest editorial in The Seattle Times. He is in favor of the FCC's approach:

While the 112th Congress may be sharply divided over many issues, both parties have an opportunity to address this vital national-security priority by supporting the FCC's broadband plan for public-safety communications. Quite simply, I believe it is the best way to guarantee that a national interoperable network is built for first responders in both urban and rural areas.

The good news is that a fairly thorough Google search turned up no stories of any systemic communications failure during the Tucson tragedy last month. As horrible as it was, the actual shooting was over quickly. It is entirely possible that a longer-term event would have resulted in the same issues. The message is clear: It is time to create a network to meet first responders' needs. Indeed, it was time a decade ago.

D Block Spectrum: Setting the Record Straight

The Public Safety Alliance (PSA) is setting the record straight on the top five D Block Spectrum Myths. We are working together with more than 27 of the nation's leading public safety and state and local government associations to support legislation that would allocate this spectrum to America's first responders to build a nationwide interoperable broadband network.

"We support the immediate allocation of the D-block spectrum to public safety. We must not approach these urgent matters at a leisurely pace. We don't know when the next attack or disaster will strike. Further delay is intolerable. We urge the Congress to act."

–Thomas Kean and Lee Hamilton, Chairmen of the 9/11 Commission

Congressional Supporters of Public Safety include:

Senator Jay Rockefeller (D-WV), Senator Kay Bailey Hutchison (R-TX), Senator John McCain (R-AZ), Senator Joseph Lieberman (I-CT), Senator Harry Reid (D-NV), Senator Charles E. Schumer (D-NY), Senator Kirsten Gillibrand (D-NY), Senator Amy Klobuchar (D_MN), and Senator Barbara Boxer (D-CA), Senator Michael Bennet (D-CO), Senator Benjamin Cardin (D-MD), Senator Al Franken (D-MN), Senator Thomas Harkin (D-IA), Senator John Kerry (D-MA), Senator Frank Lautenberg (D-NJ), Senator Bill Nelson (D-FL), Representative Peter King (R-NY3), Representative Bennie Thompson (D-MS2), Representative John Barrow (D-GA12), Representative Shelley Berkley (D-NV1), Representative Leonard Boswell (D-IA3), Representative Vern Buchanan (R-FL13), Representative Yvette Clarke (D-NY11), Representative Chip Cravaack (R-MN8), Representative Keith Ellison (D-MN5), Representative Jim Gerlach (R-PA6), Representative Michael Grimm (R-NY13), Representative Jesse Jackson (D-IL2), Representative Sheila Jackson-Lee (D-TX18), Representative Eddie Johnson (D-TX30), Representative James Langevin (D-RI2), Representative Thomas Latham (R-IA4), Representative David Loebsack (D-IA2), Representative Billy Long (R-MO7), Representative Nita Lowey (D-NY18), Representative Carolyn McCarthy (D-NY4), Representative John Mica (R-FL7), Representative Michael Michaud (D-ME2), Representative Candice Miller (R-MI10), Representative Erik Paulsen (R-MN3), Representative Dave Reichert (R-WA8), Representative Laura Richardson (D-CA37), Representative Michael Rogers (R-AL3), Representative Heath Shuler (D-NC11), Representative Edolphus Towns (D-NY10), Representative Rob Wittman (R-VA1), and Representative Donald Young (R-AK).

The main goals reflected in H.R. 607, S.28, S.1040 and S.911 – allocating D Block to public safety and providing funding for network build out derived from revenue generated by auction of other spectrum as the top priority -- have earned bi-partisan backing including President Obama, Sens. McCain and Lieberman, Chairmen of the 9/11 Commission Gov. Tom Kean and Rep. Lee Hamilton, Senate Commerce, Science, and Transportation Committee Chairman John Rockefeller, Ranking member Sen. Kay Bailey Hutchison, House Homeland Security Chairman Rep. Peter King and Ranking member Rep. Bennie Thompson, as well as approximately another 30 Members of Congress as co-sponsors, and from both sides of the aisle.

D Block Spectrum: Facts vs. Myths

1. MYTH: Building out a nationwide public safety network will cost $30 to $45 billion.
   FACT: In its Broadband Network Cost Model, the FCC provided a range of cost estimates from $7.8B to $47.5B to build and operate a public safety network for over a ten-year period. This myth stems from taking the *worst case scenario* from the FCC's model, which assumed building brand new cell sites requiring zoning, permits and construction of a towers and facilities. The fact is that public safety fully intends to leverage its existing facilities wherever possible and will augment with existing commercial facilities when needed. The fact is that building a 20 MHz network would cost approximately the same amount as building a 10 MHz network. We agree with

Congressional leaders that the $10 to $12 billion in federal funding for network construction and sustainment reflected in S.1040, S.28 and H.R. 607 is adequate.

2. MYTH: Managing a public safety network may require a new federal bureaucracy.
FACT: There are no proposals to create a federal agency for the public safety broadband network. The PSA has consistently advocated that the network should be managed by public safety with the private sector in a public-private partnership. Proposed legislation addresses this through a non-profit corporation that would transition over the current public safety broadband license (PSBL) and combine it with the D Block within the non-profit's authority.

3. MYTH: America's public safety community lacks a rollout plan for deploying a nationwide interoperable network.
FACT: Once the spectrum has been allocated and a specific funding model established, the PSA has a plan to establish a nationwide outreach and coordination effort that will document every eligible public safety entity contact and their readiness for broadband. The public safety community is eager and ready to deploy this 21st Century network in order to protect our citizens and save lives.

4. MYTH: A commercial D-Block auction process will help ease the federal deficit.
FACT: A commercial D-Block auction process will actually cost taxpayers significantly more than allocating the D Block to public safety. An analysis by The Phoenix Center[i] suggests that the loss of auction revenues today is more than offset by higher auction revenues and lower public safety network deployment costs tomorrow. Thus, the auction adds, rather than relieves stress to the public budget. The study, conducted by a noted economist and former high-level FCC official, also found that assigning the D Block to public safety provides at least $3.4B more in social benefits as opposed to an auction. Additionally, the FCC has stated that public safety will need more than 10 MHz for broadband in the future, and we know that it cost no more to build out 20 MHz than 10 MHz for LTE when the spectrum is contiguous and is built out together. Yet, if the D Block is not allocated to public safety and not joined with the current and contiguous 10 MHz that public safety has repurposed for broadband already within the 700 band, then it will cost more than twice as much to identify and build out an additional 10 MHz of noncontiguous spectrum in the future.

5. MYTH: Connect Public Safety Now is a credible and legitimate voice for the public safety community.
FACT: Connect Public Safety Now has *no* connection to public safety. CPSN is a front group for cellular industry heavy-hitters including Sprint Nextel and is still operating on funding provided by T-Mobile before they withdrew from the coalition. Its goal is to have the D Block auctioned for commercial use, to bid on the spectrum and ultimately use it to increase its own corporate profits and shareholder value through unrestricted commercial use. The coalition does not care to provide public-safety grade, mission-critical network capabilities that public safety requires such as higher security, redundancy, "ruthless preemption" level priority access, roaming, build out to geography vs. population (meaning equal priority for rural areas) and back-up requirements.

Public safety's approach, the public-private partnership which the National Broadband Plan proposed to abandon, creates competition and jobs, enhances public safety and reduces the deficit. CPSN's plan jeopardizes all else just to try to create competition, and at its best, may only get them part of the way there with only 10 MHz.

Cell Phones and Nature

09.01.2011 by Andrew M. Seybold

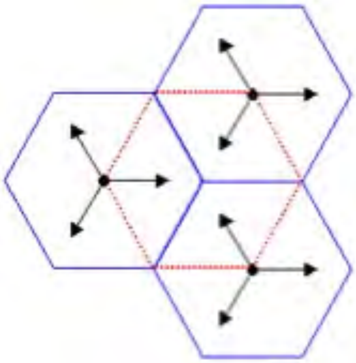
The East Coast has suffered a double whammy as we all know. First was the 5.8 earthquake followed by Hurricane Irene, which was not as bad as was feared but still bad enough that the damage will take a long time to repair. Both of these events caused problems for the commercial wireless networks but in very different ways, pointing out the major differences between network overload and cell site failures.

In both of these cases there were network issues. During the earthquake the problem was simple: The networks stayed up but they were overloaded and could not process all of the requests for service. This is the same scenario that has been experienced with landline phones for years. Remember how difficult it used to be to get a dial tone on Mother's Day? Perhaps you remember when after an earthquake in California or during the wildland fires you could not get a call through to your relatives using the wired network?

While the cause of wired and wireless phone system overloads are different, the results are the same. The network is up and running but the number of people trying to make calls simply overwhelms the network. In the case of wired phones, the reason is that after your dedicated line reaches the nearest central office your call is joined with all of the other calls on a cable or microwave link. This link transfers the requests and the calls overloaded the link since all of these systems are built on the premise that not all phone users will want to make a phone call at exactly the same time. Therefore, the wired phone systems were designed to handle a normal, expected traffic load with extra capacity for peak call periods, but they were not designed for times when demand is unusually high. The lines and switches were jammed and people could not get dial tone and had to wait until the demand subsided.

> What happened during the earthquake was that everyone reached for their phones at once. The networks worked perfectly during the aftermath of the quake but they were simply overloaded on both the voice and the data side. Calls could not be made or received, calls were dropped, video taken of damage could not be sent, and SMS messages did not get through.

The difference between wired and wireless network overloading is that in the wireless network the overloading happens when too many people are trying to use the network in a small area. Each cell site is typically made up of three sectors, each covering a 120-degree portion of the surrounding area (see diagram below).



This diagram depicts three cell sites with each site divided into three sectors. Each of the sectors has the same capacity as the others.

Each sector can handle a maximum loading within it. For the sake of simplicity, let's assume that within each sector the maximum number of voice calls that can be handled is 100. A sector's normal traffic load might be thirty calls at the same time, peaking at sixty calls in a single cell sector during busy periods. Good cellular design dictates that reserve capacity be built into each cell sector so that others entering that sector from another have capacity on the new sector and are not disconnected as they move from sector to sector.

The sector becomes overloaded when demand for service exceeds the maximum number of calls that can be processed in that sector, in this case 100, so if there are 120 people within the sector some will not have network access. The way you gain access to the network is that your device (or the network in the case of an incoming call) sends a request on what is typically called the signally channel. This channel is not only used to request a call but also for the network to track the location of the device so it can be found during an inbound call as well as to facilitate the hand-off to the next sector when the phone is moving. In some networks this signaling channel is also used for SMS traffic, which uses some of the capacity of the signaling channel.

If there are too many devices trying to access the network within a cell sector, the signaling channel becomes overloaded and some customers' requests will not even reach the network (this is one reason priority access for public safety is not a viable option). So there are two issues, the total number of calls a sector is capable of handling, and the amount of traffic on the signaling channel. Even if more spectrum is allocated to a cell sector, while the number of calls that can be handled by that sector increases, there is still a finite number the sector is capable of processing and completing.

On the data side, even fewer data sessions per sector are normally supported. In normal usage, data bursts to and from the device will permit more customers to make use of the broadband data side of the system. However, if a number of customers are streaming video up or down, the total number of broadband data users is diminished greatly. Even in normal times we have seen the results of cell site sector overloading. AT&T had this type of problem as the iPhone took off a few years ago and many of its customers started using a lot of data services. It is possible that one sector or multiple cell sites are completely overloaded due to demand but calls can still be made and received a few miles away where the demand is less.

What happened during the earthquake was that everyone reached for their phones at once. The networks worked perfectly during the aftermath of the quake but they were simply overloaded on both the voice and the data side. Calls could not be made or received, calls were dropped, video taken of damage could not be sent, and SMS messages did not get through. No matter how much spectrum we have or how robust the commercial operators build these networks, we will have network overloading during major events.

This is not a new problem. You might recall that during the Oklahoma bombing the radio and TV stations were telling people within the affected areas not to use their phones so the commercial systems could be used to augment the public safety channels. During the earthquake, I am not aware of a single cell site failure so the bottom line is that in this instance, the problems experienced were network overloading and this will never be solved no matter how much spectrum we throw at it and no matter how many more cell sites are built. It is not possible for anyone to build a commercial wired or wireless network that will not reach saturation at some point, due to some type of major incident. The same is true, by the way, with the Internet for all of you who plan to rely on it and store all of your data in the cloud.

One advantage to the commercial wireless networks is that the network operators can do some on-the-fly network management. Especially the newer 3G and 4G networks have tools built in that enable pro-active traffic management by changing antenna patterns to shrink the radius of a cell site, to overlap cell sectors in a given area, and to try to balance the load. However, even with all of this new technology there comes a point where a cell sector, and possibly many cell sectors, will be overloaded and this will happen over and over again. It is more severe during an event such as an earthquake because once the event is over, everyone reaches for their phones at once. During a longer incident, say a hurricane, the traffic does not usually peak as quickly and therefore the networks are generally able to handle the additional traffic.

Hurricane Irene

The other advantage to a natural disaster such as a hurricane is that there is advanced warning. In the case of Irene, you can review all of the press releases from the network operators and see that they were all preparing for the worst. They moved equipment around, made sure batteries and generators were operating and had their maximum capacity, and pre-dispatched people and spare parts to areas where the predictions were for the major damage from the storm.

From all of the reports I have seen, the commercial networks, for the most part, withstood what the hurricane threw at them. There were, according to the FCC's records, a number of outages but they were not network-wide and were limited to cell sites that were damaged or flooded, or where the connection between the site and the network was destroyed. The result was that most of the East Coast was able to use the commercial wireless networks. I have not heard of any network overloads simply because the storm was both predicted and lasted so long in most areas.

The sites that went down went down because of wind damage or flooding, or as mentioned, because the link between the cell site and the network was broken. Today, many cell sites, but not all, have battery back-up and many have both batteries and generators. The number of sites with generators depends in large part on the network. Some networks won't build a major site without a generator, others build out the network with key sites having both batteries and generators, but some sites only have battery back-up. Some sites are equipped with battery back-up and provisioned so that a portable generator can be driven to the site and connected. Some of the smaller picocell sites don't have any back-up power at all and if you have a femtocell in your house or office and you lose power, you will probably lose the picocell as well.

It would not matter if every cell site in the United States had massive generators on them. First of all, generators do not operate underwater (one of the big problems during Katrina). Secondly, even if the generator continues to keep the site up, if the link between the site and the network is down then the site, while on and operating, is not functioning and might as well be off. The network operators do the best they can and are very responsive to restoring sites that go down, but sometimes they have to wait for the wired phone company, the fiber company, or even the power company to restore the link to the site before they can bring it back online. As you know, there are still some people without power in various parts of the East Coast and the power companies are working overtime to restore power.

Conclusions

Two different acts of nature caused incidents resulting in two different types of commercial network issues. During the earthquake, the networks stayed up but were overcrowded, a situation that will be repeated regardless of what we do, and the hurricane saw more spot outages due to power and communications links problems. In both cases these types of problems cannot be fixed by an FCC inquiry or a change in the rules, they will continue to happen. There is no such thing as a network that can withstand overcrowding or wind and flooding.

We have all come to rely on our wireless devices, and these incidents underscore our reliance on them. We have to learn to live with the fact that such disruptions will continue to occur. Mother Nature is to blame, not the network operators. In the meantime, what we can learn from this is to not rely 100% on a single form of communications. For my part, I keep four family radio handhelds with good batteries in them for local conditions within my family, and I have been a licensed amateur radio operator since my teens and our local organization provides emergency communications during disasters. We train and we prepare. Our slogan is that "When all else fails there is Amateur radio." It worked during Katrina, in Haiti, and during the recent tornadoes; I will guarantee you that there were amateur radio operators on the air right after the earthquake and again during the hurricane.

Infrastructure-based communications systems will become overloaded or damaged, that is a fact of life. It is also one reason that the public safety community relies on what is known a simplex, or off-network communications (or peer-to-peer for IT types). If their infrastructure is down they are still able to communicate unit-to-unit no matter where they are, over distances of several miles in most cases. Their networks are designed to support this mode of operation and it is one of the reasons commercial cellular networks are not able to provide the type of communications needed by public safety. They simply cannot afford to be without the ability to communicate so they can continue to be effective during any type of emergency

We rely on our wireless devices but incidents such as these should make us more aware that we might not always be able to communicate with them. It is no one's fault, it is a fact of life we have to learn to live with—part of smart disaster planning should include at least one other form of communications for times such as these.

LTE Support for Mission Critical Voice for Public Safety

06.19.2011 by Andrew M. Seybold

Introduction

LTE or fourth-generation (4G) wireless broadband was designed and implemented primarily as a data over broadband technology. Voice in the form of Voice over IP, which is being designed to implement voice calls in the traditional cellular fashion of dialing a number and completing the call using the LTE network as transport, is being developed. The issue is whether LTE can and will support other types of voice services, specifically Push-To-Talk (PTT) voice and most importantly, PTT off-network, when units are out of coverage of the network or when they need short-range communications in buildings and in other areas where the network does not provide coverage.

The standards for LTE are largely controlled by the 3GPP, an organization made up of hundreds of commercial members including chipset companies, infrastructure vendors, network operators, handset companies, software developers, and others. In order to add mission critical voice requirements to the LTE standard, the Public Safety community must petition the 3GPP for its inclusion AND there must be a number of other members of 3GPP that concur. Once (if) this happens, the amendment to the standard is assigned to a future release of LTE and when that release is being worked on, the amendment will be considered.

> IF LTE broadband can meet both the voice and the data requirements of the first responder community, a single device could be deployed that would provide not only data/video interoperability, but voice interoperability as well. This would be an ideal situation and one that is worth pursing. However, existing narrowband spectrum should not be reallocated for other uses until such time as LTE broadband can and does meet all of the requirements for Public Safety mission critical voice as well as data and video services.

In order for the amendment to the standard to be considered, all of the requirements must be defined and support must be garnered from members of the 3GPP. At present, there is no incentive for network operators that largely drive the direction of 3GPP, to embrace mission critical voice, especially the part of mission critical voice that is of paramount importance to Public Safety: The ability to communicate between devices without having to make use of a network. Commercial network operators are not inclined to agree to this type of voice communications because they won't have control of their customers and the minutes of use cannot be billed to the customer.

Therefore, Public Safety will have a difficult time convincing the 3GPP to address the issue of mission critical voice. If a non-standard workaround can be and is developed, it would mean that the devices used by Public Safety would not be nearly as standard as the devices being envisioned today for data and video, thus the cost of these devices would be considerably higher.

However, voice over LTE will happen. It might take longer than many people believe, and it will certainly be implemented in stages. The first voice over LTE smartphones will be available on commercial networks by the end of this year, and the first PTT LTE devices will be tested. Initially, neither of these voice services will meet all of the voice requirements of the Public Safety community. The first PTT service will probably be PTT over LTE for non-mission critical voice communications that will be bridged to existing narrowband P25 voice systems in order to provide for interoperability between narrowband voice and LTE PTT services.

For those trying to plan upgrades to or expansion of their existing narrowband voice networks, it is possible that voice over LTE, both on and off-network, will eventually be developed to provide all of the voice requirements for mission critical on and off-network services. If there is funding for research and development available from the federal government, the time frame will most likely be shortened. In either case, it will take time to first build out the nationwide broadband network, then it will take time for Public Safety to learn how to incorporate data and video into their everyday incidents and then how to integrate voice over LTE into their systems over time.

It is imperative, therefore, that those making decisions about the existing narrowband voice spectrum now available for Public Safety realize that this process could take many years. The commercial community is deploying its forth generation of wireless technology in thirty years while Public Safety is deploying its second generation of voice (P25) in fifty years. One advantage to Public Safety moving to a commercial standard for the first time is that it can piggyback on the standards developed for the commercial community and follow rather than lead the commercial networks with new and upgraded technologies, features, and functions. When it comes to voice over LTE, some of the requirements may not be relevant to the commercial network operators and vendors, thus the development of this functionality may take longer than functions driven by the commercial network operators.

LTE will be able to provide some of the voice capabilities needed by the Public Safety community. The questions remaining are how long will it take to implement the rest of these requirements, how much will it cost, and whether it is better in the near future to integrate voice and data services in the back-end network but not necessarily over the airlink. There is a lot of work to be done to transition from traditional narrowband voice to voice over LTE, and at this point no one knows how long it will take or even if all of Public Safety's requirements can be fully met on a broadband network.

What Is Mission Critical Voice?

At the moment, there is no "official" definition for mission critical voice; both SAFECOM and NPTSC are in the process of flushing out a number of definitions. But the two below, one developed by Motorola and one by me, are pretty close to what is necessary to provide true mission critical voice communications that are Public Safety grade.

From Motorola http://ezine.motorola.com/government?a=99

"Mission critical voice communication reflects the harsh realities on the emergency management scene: when every other commercial system is down, you expect mission critical voice to be there. The exacting standards for mission critical networks and devices disqualify many nascent technologies and devices in favor of proven, reliable standards. In a mission critical environment, all aspects of a device or technology must achieve interoperability, reliability, coverage, capacity, control and instant, real-time communications."

"In an emergency, mission critical voice remains the single most powerful tool public safety and government agencies have at their disposal to ensure the safety and well-being of first responders and the citizens they protect," says Thomas Quirke, director of Solutions Marketing at Motorola.

And the one I have developed is as follows:

1) Mission critical communications

1. Communications between two or more parties that must be conveyed no matter what the circumstances and it must be delivered in a timely (immediate) manner with clarity.
2. These communications must be 99.999% reliable regardless of the conditions.
3. This applies primarily to voice services but should also include data and video services during emergency situations
4. An emergency is any event or incident where life and/or property is in danger, and includes the safety of the responders.

Mission Critical Voice Today

Today, mission critical voice is provided to the Public Safety community using narrowband voice channels in one of eight different portions of the spectrum. These channels are dedicated to Public Safety and the larger an agency is, the more area it has to cover, or the denser the population in its area of responsibility, the more channels it will have licensed to a given agency, city, county, or region. For a more complete explanation of the way in which mission critical voice communications is used today, please refer to Appendix A.

There are those who are working toward the goal of having the Public Safety broadband nationwide network replace today's mission critical narrowband voice networks. There are many who believe that this will be possible to accomplish in only a few years, while others doubt it can be accomplished within the next decade, and some who believe that voice over broadband won't be able to replace the need for narrowband voice channels beyond a decade, if ever.

The first thing that is required in order to determine whether broadband networks will be able to replace narrowband voice systems for mission critical voice is a common set of system requirements based on the needs of the Public Safety community. Many of those who are proposing the use of broadband for all of the Public Safety community's needs for voice services do not fully understand the vast differences between Public Safety voice and voice over an existing cellular system and how different the requirements are for each. Working toward the goal of voice over broadband is fine but only with the understanding of exactly what is required by the Public Safety community and then developing hardware and software that may be able to meet all of these requirements at some point in time.

Mission Critical Voice Over LTE Impediments

The following is a partial list of the impediments that will present challenges to the development of mission critical voice over LTE including off-network, one-to-many communications:

1) LTE is the fourth-generation standard for wireless broadband and voice over IP (VoIP) will be added for typical cellular phone calls.

1. Neither the existing release nor future releases address the issue of mission critical voice over LTE or the issue of off-network, one-to-many direct voice communications.

2) LTE, while a worldwide standard for broadband services, will not be using a common portion of the spectrum.

1. Today, LTE is being deployed in more than fourteen different portions of the spectrum worldwide with many different off-sets between transmit and receive frequencies and as a time-division-duplex (TDD) technology using the same transmit and receive portions of the spectrum. This makes it even more difficult to develop a standard for off-network communications.

3) Today's LTE devices are controlled by the network and NOT only at the device level.

1. If off-network communications is required, then additional intelligence will have to be built into the devices in order for them to be able to select an LTE voice channel manually or in some other fashion

4) LTE commercial devices have an output power of 200mw as opposed to handheld LMR radios with power levels of 5 watts or more.

1. Therefore, the difference in in-building communications will be substantial unless LTE devices are designed with increased power levels for off-network communications.
2. However, the power levels will have to be different for on-network and off-network voice since higher-powered devices (with the current LTE specifications) will simply shut down a standard LTE network.

5) How many voice channels can be supported by LTE both on and off-network?

1. If LTE is to be used for voice dispatch, it will have to provide multiple, separate one-to-many on-network voice channels in order to replicate existing Public Safety narrowband voice systems.
    1. Many cities and counties make use of multiple dispatch channels as well as city or countywide channels (see appendix A). The number of channels required in major metro areas or large counties could run as high as fifteen to twenty separate dispatch channels. When using off-network voice communications, if it is possible to accomplish this, the number of off-network channels will have to be substantial.
2. In a major incident such as a wild land fire, upwards of seventy discrete one-to-many, off-network voice channels will need to be deployed during the incident.

6) How many voice channels will be available in a given metro area for one-to-many voice communications?

7) What impact will adding PTT and voice communications have on the network's ability to handle data and video at an incident?

1. Most daily incidents will take place in a confined area within a jurisdiction and will usually be covered by only a single cell sector. Therefore, the total bandwidth available for the incident will have to be shared between voice and data/video services. Using Voice over IP, voice must have priority on the system.
    1. Further, if thirty or forty PTT users are registered within a single cell sector, the amount of data/video capability at the incident will be limited because of the

requirement for voice within the same cell sector.

8) What additional infrastructure will need to be added to the Public Safety LTE network in order to implement one-to-many voice services?

1. eMBMS (Enhanced Multimedia Broadcast Services)?
2. Other?

9) Since LTE's transport layer is based on UDP (User Datagram Protocol) rather than TCP/IP, this means that packets that are not delivered or that are delivered with mistakes in them are not re-sent and are basically thrown away.

1. How will LTE's Quality of Service (QoS) and Priority features ensure that
    1. Voice packets have priority over data packets
    2. Voice packets arrive in the proper sequence and with no errors or
    3. The user devices are capable of error correction to ensure intelligible voice being received?

10) How will voice traffic, specifically PTT voice, be routed when a user is out of his/her prime area of operation?

The above list is only a partial list of the issues that must be dealt with and solved prior to LTE being able to support what is defined as one-to-many voice services for Public Safety.

Conclusions

IF LTE broadband can meet both the voice and the data requirements of the first responder community, a single device could be deployed that would provide not only data/video interoperability, but voice interoperability as well. This would be an ideal situation and one that is worth pursing. However, existing narrowband spectrum should not be reallocated for other uses until such time as LTE broadband can and does meet all of the requirements for Public Safety mission critical voice as well as data and video services.

Organizations such as NPSTC are working on defining the specific requirements for voice over LTE for Public Safety and there are those both within the federal government and within the vendor community that believe Public Safety will soon be able to use a single device for both mission critical voice and data on the common LTE broadband system. Others believe that some form of PTT over LTE, perhaps P25 digital PTT, will be able to be used over LTE but in conjunction with existing narrowband P25 voice systems.

Whatever the case proves to be, it is imperative that Public Safety not lose any of its meager spectrum holding for narrowband voice until voice over LTE is proven and readily available. As important as data and video are as new services to the Public Safety community, in the end, voice communications are the most critical form of Public Safety communications and it must remain mission critical, easy to use, and available on a moment's notice. If it is not, Public Safety agencies will not be able to perform their tasks efficiently and will, in fact, place themselves and the public in harm's way.

The most sensible approach for the short term is to work with vendors to develop dual-mode devices capable of LTE data/video services as well as narrowband P25 capabilities on both the 700 MHz and 800-MHz bands currently assigned to and licensed by Public Safety agencies. Such devices should become readily available within the next few years, and while they will still cost more than commercial wireless devices such as smartphones, these devices can and will provide both broadband data/video and voice over P25 using the narrowband channel capabilities. There will still be issues regarding voice interoperability with systems on other portions of the spectrum, but for the next few years there are workarounds that can be implemented to minimize, but not eliminate, the issue of voice interoperability.

LTE may be able to meet all of Public Safety's requirements for fully interoperable voice and data services but that has not been proven yet and I believe if it happens at all it is many years in the future. In the meantime, LTE for data and video should be deployed as quickly as possible, and workaround solutions for interoperable voice should continue to be implemented on a local, area, regional, and statewide basis. To stop the drive for voice interoperability on the existing narrowband voice channels while waiting to determine if LTE can, in fact, be effectively used for both voice and data mission critical applications would be dangerous not only to the first responders but to the people they serve.

Andrew M. Seybold

Appendix A:

Mission Critical Voice Use

Voice channel requirements for Public Safety include the following:

1) One or more one-to-many, on-network voice channels for dispatch.

   1. Dispatch channels must be capable of one-to-many communications since it is imperative that not only the units required for the dispatch are notified but that those in proximity to the incident be made aware of the incident and that the field commanders be aware of the dispatch and the incident as well.
   2. After the dispatch is made, either the units responding are directed to use a different one-to-many, on-network channel for unit coordination or they remain on the primary dispatch channel until the first unit(s) on the scene report the status of the incident.
   3. Usually fire and EMS personnel are dispatched on one set of dispatch channels while police agencies are dispatched on a different set of radio channels.
   4. In large populace and metropolitan areas, there need to be multiple dispatch channels. Normally they are assigned by geographic area within the agency's jurisdiction.
   5. In addition to the dispatch channels, each agency normally has one or more jurisdiction-wide command and control channel for incident coordination.

2) On-scene communications

   1. The first unit arriving on the scene of an incident will give both the dispatcher and the other units responding to an incident a report of the situation as visually observed upon arrival.
      1. This message needs to be heard by ALL of those responding, the dispatcher, and those within the area and/or line officers responsible for manpower and equipment allocations.
      2. In both police and fire incidents, if the incident involves additional responders, the incident is normally assigned to an off-network channel to free up the dispatch channel and to provide on-scene communications for those at the incident. Again, fire and EMS will normally operate on one or more off-network channels while police will operate on others.

3. As the incident grows, additional off-network channels are assigned so each group at the incident has its own working channel. For example, in a hostage situation, the SWAT team may be assigned one discrete channel, uniformed officers on the scene another, detectives yet another, and fire and EMS support yet additional channels.
4. The larger an incident becomes, the more off-network channels need to be assigned.

3) Off-network communications on different channels are a necessity for Public Safety. Oftentimes there are multiple incidents in progress at the same time, separated by some distance, and even more off-network channels are required in the day-to-day operation of Public Safety agencies.

Narrowband Voice Channels Currently Licensed to Public Safety Agencies:

Frequency Band	Type of Radio Channels	Band Shared with other Users?
30-50 MHz shared spectrum (6.3 MHz of spectrum)	Narrowband voice channels	Yes, business, utilities, government others
150-170 MHz shared spectrum (3.6 MHz of spectrum)	Narrowband voice channels	Yes, business, paging, utilities, other
220 MHz channels (only one area of U.S. near Canada)	Narrowband voice channels	No
450-470 MHz shared spectrum (3.7 MHz of spectrum)	Narrowband voice channels	Yes, business, alarm, utilities, paging, local government, others
470-512 MHz (shared TV channels certain areas only)	Narrowband voice channels	Shared with TV station and business radio/wireless mikes
700 MHz narrowband (12 MHz of spectrum)	Narrowband voice/data	No—contiguous spectrum
700 MHz broadband (10 MHz of spectrum)	Broadband data	No—contiguous spectrum
800 MHz narrowband (9.5 MHz of spectrum)	Narrowband voice/data	N0 AFTER rebanding is completed
4.9 GHz broadband (50 MHz of spectrum)	Low-power data	Suited only for local use and does not penetrate buildings

Note: Cleveland, Buffalo, and Detroit are using shared NTIA channels in the 421-430-MHz band
Note: There are a few 220-MHz systems in use in other areas such as Long Beach, CA.

As the chart above illustrates, today's Public Safety mission critical voice channels are spread across seven vastly different portions of the spectrum. It should be noted that except for the 700 and 800-MHz voice allocations, all of the other portions of spectrum allocated to Public Safety are shared with other services. It should also be noted that a radio system operating on the 30-MHz band, 150 MHz, 450 MHz, or 800 MHz will have different coverage capabilities on each;

the higher in the spectrum that you operate a system, the more infrastructure is required to cover the same given geography.

Different types of narrowband voice services and technologies available and in use in the various segments of the spectrum are as follows:

Possible Combinations of Systems that Need to Be Interoperable

Frequency Band	**Analog FM**	**P25 Digital**	**Base to Mobile**	**Repeater**	**Simulcast**	**Trunked**
30-50 MHz	X		X	X	X	
150-174 MHz	X	X	X	X	X	X
220 MHz	X	X		X		X
450-470 MHz	X	X	X	X	X	X
470-512 MHz	X	X	X	X	X	X
700 MHz NB	X	X	X	X	X	X
800 MHz NB	X	X	X	X	X	X

One-to-many voice communications, available on multiple on and off-network channels, is a prime requirement for Public Safety communications but is not a requirement for commercial wireless networks.

Introduction

Three months after the Federal Communications Commission released the National Broadband Plan (NBP), the Public Safety and Homeland Security Bureau finalized *"The Public Safety Nationwide Interoperable Broadband Network: A New Model for Capacity, Performance and Cost"* white paper. The Commission's white paper, which should have been completed before the NBP was released, was requested by public safety and industry leaders five months ago. The paper was developed without meaningful input from the public safety community, and is built on a foundation of assumptions and conjecture.

The cornerstone of the Commission's white paper and the NBP's public safety recommendation is the utilization of 10 megahertz of dedicated 700-MHz band spectrum currently designated by Congress for public safety use. In addition, the Commission believes that public safety must be able to roam on commercial networks with priority access, which supposedly will increase spectrum resources in times of emergency. The Commission's white paper and the NBP recommend the need for 44,000 cell sites based upon three disaster studies that were conducted by the Commission over the last year. Construction of the public safety network would be funded by public funding and commercial auction of the 10MHz of the upper D-Block spectrum.

Unfortunately, the Commission's white paper is built on a weak foundation that is extremely problematic to the public safety community.

1. The Commission makes far too many assumptions and relies on conjecture to develop its misguided policy framework that will put public safety users at risk.

2. The Commission greatly underestimates the current and future capacity needs of public safety when it assumes that 10 MHz of broadband spectrum is adequate for mission-critical high-speed data, high-resolution two-way video conferencing, video monitoring and surveillance at an incident, multi-agency mission-critical IP-based voice communications with push-to-talk services, biometrics, telemedicine, and the thousands of other high-bandwidth applications that will be used by public safety in the near future. While the Commission has acknowledged that consumers will need an additional 500 MHz of spectrum for broadband, in addition to the more than 500 MHz they already have, the Commission assumes that public safety can do it in 10 MHz. In other words, the Commission wrongly assumes that public safety can build a skyscraper on a small piece of land that can only support a single family home.

3. The Commission believes that density of the cell sites makes up for the lack of spectrum capacity and ignores the environmental impact of cell

towers, local and state zoning restrictions, added cost of more backhaul, and the potential for network interference.

4. Public Safety continues to support public – private partnership for broadband deployment. However, the Commission recommends an “incentive based partnership” between public safety and the D Block winner. There is very little information on how this would work leaving public safety skeptical as to how it would be executed and on how it would insure public safety’s needs are meet.

Public Safety Alliance (PSA) takes serious exception with the findings of the Commission’s white paper and we ask the Commission to take immediate action to develop a more comprehensive, independent study of public safety’s capacity needs for mission-critical voice, high-resolution video, high-speed data applications. The study must include public safety practitioners, technicians, and industry experts; it must be able to project the capacity needs of public safety for the next 10 years; it must take into consideration the types of applications that can be used on the network by public safety; and it must provide a solid foundation upon which public safety can build a nationwide broadband network that will meet the needs of our nation’s first responders who put their lives on the line every day to protect and serve the public. Anything less is unacceptable.

The PSA fully supports the independent comments of Andrew Seybold, which provides an accurate and critical analysis of the FCC white paper.[1]

The Fallacy of Assumptions

PSA finds that there are many flawed assumptions and conclusions in the white paper, which could lead to the failure to build the public safety broadband network. Below are some of these flawed assumptions and conclusions:

1. “The 10 megahertz of dedicated spectrum allocated to public safety in the 700 MHz band for broadband communications provides more than the required capacity for day-to-day communications.”

   The Commission recognizes the importance of the 700 MHz D Block because it shares the same LTE band class as the public safety broadband spectrum, but fails to acknowledge the real advantages to public safety of combining these two blocks of spectrum. Unlike commercial providers, a public safety agency has to meet the

[1] Andrew M. Seybold, “Comments on: FCC White Paper The Public Safety Nationwide Interoperable Broadband Network: A New Model for Capacity, Performance and Cost”, FCC Proceeding No. 06-229, filed June 23, 2010.

operational requirements throughout their entire coverage area including at the cell edge where throughput decreases significantly.

Public safety has repeatedly argued that the additional 10 MHz of paired spectrum that would be gained through a D-Block allocation is necessary to ensure reliable operation of the public safety broadband network in the long term. It will be particularly crucial during times of high traffic when additional public safety users from the local area and from agencies coming in from elsewhere all converge at a major incident scene or disaster area.

Since the D-Block spectrum is adjacent to the public safety broadband allocation, it is uniquely positioned to provide the needed additional capacity **throughput for a public safety agency's entire coverage area including the cell edge where throughput decreases significantly**. Any alternative spectrum offered in other bands will be less efficient. Additional components would be required which would increase the cost and reduce performance of broadband devices. Non-adjacent spectrum blocks of the same size as the D Block will not provide as much throughput capacity, since greater efficiency is achieved through spectrum aggregation.

The most significant step that the Commission can take towards ensuring a consistently high level of network performance, reliability, capacity, and coverage across all public safety broadband networks is to recommend that Congress reallocate the Upper 700 MHz D Block to public safety.

2. "…priority access and roaming on the 700 MHz commercial networks is critical to providing adequate capacity in these extreme situations."

   The Commission assumes that commercial networks will be in operation during extreme situations and that there will be sufficient capacity to serve both public safety and consumer traffic. However, it is clear from the experience of public safety agencies around the country that commercial networks are often severely congested during even the most minor situations, including the situation where consumers are using SMS text messages to vote for their American Idol. Priority access to a network that is already congested will not result in meeting the dedicated capacity and transmission speeds needed by public safety users.

3. "The capacity and efficiency of a public safety broadband network will far exceed the expectations…because of the system architecture, density of cell sites, the density of cell sectors per site, network and spectrum management, and the use of new and emerging technologies."

The Commission's plan is built on the assumption that the amount of spectrum does not really matter if enough cell sites can be built producing enough tower density to make do with 10 MHz of existing spectrum. Public safety is concerned that utilizing this approach to solve capacity and interference is not at all a good value. This approach could require up to twice the number of cell sites that would otherwise be required in a regional approach.

The Commission assumes that public safety can make up for the lack of spectrum capacity on the network by adding more cell sites. Unfortunately this simplistic solution, ignores the local, state, and federal regulations such as zoning laws, environmental regulations, and other regulatory hurdles that often impede or stop the build-out of additional cell cites. Additional cell sites will also greatly increase the cost for backhaul, hardening, and ongoing operation and maintenance. Finally, multiple cell sites in a geographic area could lead to dangerous interference and network confusion.

4. The Commission assumes interference and out-of-band-emissions (OOBE) problems are easily solved.

   Public safety will experience interference if the Commission's plan is implemented and there are no attractive solutions. Reducing interference would require deploying up to twice as many cell sites as the public safety approach.

   Current OOBE limits adopted for the public safety broadband system are very inconsistent—they vary dramatically based on whether they were intended to protect the public safety broadband network from the D Block or the public safety narrowband channels from the adjacent commercial 700 MHz blocks.

   The best way to alleviate the OOBE concerns between commercial and public safety entities would be to reallocate the 700 MHz D Block to public safety. Reallocation would eliminate any concerns about interference between the D Block and public safety broadband spectrum.

Misrepresentation of the Facts

"Public safety has a total of 97Mhz of spectrum allocated for use across the RF spectrum with 60MHz of that total available for broadband use. Overall the allocation of spectrum per user for public safety is now 25 times that of commercial providers."

1. Public safety only has 10 MHz of spectrum in the 700 MHz band for mobile broadband. The additional 50 MHz in the 4.9 GHz band does

not penetrate buildings and is not suitable for wide area mobile public safety or commercial mobile broadband services.

2. The Commission allocated 50 MHz in the 4.9 GHz band based on public safety requests for the spectrum to serve “hot spot” types of deployments. This spectrum is suitable for fixed broadband services such as hot spots and point-to-point transmission, but not for jurisdiction-wide coverage.
3. Allocation of spectrum should never be based solely on a per-user calculation. Any credible analysis will also incorporate how the spectrum will be used and how much usage is likely for each user. The per-function use of the spectrum by a public safety user will be, at the very least, 10 times greater than that for the average commercial user. Further, the average application to manage the incident will require much more bandwidth and capacity than merely browsing a web page or texting a friend.

“Priority access and roaming onto commercial bands can provide public safety with far more capacity during periods of greatest need.”

1. Many disaster situations have shown that commercial systems get clogged with drastic increase in demand.
2. Priority access (without pre-emption) on a clogged commercial system will not guarantee public safety access to the capacity it will need.
3. There will be considerable delay in the transmission of data on congested commercial networks even if public safety has priority access.

Conclusion

The Commission studied three tragic moderately sized real disasters in its white paper. However, it failed to utilize data from more extensive real world situations like the attacks in New York on 9/11 or from Hurricane Katrina. The public safety community is left to wonder if anything has been learned from these disasters.

Given the concerns cited by the public safety community, the past failure of the D-Block auction, and the uncertain nature of an economically viable nationwide network fully funded by a commercial provider required to share spectrum, we believe the current public/private partnership model funded by an auction is not in the public’s best interest.

With only 10 MHz of paired spectrum in the 700 MHz Public Safety Broadband Spectrum, public safety network operators could deploy only one 5 MHz x 5 MHz LTE carrier. However, with a D-Block reallocation, public safety broadband networks will be able to operate over one 10 MHz x 10 MHz LTE carrier, which would provide higher peak data rates and increased overall network throughput. The 10 MHz x 10 MHz LTE system would provide superior network performance, as compared to a 5 MHz x 5 MHz system.

Furthermore, reallocating the D Block would provide a more viable option to retain control over the network in public safety hands. Without such control, there is no assurance that public safety will have the reliability and flexibility needed.

A single wireless public safety broadband network containing the D Block and adjacent public safety 700-MHz broadband spectrum is the only logical choice to satisfy the public safety community's wireless broadband spectrum requirements. Primary public safety access is critical, as demonstrated by the failure of the initial D-Block auction. Public safety cannot be relegated to roaming on commercial networks as just another customer.

Public safety strongly supports the bi-partisan bill introduced by Representative Peter King, H.R. 5081, and currently co-sponsored by thirty-five members of the House. We urge Congress to swiftly approve the bill and send it to the President for his signature.

Public Safety, State-Local Government Are United: Reallocate D Block to First Responders

What Are The Differences? You Decide.

CONNECT PUBLIC SAFETY NOW

(Formerly known as "The 4G Coalition")

COALITION SUPPORT INCLUDES:

Cellular Operators, Licensees and Associations:

Sprint Nextel; T-Mobile; Metro-PCS; Cellular South; Rural Cellular Association; Rural Telecommunications Group, Inc. Access Spectrum; Xanadoo Company

WHAT DO THE MEMBERS WANT?

- Re-auction the 10 MHz "D block" for commercial use without any public safety obligations
- Have public safety's mission critical voice communications network spectrum repurposed for broadband data use

WHY DO THEY WANT THIS?

- They want to expand their current spectrum holdings with 700 MHz
- They want to lower their research and development costs for 700 MHz devices through regulatory mandates
- They believe public safety has enough spectrum and can use their narrowband portion for broadband if they want to

THERE IS NO CONNECTION TO PUBLIC SAFETY

They have no real interest in supporting public safety other than suggesting, in concept only, that auction revenue could pay for a public safety network.

Their goal is to obtain spectrum at the expense of public safety. They want the D-block, originally slated for a combined public-private public safety network, to be auctioned for commercial use without any encumbrances or public safety obligations. Its all about business and shareholder value. While there is nothing wrong with businesses pursuing this, it is unacceptable for a coalition to pretend to be something they are not, and stand for something they do not.

Public Safety Alliance
Dedicated to First Responders…First

(Always known as "Public Safety Alliance")

ALLIANCE SUPPORT INCLUDES:

Police, Sheriff and Fire Chiefs Associations
Emergency Medical and Management Associations
Rank-n-File Public Safety Associations
State-Local Govt. and Public Technologists Groups

WHAT DO THE MEMBERS WANT?

- Have 10 MHz "D block" allocated to public safety to create a 20 MHz block of spectrum
- Use spectrum as the foundation for next-generation network with capacity to handle surge demands during any situation
- To finally secure first responders with low cost, next-generation technology and life saving applications

WHY DO WE WANT THIS?

- We recognize that wireless data usage is growing exponentially and will consume the 10 MHz capacity within a couple of years.
- Having contiguous 20 MHz provides surge capacity today and eliminates the need to purchase additional costly equipment and devices in the future
- Public safety needs to control priority over its communications networks

THE ALLIANCE IS PUBLIC SAFETY

The men and women that represent the Public Safety Alliance are made up of sworn officers and dedicated civilian employees of public safety organizations.

We are who we say we are, and we stand for what we believe in. We don't need to create a false front.

WE NEED YOUR SUPPORT,

Please stand with us.

Support Public Safety:
Reallocate D Block to First Responders

FCC Spectrum Plan Based on Faulty Logic

Andrew M. Seyboild, April 21, 2010

Editor's Note: Just as we were preparing this for publication, Representataive Peter King (R-NY) and others introduced the "Broadband for First Responders Act" (HR 5081) which has now been sent into committee. The bill, if passed, will require the FCC to turn over the D Block to public safety. However, simply because there is now a bill in congress does not mean we should let up the pressure. The bill makes no mention of funding to build out the network, but it is a very good start!

The FCC chairman has repeatedly stated that his Commission's actions will be based on data and facts. This may be true, but in the Broadband Plan it submitted to Congress on March 17, the FCC seems to have used its own brand of logic to mold the data to fit its own agenda for public safety.

The FCC and many others believe that broadband systems are the way forward when it comes to wireless spectrum usage. Therefore, it stated in its report to Congress that we need to find the commercial wireless community 500 MHz of additional spectrum over the next ten years—300 MHz of it within the next five years. The same document also stated that public safety's existing 10 MHz of spectrum is sufficient for their use, however, it has told the public safety community that if it is wrong about this it will "find" additional spectrum, but not in the 700-MHz band where public safety's existing 10 MHz of spectrum is located.

The FCC is planning to find additional spectrum (500 MHz) for commercial operators because demand for wireless data access is growing rapidly and is expected to continue to increase at even higher rates. According to Cisco and others, demand for broadband data services over wireless grew by 160 percent in 2009 to a total of 90 petabytes a month (enough data to fill 23 million DVDs). YouTube videos account for 10 percent of today's usage and according to Google, video demand today accounts for 40 percent of all Internet traffic. Video services are predicted to account for 66 percent of all data traffic by 2014.

These numbers clearly show that commercial network operators will have to have more spectrum, use their existing spectrum more efficiently, and manage their network loading to satisfy this immense new demand for data.

At the same time, the FCC is convinced that public safety does not need any more broadband spectrum than has already been allocated and points to empirical data it has collected from network operators, equipment vendors, and the public safety community itself. The data I have seen tells a very different story.

Today, commercial wireless operators have holdings in up to four different portions of the spectrum: 800 MHz, 1900 MHz, 2100 MHz (AWS), and now the 700-MHz band. Both AT&T and Verizon Wireless are licensed to use an average of 91 MHz of spectrum in all of these bands combined. Today they are using some of it for second-generation (2G) voice and slow-speed data services, and the rest for third-generation (3G) voice and broadband data services. The new spectrum they acquired at auction will be for fourth-generation (4G) data, followed by voice services.

Yes, they will need more spectrum in the next five years because of the growing demand for broadband services, but since all of the spectrum that is already licensed to the commercial operators is contiguous and in large chunks that will support 3G networks and that can be upgraded to 4G networks, any and all of the current spectrum can be converted, over time, to provide 4G services. To be more precise, the top two commercial network operators have spectrum holdings in every band that can, over time, be used for 4G services.

The public safety community, on the other hand, has spectrum holdings in the 30 MHz, 150 MHz, 450 MHz, and 800 MHz bands and the spectrum assignments are NOT contiguous or large enough to be combined for 4G broadband services. So while commercial operators will be able to convert their entire spectrum to 4G broadband, public safety will not. Only 21 percent of public safety's total spectrum allocations can be used for broadband.

The chart below shows that most of public safety's spectrum holdings are small slivers of spectrum as opposed to commercial operators' holdings of contiguous spectrum that can be used for both 3G and 4G networks.

Organization	**30 MHz**	**150 MHz**	**450 MHz**	**700 MHz**	**800 MHz**	**1.9 GHz**	**2.1 GHz**	**2.5 GHz**	**Total**	**Broadband**
AT&T	0	0	0	20	25	34	12	0	91	100%
Verizon	0	0	0	32	25	21	13	0	91	100%
T-Mobile	0	0	0	0	0	27	27	0	54	100%
Sprint/Nextel	0	0	0	0	17	36	0	0	53	100%
Clearwire	0	0	0	0	0	0	0	150	150	100%
Public Safety	6.3	3.6	3.7	24	9.5	0	0	0	47.1	21%

Spectrum by Band: Average per network operator in 100 top major markets

Time after time, public safety has proven its need for at least an additional 10 MHz of spectrum with hard facts based on New York's existing 2.5-GHz broadband network as well as the amount of data currently being used in other parts of the nation on the commercial networks. The FCC says it will make sure public safety can spill over or roam on the commercial network when it reaches capacity on its own network, and further, that this roaming or spillover will be provided by the commercial network operators using priority access. However, priority access is not the same as spectrum assigned specifically to public safety. In times of major emergencies, even on a local level, the demand for services comes from both the private and public safety sectors at the same time. While the FCC seems to be convinced that priority access on a 4G network will provide public safety with enough bandwidth, the technology to implement this is untested and theoretical at best.

Some of the best and well documented data concerning public safety broadband usage comes from Motorola, which is a major supplier for both public safety and commercial broadband systems and the acknowledged leader in the public safety sector. According to a presentation Motorola gave to the FCC as recently as April 12 of this year, the FCC's analysis of data traffic is flawed and not based on real-world usage. For example, the FCC's presentation to public safety states that 10 MHz of spectrum (already licensed to public safety) will provide an average uplink speed of 256 Kbps while the Motorola presentation clearly makes the case that the minimum required speed for a tactical decision-enabling video is 1.2 Mbps. Motorola further points out that several agencies already require 1.2 Mbps or higher for public safety quality video transmissions. It is obvious from the FCC's own average uplink speed that a cell sector will not support even one video feed from the field back to a command center. Motorola's document also included pictures representative of the video quality that could be delivered via wireless broadband. Even at 384 Kbps, the video would be Quarter VGA format (320x240 pixels) rather than VGA quality video that requires a minimum of 1.2 Mbps on the uplink or downlink.

And this is only the video part of the equation. It should be noted here that none of the commercial network operators will be deploying their 4G systems in less than 12 MHz (6X6) of spectrum, which means they will be able to occupy a full 5 MHz of spectrum for both the uplink and downlink, while the public safety spectrum would accommodate less than 5 MHz of bandwidth in each direction, especially if the D Block, which is adjacent to the public safety spectrum, was being used by a commercial network operator. Additional, "dead" spectrum is required for a buffer between different systems and must be built into the equation when discussing how much capacity and bandwidth will be available for public safety use.

So now you know why I consider the FCC's decision to be based on faulty logic. But wait! There's more! When public safety responds to the many larger incidents that occur every day, a lot of resources are thrown at them. A bank robbery might mean a response from multiple police personnel including a swat team, the fire department, and at least one EMS vehicle and personnel. The same is true for multiple-vehicle accidents, a gas tanker spill, and the many other incidents that are not considered to be “major” but are normal during a typical day in the life of the public safety community.

Once again, the input to the FCC detailed many of these incidents. A typical response for some might include anywhere from 15 to 50 vehicles and 50 to more than 100 first responders. Resources for these incidents will include full-motion video back to the command center from one or more unit at the scene, video or other large images such as building layouts or schematics down to those at the scene, plus GPS to track the location of personnel, photos of suspects, perhaps fingerprints and other evidence found at the scene, and many other images. While many of these broadband services have not yet been implemented, there is no doubt that they will be, and as the network is deployed, there will be more applications.

Several other points were also missed or neglected by the FCC in its recommendations. The first is that today, all of the broadband data usage is to and from the first responders’ vehicles. As we move toward the broadband network, data requirements will move from the vehicle to the person, just as we have seen them move from the home to the individual as commercial broadband services have become available. This means that there will be double or more the number of devices that need to send and receive data, and that will quickly generate more traffic on the network.

And since most incidents are confined to a single building or street, chances are that the coverage for broadband will be from a single cell sector or two at most. Since wireless broadband is a shared resource, the more people who are congregated within a cell sector, the less data speed and capacity each one will have. Having 20 MHz of spectrum available per cell sector would more than double both the capacity and data speeds that will be available at an incident. The FCC’s rationale is that by making use of commercial network cell sites, first responders will have access not only to their own 10 MHz of spectrum but, on a priority basis, to all of a commercial network operator’s cell sites and public spectrum as well.

Public safety personnel cannot and should not assume that commercial network bandwidth will be available for them. One of the major differences between commercial voice services and public safety voice services today is that commercial customers are subject to network overload and dropped calls. First responders know that when they need to use their radios, the call will go through and be heard by others. The FCC’s answer to this is that 4G technology (LTE) can provide a high priority level for the public safety community. During a large major incident, this additional bandwidth and capacity could perhaps be used for administrative and routine purposes, but all of the information to and from the incident needs to be handled on a public safety-grade system—not a system that is shared with commercial customers.

Cell systems for commercial network operation are designed and built for peak usage times while public safety networks are designed and built for the worst-case scenario. It is not acceptable for public safety responders to have to vie with the general public for available capacity and bandwidth during an incident. If this was a once-a-year occurrence, the general public and commercial network operators might be understanding and willing to cede their access to the first responders, but with only 10 MHz of public safety controlled spectrum, these service interruptions will happen on a daily basis, at least in the top 100 major urban areas.

Why does the Secret Service use two-way radios and why is its spectrum available to this department and no one else on a 24/7 basis everywhere in the United States? The answer is that when they need it, they really need it and they can never be in a position where they would have to share it with anyone else. This is true for the FBI, the DEA, and all of the federal law enforcement agencies. Why does the FCC think it is okay to treat local public safety any differently?

After reviewing other data as well as data provided to the FCC, it is clear to me that if public safety only has access to 10 MHz of broadband spectrum, it will exceed the capacity of its system every day handling normal level 1 responses, meaning it would need to use commercial spectrum for each and every one of these incidents.

The FCC does not seem to think that demand for wireless broadband services will grow in the public safety sector as well as in the private sector. It acknowledges the rapid growth in the private sector but states that the first responders have not demonstrated that they will experience the same type of growth. But there is no way to "demonstrate" this kind of growth until the first responder community has the types of devices and wealth of applications that are available to commercial customers today. Once its network is being built, public safety will begin expanding its use of broadband and the number of applications and services will skyrocket in the same way it has in the private sector. Even so, for now, the FCC seems determined to base its assumption that 10 MHz of spectrum is enough on today's limited broadband usage, which does not represent the highest and best use of broadband data for public safety.

Additional numbers from Motorola for uplink and downlink capacities and speeds are also provided in its presentation to the FCC and it is important to point out once again that figures for speeds and capacity per cell sector are the maximum possible for a single user within a specific cell sector. As more users enter the sector, the data speeds for each will diminish, and if a number of streaming videos are being sent back from the field or down to those in the field, the capacity is eaten up in a hurry and data speeds will suffer accordingly.

Motorola predicts that using 10 MHz of spectrum, the maximum data speed per sector from the field will be 3.5 Mbps, and down to field devices will be 8.4 Mbps. However, if public safety has access to 20 MHz of spectrum, speed and capacity per cell sector more than double. The uplink becomes 8.0 Mbps and the downlink 17.7 Mbps, providing public safety operated capacity that should be sufficient bandwidth for both level 1 and 2 incidents (but would need to be augmented for level 3 or higher incidents).

Conclusions

Ever since 9/11 and Katrina, attention has been drawn to the fact that first responders cannot always communicate with each other. Units from one department might have radios on one portion of the spectrum while adjacent units might be on a totally different portion. This came to be because over past 30 years, each time the FCC opened up more spectrum for wireless communications, public safety was given another sliver of spectrum in the new band and never enough to consolidate its communications into a single band segment.

Over the years, public safety has struggled with the issue of interoperability and has had to be creative in working around the problems. One way the problem was partially resolved on their voice services was to install two or more radios in each vehicle so they could communicate with neighboring departments. Using this approach, the investment in radio equipment can reach multi-thousands of dollars per vehicle. Compare these costs and lack of flexibility with today's smartphones that cost less than $200 each, many of which can make and receive calls across the United States and to almost anywhere in the world. These same smartphones provide access to thousands of applications and full access to the Internet. The observation that criminals have better communications capabilities than law enforcement has never been more true than today. Even today's teenagers have wireless devices with more capabilities than first responders have.

Since 9/11, the federal government in general and the FCC in particular have pledged time and again to fix the communications issues faced by the public safety community on a daily basis. Today, ten years later, what is being offered up is once again too little, and if the D Block is put out for auction and developed by a commercial network operator, it won't be too many years before the public safety community will once again have to return to the FCC and beg for additional broadband spectrum.

Public safety is about safeguarding life and property by responding to crime, fires, and medical emergencies, and first responders' communications systems MUST be able to provide both the voice and the data services they need to do their job more effectively. The FCC and congress have it within their power to make sure that this time around they provide the tools to solve many of the interoperability issues that have been facing public safety for more than 30 years.

Public safety communications require two different types of communications services: one for voice and one to exchange digital information, including video, in real time. The commercial networks cannot provide the types of voice services that are needed, and they can only provide the data side of the equation as part of their own commercial data services. Therefore, the public safety community needs its own broadband spectrum and it needs more than the 10 MHz now allotted.

The public safety community and the commercial sector have already begun working together to form a variety of public/private partnerships and as the public safety networks begin to be built, these partnerships will provide the best of both worlds—without the FCC's involvement. The two communities have come together to make it happen and they will, but congress and the FCC must reallocate the D Block to the public safety community today. Public safety has been short changed over and over again when it comes to spectrum allocations. It's time to do the right thing!

Andrew M. Seybold

About Andrew M. Seybold

http://andrewseybold.com

Andrew M. Seybold, CEO and Principal Analyst of Andrew Seybold, Inc., is one of the most respected and influential analysts in the wireless industry today. For more than twenty-five years, he has served the industry and shaped initiatives for world leaders of the wireless industry, including Verizon, Nokia, AT&T, Motorola, and Qualcomm. His firm has provided wireless consulting and education services for startups to Fortune 1000 companies such as Dow Chemical, Ford Motor Company, and Microsoft.

Andy is one of the few individuals in the industry who sees the lines beginning to blur between commercial networks and private mobile radio, between broadband and narrowband technologies and between the IT department and the radio shop. Whether you agree with him or not, having experience in all of these areas, Andy has a unique perspective that deserves listening to.

Andrew Seybold has consulted to some of the industry's most talented and successful entrepreneurs. He was a key consultant to a number of companies that introduced products and services that have had a significant impact on wireless including Research In Motion's popular BlackBerry, Hewlett-Packard's first handheld device, first two-way pager, Good Technologies' first products, and AT&T's push-to-talk offering. He also introduced RadioMail to Dell for the first-ever notebook wireless email offering. He has served on the Motorola Research Visionary Board, IBM's Mobile Computing Advisory Board, and a number of other prestigious advisory boards. Mr. Seybold is a Fellow in the Radio Club of America in recognition of his contributions to the wireless industry, he co-founded and served as a board member of the Personal Computing and Communications Association (PCCA), and he currently serves on the board of CommNexus San Diego.

Andrew Seybold's *Outlook for Mobile Computing* newsletter and his *Andrew Seybold/Forbes Wireless Outlook* newsletter were must-reads and today his *COMMENTARY* is arguably the most widely read e-newsletter among executives of leading wireless network operators. He co-founded Andrew Seybold Wireless University in 1995, which has been attended by thousands of industry professionals and continues to be the only in-depth educational program of its kind in the wireless industry. As a trusted authority on wireless technology and business issues, Mr. Seybold has been featured in the *Wall Street Journal*. He is the author of *Using Wireless Communications in Business* and several other books, and contributes regularly to *Mobile Enterprise Magazine*, *FierceWireless* and *FierceContent*, and *Wireless Week*.

Andrew Seybold is among the wireless industry's foremost speakers and is recognized worldwide for his keen perspective and track record for accurately predicting trends in mobile technology and convergence and is a featured speaker at major industry and customer events and conferences.

June 2, 2011

Public Safety Voice Interoperability

Some in Congress and on the House Energy and Commerce Committee are pointing to a March 18, 2011 memo from the Congressional Research Service (CRS)[1] to assert that the Public Safety Community has wasted more than $13 billion in federal grants for radio communications systems since 2001. In reality, the grants have totaled less than $4 billion and they have, in fact, provided for a higher level of Public Safety interoperability than ever before. In order to fully understand the impact of these grants, it is important to understand the many and varied issues that must be addressed if the ultimate goal of nationwide interoperability is to be achieved for both voice and data services for Public Safety.

Interoperability between various Public Safety agencies had been an issue long before it was brought to public attention during 9/11, Katrina, and other disasters. Articles dating back several decades have pointed out both the need and the issues that must be overcome in order to provide the Public Safety community with interoperable voice and data.[2] Indeed, Public Safety and the Big 7 state and local government associations initially secured the 24 MHz derived from digital TV transition in the wake of the communications failures first responders experienced at the site of the domestic terrorist bombing of the Alfred Murrah building in Oklahoma City in 1994. At that site, firefighters and police officers conducting search and rescue could not speak to each other on their radios within different floors of the building and had to resort to talking to dueling command centers set up outside the site, and couriers running back and forth between the two command centers.

Three major factors have significantly hindered Public Safety's efforts to achieve mission-critical voice interoperability:

1) Public Safety's currently allocated spectrum is in small segments spread out over at least seven different portions of the radio spectrum.
2) Because this spectrum has been in use by Public Safety for many years, interoperability must start at the local level, then the regional, state, regional interstate level, and finally at the national level (and at international borders as well).
    a. Most of the money expended to date has resulted in better interoperability on a local, regional, and state level, interstate regional, and on international borders, but because of the lack of enough spectrum in any given FCC allocation, this process is slow, tedious, and expensive.
    b. The Public Safety broadband network will be built on greenfield, that is, unused spectrum. Therefore, it will be possible to design and implement this new network as a fully interoperable network from the beginning, something that has never before been possible for the Public Safety community.

3) Within each portion of the allocated spectrum, different Public Safety departments make use of different types of radios and radio configurations to meet their own individual coverage requirements.

[1] Congressional Research Service, Memorandum to Congressional Distribution, March 18, 2011 from Linda K. Moore

[2] Volume 1, No. 5, December 1980, Andrew Seybold's Report on Mobile Emergency Communications. A Limited Natural Resource

The main reason for a lack of Public Safety voice interoperability is the fact that while the FCC has continued to allocate more spectrum over the years for use by the Public Safety community, these new allocations have been in very different portions of the spectrum. Today, Public Safety voice communications are authorized in small segments of the spectrum from 30 MHz up to 800 MHz, and except for the spectrum in the 700 and 800-MHz bands, the Public Safety channels are comingled with channels used by business, taxi services, truckers, paging services, and others. In short, there has never been an allocation of enough spectrum in a common radio band to permit all of the various Public Safety agencies to migrate to a single portion of the spectrum and be able to interoperate between all agencies.

Frequency Band	Type of Radio Channels	Band Shared with other Users?
30-50 MHz shared spectrum (6.3 MHz of spectrum)	Narrowband voice channels	Yes, business, utilities, government others
150-170 MHz shared spectrum (3.6 MHz of spectrum)	Narrowband voice channels	Yes, business, paging, utilities, other
220 MHz channels (only one area of U.S. near Canada)	Narrowband voice channels	No
450-470 MHz shared spectrum (3.7 MHz of spectrum)	Narrowband voice channels	Yes, business, alarm, utilities, paging, local government, others
470-512 MHz (shared TV channels certain areas only)	Narrowband voice channels	Shared with TV station and business radio/wireless mikes
700 MHz narrowband (12 MHz of spectrum)	Narrowband voice/data	No—contiguous spectrum
700 MHz broadband (10 MHz of spectrum)	Broadband data	No—contiguous spectrum
800 MHz narrowband (9.5 MHz of spectrum)	Narrowband voice/data	N0 AFTER rebanding is completed
4.9 GHz broadband (50 MHz of spectrum)	Low-power data	Suited only for local use and does not penetrate buildings

Note: Cleveland, Buffalo, and Detroit are using shared NTIA channels in the 421-430 MHz band
Note: There are a few 220 MHz systems in use in other areas such as Long Beach, CA.

As the chart above illustrates, today's Public Safety mission-critical voice channels are spread across seven vastly different portions of the spectrum. It should be noted that except for the 700 and 800-MHz voice allocations, all of the other portions of spectrum allocated to Public Safety are shared with other services. It should also be noted that a radio system operating on the 30-MHz band, 150 MHz, 450 MHz, or 800 MHz will have different coverage capabilities on each; the higher in the spectrum that you operate a system, the more infrastructure is required to cover the same given geography.

When those outside the Public Safety community look at the spectrum allocations already made, they oftentimes do not take into account that the 4.9-GHz spectrum (50 MHz) is not suited for wide-area broadband service. In reality, it is designated for low-power, local communications just as today's unlicensed Wi-Fi bands are allocated for citizens' use. The average coverage of a single 4.9-GHz access point is 300 feet or less, and in most systems today, this spectrum is used for point-to-point communications for video transmissions from fixed-location cameras, or for on-scene local broadband services. This spectrum is not available or useful for Public Safety as part of the nationwide broadband network that is being planned to provide wide-area coverage across the nation.

Today, in many urban areas there are not enough radio channels in a given portion of the allocated spectrum to meet the requirements of Public Safety. Radio signals do not stop at city, county, or state (or international) boundaries, therefore the channels in use in a given area must be coordinated with adjacent users to prevent or minimize interference between systems. In many areas this means, for example, that the police departments will operate in the 450-MHz portion of the spectrum while fire and emergency medical services (EMS) units will operate in the 150-MHz portion of the spectrum. Providing interoperability between police, EMS, and fire in these areas requires either specialized equipment in the dispatch centers to patch channels together or the installation of two or more radios in each vehicle; which is an expensive and ineffective method of obtaining interoperability between systems.

If Public Safety had been allocated sufficient spectrum in any one of these bands to satisfy the number of radio channels required for true nationwide interoperability, the result would have been twofold:

1) We would, today, have a truly interoperable voice system nationwide.
2) The cost of Public Safety radio equipment would be at least 50% less than what it is today because it could have been built to operate on a single portion of the spectrum, providing[3] economies of scale and reducing per unit price for Public Safety radios. Today, equipment vendors must build radios for a specific portion of the spectrum, and therefore the quantities they produce for each portion of the spectrum are less.

Other Factors Hindering Mission-Critical Voice Interoperability

Because the narrowband voice spectrum is already heavily used, nationwide interoperability cannot be achieved until it is first made available on a local, regional, and then statewide basis. Much of the funding that has been granted to Public Safety since 2001 has in fact resulted in better regional and statewide interoperability. From 2001 until today, the number of new regional and statewide systems constructed and operational has grown rapidly as the various jurisdictions have sought out their own ways of providing mission-critical voice interoperability.

For example, in California, technology advances have provided fire service with the ability to purchase and install radios capable of more than 300 channels in the 150-MHz band. There is a standard plan in place so that most of the fire departments can and do have interoperability not only between city, county, and state fire units, but also with federal government fire units. However, in major cities such as San Diego, Los Angeles, and San Francisco, there are not enough of these channels to provide for day-to-day fire operations, so fire departments are operating on other portions of the spectrum. During major incidents, agencies responding from out of the area are not able to directly communicate with fire equipment from the large cities without either a second radio in each vehicle or some other form of non-automatic channel sharing equipment.

Many regions have built and installed regional radio systems that are used as interagency communications systems during mutual aid situations. Many of these serve as overlay systems since very few have the channel capacity to serve all of the various local entities. This also requires multiple radios in each vehicle. Several states such as Wyoming, Florida, Vermont, Montana and others have recently built or are in the process of building statewide interoperable mission-critical voice systems in

[3] Tetra radio prices in Europe are approximately 50% of P25 prices in the United States because they are on a common portion of the spectrum and one radio can be built and shipped to all European Countries

order to provide statewide interoperability, but in many cases, these systems augment rather than replace the local systems that are still needed on a daily basis to meet the capacity requirements of each local Public Safety agency.

In a recent memorandum from the Congressional Research Service (CRS)[4] dated March 18, 2011, the data used as a baseline was taken from a survey conducted by the National Emergency Management Association (NEMA).[5] This report was, in fact, based on Emergency Management Association directors' estimates of funds thought at the time to be necessary for states to achieve full statewide interoperability and did not, as portrayed in the CRS report, reflect actual amounts of funding received by the states and local agencies. Further, specific grant programs put requirements on accessing the funds that led to an emphasis on local, regional, and statewide interoperability (as opposed to nationwide), and there were conflicting requirements among and between grant programs causing a lack of greater interoperability.

When working toward the goal of both voice and data interoperability as is the desire of the Public Safety community, it should be stated again that trying to provide interoperable voice services when the agencies are already using spectrum spread out over seven different portions of the spectrum and on which, today, during peak hours, there is already severe network congestion that must be approached from a local, then regional, then statewide basis. However, the opportunity, with the 700-MHz broadband network is to design and implement it on spectrum that is unused, therefore, the network can be constructed from the ground up based on the requirement for nationwide interoperability.

Different Types of Systems

In addition to the shortage of radio channels in any given portion of the allocated Public Safety narrowband spectrum, there is yet another issue that makes mission-critical voice interoperability even more difficult. Namely, over the years, each local city, county, and region has built out different types of radio systems using differing technologies. Therefore, even two agencies in the same geographic area operating within the same portion of the spectrum are not always able to communicate with each other. Mission-critical voice communications systems, today, make use of two very different air interfaces. Many are still using the 30-year-old voice technology referred to as analog or FM voice communications. Newer systems have moved to the digital voice standard known as P25 or APCO project 25, which is a standard for digital voice systems. However, even within these two different types of voice systems, there are many variations of how they are deployed. Small rural areas might use a simple radio base station and radios in vehicles. Larger departments might elect to repeat all of the traffic on a given channel using repeater stations, while others have tied a number of repeaters together in what are called simulcast systems. Still others are grouping between five and twenty radio channels together into what is known as a trunked radio system. Not many of these radio systems are compatible with the other types, and, in many areas, the common way to provide interoperable voice communications is to use unit-to-unit, direct, or off-network voice channels so those on the scene of an incident can communicate with each other (provided they are all operating in the same portion of the spectrum).

The chart below reflects the complexities of working toward the goal of providing full interoperable mission-critical voice communications. As it shows, there are many variables that must be considered,

[4]Congressional Research Service, Memorandum to Congressional Distribution, March 18, 2011 from Linda K. Moore

[5] Letter from NEMA to CRS: http://www.psafirst.org/uploads/documents/CRS_Letter_FINAL_05_27_11.pdf

and the grants have been provided on a city, county, regional, or state basis with no substantial coordination between grants or agencies receiving the grants. The reality is that the grant funds already provided to Public Safety have advanced the state of interoperability with an emphasis on local-to-statewide interoperability, and so only achieved on a local, regional, and statewide basis.

Possible Combinations of Systems that need to be Interoperable:

Frequency Band	Analog FM	P25 Digital	Base to Mobile	Repeater	Simulcast	Trunked
30-50 MHz	X		X	X	X	
150-174 MHz	X	X	X	X	X	X
220 MHz	X	X		X		X
450-470 MHz	X	X	X	X	X	X
470-512 MHz	X	X	X	X	X	X
700 MHz NB	X	X	X	X	X	X
800 MHz NB	X	X	X	X	X	X

Conclusions

Given (1) the number of different portions of the spectrum in use today for Public Safety mission-critical voice communications, (2) the insufficient amounts of spectrum within each portion of spectrum provided to Public Safety, (3) the multiple types of systems in use within each portion of spectrum and throughout all of the different portions, and (4) the focus on interoperability for mission-critical voice on local, then regional, then statewide, and only recently on a nationwide level, the funds provided to Public Safety have been used wisely and have achieved much improved interoperability within and among voice systems in most localities in the United States.

One reason Public Safety must have enough contiguous spectrum on a nationwide basis for broadband services is to make sure that systems being built adhere to nationwide standards, use the same technology, adhere to the same system design and, therefore, provide for full interoperability from the very beginning. Public Safety can never again be placed in the position it has been in over the last thirty or more years where spectrum is not contiguous, there is not enough to handle the demands in major metropolitan areas, and there is a lack of financial resources to build the nationwide interoperable broadband network that will, for the first time, provide Public Safety with the resources it needs to accomplish the goal of true interoperability while realizing the cost savings of using a worldwide air interface standard (LTE) to provide Public Safety with economies of scale for the first time.

Public Safety needs the D Block spectrum and it needs federal funding in order to accomplish this goal. If enough spectrum is not made available this time, or if funding is lacking, the only option is to duplicate the mistakes that have resulted in the lack of nationwide interoperable voice and the problem and issues described above.

The Public Safety community has neither wasted the grants allocated since 2001, nor wasted any of the valuable and very limited spectrum provided. The Public Safety community has accomplished much with the little it has had to work with over the years. Today, more regions of the country have interoperable mission-critical voice communications than ever before, but full nationwide mission-critical voice interoperability is not achievable over the course of the next decade or two given the multitude of spectrum allocations, the differences in technologies being deployed, and the lack of a nationwide long-term plan.

We also believe that given enough broadband spectrum (20 MHz) and funding, Public Safety can and will build out a nationwide, mission-critical broadband network that will provide the level of interoperability needed on a daily basis for data and video services. Over time, this network will serve as a model to solve the nationwide voice interoperability issues that remain.

ACKNOWLEDGEMENTS

The National Telecommunications and Information Administration (NTIA) would like to thank the Federal agencies who submitted agency-strategic spectrum plans which provided the foundation for this Federal Strategic Spectrum Plan as well as their outstanding cooperation in clarifying information and reviewing drafts. In addition, the Strategic Planning Division acknowledges the contributions from the Division Chiefs and staff of other Office of Spectrum Management Divisions, as well as from the NTIA Associate Administrator for Policy Analysis and Development (OPAD) and the staff of OPAD.

TABLE OF CONTENTS

I. OVERVIEW

A. The Presidential Mandate

Today, wireless technologies are essential in supporting Federal agency missions crucial to the nation and enabling commercial and non-Federal public safety operations that support economic growth and safeguard lives and property. As changing government missions increase demands for mobility and agility, and private sector uses continue to expand, spectrum's role as a critical asset intensifies. To ensure that United States' spectrum policy for the 21st Century continues to harness fully the power of the airwaves to meet Federal mission requirements and to enhance prosperity, President George W. Bush established the Spectrum Policy Initiative (Presidential Initiative) in 2003.[1] The goal is a U.S. spectrum policy for the 21st Century that will foster economic growth; ensure our national and homeland security; maintain U.S. global leadership in communications technology and services; and satisfy other vital U.S. needs in areas such as public safety, scientific research, Federal transportation infrastructure, and law enforcement.

B. The Federal Response

The Federal Strategic Spectrum Plan (Federal Plan) is an important component of the *Presidential Initiative*. In a 2004 Executive Memorandum (Appendix A), the President directed Federal agencies to formulate within one year agency-specific strategic spectrum plans ("agency plans") that include: (1) "spectrum requirements … for future technologies or services," (2) "the planned uses of new technologies or expanded services requiring spectrum," and (3) "suggested spectrum efficient approaches to meeting identified spectrum requirements." The 2004 Executive Memorandum also required that the Department of Homeland Security (DHS), through consultation with other Federal, state and local agencies, develop a Spectrum Needs Plan "to address issues related to communications spectrum used by the public safety community, as well as the continuity of Government operations."[2] The Federal Plan thus incorporates these two additional key elements.

C. The Federal Needs

Fifteen Federal agencies submitted agency strategic spectrum plans to the National Telecommunications and Information Administration (NTIA) in November 2005 for inclusion in the Federal Plan.[3] As directed by the President, NTIA integrated the agency plans and the DHS

[2] Presidential Determination: Memorandum for the Heads of Executive Departments and Agencies, *Improving Spectrum Management for the 21st Century*, 40 WEEKLY COMP. PRES. DOC. 2875 (Nov. 30, 2004), *available at* http://www.whitehouse.gov/news/releases/2004/11/20041130-8.html (hereinafter "2004 Executive Memorandum"), attached as Appendix A.

[3] In response to the 2004 Executive Memorandum, the following agencies submitted agency-specific plans in November 2005: the Departments of Agriculture, Commerce, Defense, Energy, Homeland Security, Interior, Justice, State, Transportation, Treasury, and Veterans Affairs; and the United States Postal Service; the Broadcasting Board of Governors; the National Aeronautics and Space Administration; and the National Science Foundation.

Spectrum Needs Plan into a Federal Strategic Spectrum Plan that provides the foundation for a national strategic vision to meet critical future spectrum needs. This foundation supports NTIA's goal of changing the current spectrum management system into a new model. This new and evolving spectrum management system will 1) enable more efficient and effective use of this vital resource; and, 2) where feasible and appropriate, increasingly allow dynamic access to spectrum.

Appendix B to this document is organized as follows: (1) B-1 provides a comprehensive description of current Federal spectrum use and future spectrum requirements of the 15 Federal agencies, by radio service, frequency band, and spectrum-supported systems; (2) B-2 addresses public safety spectrum requirements; (3) B-3 discusses new technologies; and (4) B-4 contains summaries of the agency-specific strategic spectrum plans.

D. <u>The National Response</u>

The President directed that NTIA consult with the Federal Communications Commission (FCC) on the creation of a National Strategic Spectrum Plan (National Plan) that will provide a basis for meeting future Federal and private sector radio-frequency needs.[4] This National Plan will address spectrum requirements for essential Federal missions, including national and homeland security, critical infrastructure, transportation, law enforcement; state, local and tribal public safety spectrum needs; and requirements of non-Federal entities for spectrum to support new services and systems.[5]

NTIA initiates in this Federal Plan a strategy to address the diverse mission-driven needs of the Federal agencies as well as the President's broadband goals and protection of lives and property. This strategy is needed to support Federal missions and the spectrum-dependent systems upon which they rely, while at the same time fostering the commercial systems that underpin the nation's economic growth and technological innovation. This unified strategy must ensure that Federal spectrum-based systems possess the necessary capabilities, including speed and mobility, that 21st Century defense, homeland security, law enforcement, and other priority undertakings demand.

This initial Federal Plan recognizes that Federal agency missions will continue to rely on the use of radio frequencies for the long-term. The agencies' plans indicate a future need for greater, dynamically available data throughput and mobility, often requiring additional spectrum or significant advances in technology. Recognizing that Federal and non-Federal spectrum requirements, much of which are below 5 GHz, will continue to grow, new methods must be

---

DHS submitted a DHS agency-specific strategic spectrum plan, as well as a separate Coast Guard plan. In addition, DHS completed a Spectrum Needs Plan with a Continuity of Government operations plan (COG Annex) attached.

[4] Jurisdiction over spectrum management in the United States is divided between NTIA and the FCC. NTIA manages Federal spectrum uses for agency missions such as defense, homeland security, and science. The FCC manages all non-Federal spectrum uses, including commercial wireless communications and state and local public safety. There are also many bands which have shared Federal and non-Federal jurisdiction. *See generally*, National Telecommunications and Information Administration, U.S. Dep't of Commerce, *Spectrum Policy for the 21st Century – The President's Spectrum Policy Initiative: Report 1* (2004) (Report 1), *available at* http://www.ntia.doc.gov/reports/specpolini/presspecpolini_report1_06242004.htm.

[5] *See supra* note 2, at 1.

established to enable more use in the same amount of spectrum space. These requirements necessitate a new, evolutionary model for spectrum management, one that will encourage and facilitate spectrum efficient and effective operations and will meet the need to rapidly exploit the various aspects of spectrum operations, for example, dimensions of frequency, time and location. Ultimately, this model will provide the means to meet the increasing demand and, where appropriate, to assure dynamic spectrum access to bandwidth, wherever required, whenever required. This new spectrum management model will provide Federal agencies with the bandwidth and agility the Federal agencies identified as requirements in their agency plans, while at the same time ensuring access to spectrum for private sector growth and innovation.

This Federal Plan further recognizes that Federal agencies will need access to up-to-date, low cost, interoperable, and spectrally efficient technology, solutions that may only be found in commercial services. Meeting these needs will require greater coordination and cooperation among Federal agencies, the NTIA, the FCC, state and local public safety entities and private sector spectrum users and technology innovators.

II. TODAY'S SPECTRUM ENVIRONMENT

Sixty-nine Federal agencies and departments further their missions by using radio frequency spectrum for communications, navigation, broadcasting and other purposes. The radio-frequency spectrum is allocated to specific radio services, operating in specified frequency bands, and subject to technical and service rules. The Federal agencies use over 40 specific radio services and their frequency assignments are recorded in the Government Master File maintained by NTIA. These frequency assignments are coordinated via a collaborative Executive Branch review. The FCC licenses non-Federal spectrum use through a public process.

The current spectrum management system at times lacks the flexibility to rapidly accommodate new operational requirements and innovative technologies. The *Presidential Initiative* and ongoing NTIA efforts will enable the existing Federal agency spectrum management system to be more responsive to Federal agency needs. For example, NTIA is implementing extensive information technology (IT) improvements that will streamline the process of obtaining spectrum authorizations and improve access to information concerning Federal agency spectrum use. To the extent possible, obtaining frequency authorizations and coordination among Federal agency systems, and between Federal agency and non-Federal agency systems, will be automated. Several Federal agencies already share frequencies and networks.[6] Some Federal agencies also share facilities and frequencies with state and local entities. Many Federal agencies have revamped and centralized their spectrum management functions, integrating them with their agency's strategic and capital planning processes. In some Federal agencies, strategic spectrum planning is encompassed within the agency's IT activities. Further details on this spectrum management evolution are discussed in Section IV.

[6] For example, USDA runs the National Interagency Fire Center, where emergency supplies, including 8000 land mobile radios, can be used during emergencies wherever they are needed. Treasury operates the "Federal Common," an interoperable frequency assignment which can be shared among all Federal agencies for law enforcement, as well as in coordination with State and local police in emergencies.

III. FUTURE FEDERAL SPECTRUM REQUIREMENTS

A. More Data/ Higher Speeds

1. Overall. Federal agencies have identified a widespread demand for greater data throughput, which often translates into a need for more bandwidth. The agencies underscore a heightened need for wireless broadband applications. For example, DOD projects a substantial, but not yet quantified, requirement for broadband communications-on-the-move. DOD envisions an IP-based flexible, ad-hoc mobile network providing constant connectivity and situational awareness.[7] Faced with increased complexity in crime fighting, DOJ forecasts increased demand for new spectrum-dependent technologies and systems. These requirements may mean wider operating bandwidths and/or spectrum access in higher frequency bands, although most requirements for mobile communications focus on use of spectrum below 5 GHz. Some Federal agencies project increases in the use of wireless broadband access for desktop and mobile computers and for public safety broadband applications.

2. Public Safety. The DHS Spectrum Needs Plan outlines the utility of broadband in a number of public safety scenarios.[8] These range from fire services situational awareness to medical high-speed resolution video transmission, to mobile surveillance emergency response video and images. The Spectrum Needs Plan recommends that NTIA, the FCC and DHS study the use of additional spectrum below 1 GHz for public safety broadband applications.

3. Unmanned Systems. Agencies foresee more unmanned systems applied in military, law enforcement and public safety missions. Unmanned aerial and ground systems often require a number of frequencies for functions ranging from control of the vehicle to communications relay and mission functionality (*e.g.*, sensor data transfer, weapons functions and situational awareness). Compression techniques may assist in reducing the amount of bandwidth needed for some data links. Nevertheless, agencies project substantial demand for spectrum for unmanned vehicles, with large bandwidths necessary for data transfer.

B. Satellite and Space Services

1. Increased Demand for Satellite Capacity. Agencies, such as DOD, project an increased demand for satellite capacity for defense, backup for disaster relief and remote area communications. In the past decade, commercial satellite service providers have often met such requirements. Consolidation in the commercial satellite industry could affect the future availability of such services. If commercial satellite capacity is insufficient to meet agency missions, additional Federal satellite systems may be required, along with additional spectrum allocations. Also, current regulatory mechanisms do not automatically provide Federal use of

---

[7] "Situational awareness" with respect to communications enables devices and personnel to have accurate and up-to-date information concerning their operational environment.

[8] The DHS Spectrum Needs Plan addresses state, local and tribal public safety needs. The COG Annex addresses continuity of government operations requirements. In addition, agencies have commented on emergency preparedness and continuity of Government operations issues in their agency-specific plans.

fixed-satellite earth stations in conjunction with commercial satellites with the same regulatory status as commercial users for purposes of protection from interference.[9]

2. Global Positioning System (GPS). DOD developed and operates GPS, a satellite constellation that provides radionavigation worldwide supporting its military aviation, maritime and terrestrial operations. The civilian community now uses GPS tracking and direction-finding extensively in civil aviation, automobiles, cell phones and other applications. Continued growth in use of GPS-enabled devices will be facilitated by the additional frequencies allocated to the radionavigation satellite service at the World Radiocommunication Conference in 2000 (WRC-2000). As the full civil potential of GPS services and its augmentations are realized, the demand for services provided by other Federal radionavigation systems is expected to decrease.

3. Remote Sensing Operations.

*a) Meteorological Satellite (MetSat) Service***.** The Department of Commerce, National Oceanographic and Atmospheric Administration (NOAA), uses satellites to collect information about weather and conditions on the Earth, supporting a variety of economic interests in addition to disaster relief operations. NOAA projects additional spectrum needs for MetSat data transmission, passive sensing, radar, telemetry links for control and programming of autonomous vehicles and for marine and wildlife tracking.

b) Climatic research applications. The Department of Interior, United States Geological Survey and NASA use active and passive sensing satellites for research into a variety of areas including earthquakes, volcanoes and climate modeling. This research directly contributes to disaster prediction/detection on a global basis.

Near-term, NASA will require additional spectrum to provide global observations of soil moisture under substantial vegetation canopies and at subsurface depth. This information can aid understanding of the global environment.

---

[9] NTIA petitioned the FCC to address this matter. *See*, Amendment to the National Table of Frequency Allocations, RM-11341, *Petition for Rulemaking*, National Telecommunications and Information Administration, filed Aug. 4, 2006. NTIA also cited the National Space Policy as support for NTIA's petition in a letter to the FCC stating that the U.S. should "seek spectrum regulatory status under U.S. domestic regulations for United States Government owned and operated earth stations operating through commercial satellites, consistent with the regulatory status afforded commercial operations and with the allocation status of the satellite service." *See*, Letter of John M.R. Kneuer, Assistant Secretary of Commerce for Communication and Information to Kevin J. Martin, Chairman, Federal Communications Commission, dated Nov. 16, 2006. *See also*, U.S. National Space Policy, at 9 (August 31, 2006), *available at* http://www.ostp.gov/html/US%20National%20Space%20Policy.pdf.http://www.ostp.gov/html/US%20National%20Space%20Policy.pdf. The FCC has developed some mechanisms for providing such protection, on a case-by-case basis.

4. Space Policy and Research.

a) Overall. The President has authorized a new overarching national space policy.[10] The policy aims to strengthen the nation's space leadership and ensure that space capabilities are available when needed and free from harmful interference in order to further U.S. national security, homeland security and foreign policy objectives, to increase the benefits of discovery and environmental activities, and enable a dynamic, globally competitive domestic commercial space sector.

b) Research. President Bush has made space travel to the Moon and Mars a priority for NASA. NASA identifies specific additional spectrum requirements to meet the large bandwidth necessary to fulfill these missions. NASA has also developed a "Space Communications Architecture" for implementing the Presidential vision for space exploration.

C. <u>High Frequency (HF)</u>

Continued and growing demand for HF spectrum stands out in agency forecasts for defense, homeland security, public safety and continuity of Government operations, both fixed and mobile. Also known as "shortwave" radio, HF encompasses radio frequencies between 3 and 30 MHz. HF can achieve over-the-horizon communications at relatively low cost.[11] HF can serve as a main communications system, and as a backup for satellite communications. DOD notes that HF can be a "common denominator," achieving interoperable communications in multi-service and multi-national operations, especially with coalition partners that have limited communications capabilities.

Several Federal agencies use HF for emergency communications. The National Communications System has established the SHARES HF program for national security and emergency preparedness.[12] The BBG and the Coast Guard identify additional specific requirements for HF spectrum. The BBG uses HF for international non-military broadcasting. The Coast Guard uses HF for maritime mobile communications, and is also exploring use of HF radar systems. The Public Safety Spectrum Needs Plan underscores public safety's reliance on HF in disaster and emergency scenes when commercial and other terrestrial systems are disrupted.

NTIA recognizes the continued and potentially growing need for HF spectrum and will work with the Federal agencies and the FCC to further refine needs and identify possible solutions.

---

[10] *See*, National Space Policy, *supra* note 9 at 5.

[11] HF waves can transmit to the other side of the earth because they are refracted by the Earth's atmosphere, a phenomenon known as ionospheric skip propagation.

[12] SHARES or SHAred RESources HF radio communications program provides a single, interagency emergency message-handling system. SHARES brings together existing HF radio resources of Federal, state and industry organizations when normal communications are unavailable. *See* http://www.ncs.gov/shares/.

D. Radar

Agencies use radar for air and maritime navigation. In addition, the Federal Government, particularly the DOD, uses radar for location, targeting, tracking and surveillance.

Defense and security use of radar systems will continue to grow and evolve. Agencies have projected future radar demand in the HF and VHF bands. Many spectrum bands for radar are not fungible. Rather, radar systems present particular engineering cases and require propagation qualities that are suited to specific missions and purposes vital to national security. However, these Federal uses face increased competition for spectrum from expanding commercial services, as well as services that can serve both Federal and non-Federal users. For example, RFID technologies are heavily used by certain agencies but the technology operates within UHF spectrum allocated for the radiolocation service. Commercial interest in the radar bands for non-Federal applications often begins overseas, but as international implementation becomes successful, interest in U.S. market implementation grows.

E. Air Traffic Control

The FAA projects steady increases in demand for aeronautical mobile capacity. Many of these demands will be met through equipment upgrades. However, flight safety and efficient aircraft movement require greater and timelier information, which could create a need for more spectrum.

F. Above 30 GHz

There are several emerging applications for radar in the upper regions of the spectrum. DOD's study of millimeter wave bands (30-300 GHz) includes radar ground-mapping applications such as precise resolution and target identification. In addition, there is developing interest in the above 300 GHz region for applications such as radio astronomy and remote sensing. Scientists anticipate using these upper frequency ranges to study galaxy and star formation with giant telescopes like the Atacama Large Millimeter Array in Chile. Researchers also are applying "T-rays," or radio waves in the terahertz range above 1000 GHz, to medical imaging and explosive detection.

IV. THE FEDERAL STRATEGY

While the Federal agencies have provided extensive information on their current and projected future spectrum use, this information is primarily qualitative in nature. Only a few have been able to supply quantified estimates of future spectrum uses. Furthermore, while agencies are motivated to utilize effective systems in order to meet their missions, further improvements to the Federal spectrum management framework are needed to improve spectrum efficiency. Agencies have taken some actions to utilize more spectrally efficient systems, for example, by implementing narrowband equipment and taking initial steps to consider the economic value of spectrum. However, more action is needed to meet growing spectrum demand. Further integration of spectrum management into agency capital planning and budget processes is needed to provide a mechanism for consideration of the value of spectrum when investing in new major spectrum-dependent systems. Mechanisms that enable agencies to factor in the value of spectrum or provide other means to use it more efficiently, along with assessment of system effectiveness in meeting mission requirements, could result in investment in more spectrum-efficient systems.

With respect to future non-Federal spectrum requirements, such needs generally are driven by market forces as well as state and local public safety requirements, which are difficult to project over the long run. Moreover, pending collaboration with the FCC on development of a National Strategic Spectrum Plan, information concerning future non-Federal agency spectrum requirements can only be inferred by the rapid growth of new wireless technologies and services over the past few years. In order to accommodate these trends, this Federal Strategic Spectrum Plan seeks to incrementally improve the Federal spectrum management processes through: automation and advanced analytical tools; standardized generation of spectrum requirements; and methods to forecast spectrum trends. These improvements will lead to a better understanding of existing and intended spectrum use and a comprehensive operational picture of the spectrum environment. This increased understanding will enable development of policies and standards which support the introduction and use of adaptive and dynamic means of utilizing spectrum. Improvements to Federal spectrum management must foster promising technologies that improve efficiency and effectiveness and ultimately result in the flexibility, agility and adaptability of spectrum-dependent systems required by Federal and non-Federal entities in the future.

A. Near–Term

For the next five years, NTIA expects the Federal agencies to continue many of the spectrum management improvements they have already instituted in response to the *Presidential Initiative,* including more strategic spectrum planning linked to overall agency strategic and capital planning processes as well as more rigorous analyses of alternative solutions to meeting mission requirements. The Federal Government and the nation will continue to reap the benefits of these and several other ongoing *Presidential Initiative* projects.

The Spectrum Needs Plan identifies the need for further study of public safety requirements.[13] In addition, the Spectrum Needs Plan encourages state and local public safety agencies to formulate long-term strategic spectrum plans that foster interoperability.[14]

NTIA will continue its program to streamline and integrate spectrum management processes through enterprise-wide information services which will reduce the time required to perform

[13] In 1995, the FCC and NTIA convened experts from local, state, and Federal user communities, as well as staff of their respective agencies, and private industry to form the Public Safety Wireless Advisory Committee (PSWAC). The goal of the PSWAC was to determine comprehensively the public safety spectrum requirements through 2010. The 1996 PSWAC Final Report stands as the first and only study of public safety spectrum requirements at all levels of government. *See*, Final Report of the Public Safety Wireless Advisory Committee to the Federal Communications Commission and the National Telecommunications and Information Administration, Sept. 11, 1996, http://www.ntia.doc.gov/osmhome/pubsafe/pswac_al.pdf.

[14] The Spectrum Needs Plan specifically recommends that non-Federal public safety agencies address how they intend to use all available spectrum efficiently, and to maximize the use of new technology, in public safety Tactical Interoperable Communication Plans (TICP), as required by the fiscal year 2005 Homeland Security Grant Program guidance.

operations, eliminate duplicative steps encountered with spectrum management processes, increase information sharing, and encourage consideration of adaptive technologies and efficiency measures. NTIA will continue to work with the Federal agencies in this effort so that the spectrum management community optimizes its human capital and investments as it improves operational effectiveness.

1. Use of Commercial Services Where Feasible. Federal regulations require Federal agencies to use commercial communications and spectrum-dependent services where possible.[15] The rapid deployment of improved commercial technologies, their decreasing costs, and tight Federal budgets can provide incentives to use such services.[16] The COG Annex acknowledges that, as a general rule, the Federal Government should make better use of commercial services.[17] The COG Annex, however, underscores that emergency services require higher standards of reliability and redundancy and that commercial networks may not be designed to this level.

Commercial communications services and networks nevertheless are an important adjunct to dedicated government systems. DOD, in particular, relies heavily on capacity on commercial communications satellites but cannot control the availability of such commercial capacity on an on-going basis. Thus, a rational plan is needed to balance commercial use, involving multiple commercial providers, with availability of government-dedicated systems, to ensure access to satellite capacity, whenever and wherever needed.

2. "Smart" Technologies. Many agencies plan to implement "smart" radio technologies such as software-defined radio (SDR) to improve adaptability and flexibility within an operational environment. Ultimately, these and other technologies will provide more rapid access to needed frequencies, wherever needed, whenever needed.

Through automatic reprogramming, an SDR device can transmit and receive on a wide range of frequencies, and operate pursuant to changing technologies and service rules and standards. "Cognitive" radios are programmed to "perceive" and "learn" their radio environment. By tracking and adapting to their electro-magnetic environment, cognitive radios can dynamically use whatever spectrum is available in any particular moment, and at the same time prevent interference to co-existing systems. NTIA is monitoring the development of such spectrally efficient approaches and encourages additional technology developments, particularly in the area of dynamic spectrum access. NTIA will look to both the government and private sector for assistance and support in devising the necessary plans and strategies that will allow evolution of the spectrum management system to support use of these technologies and minimize human-directed processes.

3. Flexible Approach to Incentives. Currently, regulatory hurdles prevent Federal and non-Federal spectrum users from efficiently sharing spectrum. New policies could allow Federal agencies to benefit from making available underutilized spectrum to non-Federal entities. More

---

[15] *See e.g.,* NTIA Manual, supra note 39 § 8.2.48A ("Federal agencies implementing new land mobile communication systems and replacing aging ones should use available commercially offered land mobile services, or share land mobile services operated by other Federal, state or local government agencies whenever possible.")
[16] NTIA authorization is required for Federal entities operating on spectrum allocated to non-Federal users.
[17] COG Annex, at 2-7.

flexible spectrum sharing could allow both Federal and non-Federal users to more efficiently utilize the spectrum resource through economic and non-economic incentives. NTIA is studying various incentive approaches and methodologies to promote the use of spectrum-efficient technologies to satisfy Federal and non-Federal spectrum needs. These studies will identify policy changes required to implement these incentive mechanisms, possibly including secondary markets, property rights, sharing, and fees. NTIA expects to develop recommendations relating to these policy changes, as appropriate, develop legislative proposals as required, and implement such policies within the Federal Government.

4. Interoperability and Other Public Safety Issues.

a) Regulatory Flexibility. The lack of communications interoperability among public safety agencies is a complex and key concern. Several agencies have called for rule changes and policy reforms to improve interoperability and sharing in emergencies. NTIA, with the advice of the Interdepartment Radio Advisory Committee (IRAC), recently took steps to address the need for non-Federal entities to use public safety spectrum in appropriate situations.[18]

b) Federal/Non-Federal Public Safety Demonstration. Pursuant to the *Presidential Initiative*, NTIA tested the operational and cost effectiveness of sharing spectrum and communications infrastructure among Federal, state and local governments, and other non-Federal users.[19] This test utilized the Washington, DC Wireless Accelerated Responder Network (WARN), a pilot program operating on a dedicated public safety network in the 700 MHz band under an FCC experimental license. WARN provides real-time video for city-wide remote surveillance, chemical and biological detection and other emergency-related services. NTIA published a report on the results and observations of the demonstration project and associated recommendations in 2007.[20]

c) Microwave Backhaul. The Spectrum Needs Plan anticipates requirements for expanded microwave backbone networks to accommodate new public safety services, as contemplated in the 700 MHz band. The Spectrum Needs Plan recommends that the FCC, in coordination with NTIA and DHS, work with the public safety community to assess this need, as well as opportunities for sharing within the public safety community.

5. COG Considerations. The COG Annex to the Spectrum Needs Plan advises that, as new frequencies are assigned or re-allocated, spectrum managers consider how to support alternative communications in emergencies. NTIA will take these concerns into account, as appropriate.[21]

---

[18] *See*, NTIA Manual, *supra* note 39 § 4.3.16.
[19] *See*, *Spectrum Policy for the 21st Century -- The President's Spectrum Policy Initiative: Report 2, Recommendations from State and Local Governments and Private Sector Responders*, U.S. Dep't of Commerce, National Telecommunications and Information Administration (June 2004) (Report 2), http://www.ntia.doc.gov/reports/specpolini/presspecpolini_report2_06242004.pdf.
[20] *See*, *A Public Safety Sharing Demonstration*, U.S. Dep't of Commerce, NTIA (May 2007), http://www.ntia.doc.gov/reports/NTIAWARNReport.pdf. This report fulfilled Recommendation 9(b) of Report 2. *See, supra* note 19, at 26.
[21] *See generally*, section III.C, *supra* at page 6.

6. IT Upgrades to the Federal Spectrum Management System. The *Presidential Initiative* underscores the criticality of information technology to reaching the ultimate goal of real-time processing of requests for new or additional frequency assignments. NTIA and the FCC have worked together in the past to automate frequency coordination. Future automation could build upon the success of 70-80-90 GHz coordination, where millimeter wave bands, once exclusively used by Federal agencies, can now be approved for non-Federal use in a matter of minutes. NTIA also is working to streamline the work of Federal spectrum managers through IT innovations such as single portal access to both classified and non-classified systems, electronic access to the IRAC documents and creation of a "Data Dictionary" that will standardize the terminology used in frequency applications.

7. Spectrum Valuation and Economic Efficiency. As directed by the President, the Office of Management and Budget has instructed the Federal agencies to consider the economic value of radio spectrum when developing justifications for new systems.[22] NTIA's *Presidential Initiative* program is considering methods of valuing Federal spectrum as well as incentives for more efficient spectrum use within the Federal Government.

The 2004 Executive Memorandum also directed the NTIA to develop a plan to identify and establish possible incentives for both the Federal and non-Federal sectors to use spectrum more efficiently and effectively. NTIA has created a project plan for this task, and begun its implementation. NTIA convened a public-private workshop on incentives in 2006 and inventoried international spectrum management "best practices". NTIA continues to focus on spectrum valuation, possible levying of user fees for Federal spectrum use, increased sharing and other, market and non-market-based approaches to stimulate the most efficient use of this important natural resource.

8. Technical Efficiency. NTIA's engineers are developing more precise methods to improve management of scarce spectrum. For example, NTIA is developing models for optimizing efficiency and effectiveness in land mobile systems. The Commerce Spectrum Management Advisory Committee (CSMAC) is studying technical and operational sharing efficiencies. DOD is developing a spectrum evaluation mechanism, the "spectrum scorecard", which provides a spectrum efficiency and effectiveness trade-off analysis for program managers. Further programs will develop automated spectrum management tools that also will promote dynamic frequency use, increasing the amount of time frequency assignments are in use.

9. Forecasting Trends. Development of new spectrum management tools will improve quantification of Federal spectrum use, and refine estimates of future requirements. NTIA will continue to collaborate with the Federal agencies, and other entities, as appropriate, on how to make projections of spectrum usage as accurate as possible. These efforts include exploring how to better predict both Federal and private sector spectrum use, including study of scenario-based simulation methods. These new approaches will improve forecasts of spectrum trends, and new tools will enable tracking spectrum usage in the dimensions of both time and space.

---

[22] The Office of Management and Budget (OMB), Circular A-11, § 33.4 (2006), *available at* http://www.whitehouse.gov/omb/circulars/a11/current_year/s33.pdf (last visited, Feb. 7, 2008).

10. Improved Interagency and Federal/Private-Sector Coordination. The Policy and Plans Steering Group (PPSG), an advisory group of senior, political-level Federal officials advising NTIA's Administrator on spectrum policy and strategic plans, will continue to serve as a forum for issue resolution and harmonization on *Presidential Initiative* tasks.[23] The CSMAC will provide valuable input from the private sector. In addition, the working partnership between NTIA and the FCC on automation will reduce the need for staff to handle individual spectrum requests. Finally, NTIA's collaboration with the FCC on a National Strategic Spectrum Plan will promote full integration and execution of *Presidential Initiative* recommendations.

B. Mid-Term

1. Median Objectives. NTIA's five-to-ten-year goal is achieving a unified approach to improved spectrum situational awareness and adaptive spectrum use and control. Improved processes will increase the accuracy and fidelity of Federal spectrum requirements data. NTIA and FCC coordination will be automated, eliminating the "man in the loop" for most aspects of spectrum assignment and frequency coordination. DOD also is taking steps now to achieve automated coordination of its internal spectrum assets.

2. NTIA/FCC New Technology Testbed. The test bed proposal is a key recommendation of the President's Initiative.[24] It will enable Federal and non-Federal users of spectrum to explore new technologies and methods to share the finite radio spectrum. Both the NTIA and the FCC have solicited comment on the proposal. Each agency will identify 10 MHz of spectrum to be used in the test. NTIA expects that this project will drive future innovation and increased sharing to benefit government and commercial users, and serve as a proving ground and catalyst for advancing technologies important to dynamic spectrum access.

C. Long-Term

Because the agency-specific strategic spectrum plans contain limited information regarding future requirements and technology, NTIA's long-range assumptions are necessarily also limited. At this time, NTIA cannot predict the precise technologies, services and processes that will be utilized a decade from now. Current allocation and authorization methods and low-power unlicensed underlays will continue in use. For many bands and services, NTIA also envisions increased spectrum sharing through cognitive, self-adjusting spectrum use. This will provide a higher level of confidence of increased spectrum access for Federal, public safety and commercial users, providing an overall framework for meeting increasingly complex spectrum needs. Spectrum access on a dynamic basis will be realized only through effective planning by the spectrum management community to define and take the steps necessary to achieve this long-term vision. It is NTIA's goal within the next two-to-five years to identify the spectrum management framework required for the Federal Government to keep pace with the dramatic changes in technology and to achieve this vision of spectrum use. NTIA expects to execute this new framework within Federal spectrum management and related processes by 2012.

---

[23] *See* Report 1, Recommendation 13, *supra* note 4, at 29.
[24] *See*, Recommendation 11, Report 1, *supra* note 4, at 28.

V. RECOMMENDATIONS

This Federal Plan sets in motion an evolutionary strategy for an overarching national spectrum policy for the 21st Century. The goal of this strategy is to provide access to spectrum for Federal and non-Federal users alike on an increasingly dynamic basis. In charting this course, both Federal and non-Federal sectors must work together to create a unified vision for this future state. The overarching, high-level vision, architecture, and steps to achieve the goals of the President's Spectrum Policy for the 21st Century will be articulated in this policy. A Federal or National Strategic Plan for Spectrum Management must embody this vision, architecture and steps and provide a blueprint for spectrum management for the Federal Government. Each Federal agency should then formulate a corresponding strategic plan for spectrum management to ensure that all agencies are consistent and unified in realizing this holistic vision. Finally, NTIA will continue to work with the Federal agencies to collectively and collaboratively establish the foundation, incremental steps, actions and milestones necessary to move the United States forward to achieving this goal. The National Telecommunications and Information Administration invites the Federal agencies, the Federal Communications Commission, and the spectrum-using American public, with input from technology and equipment developers and service providers, to work together to achieve this future of dynamic spectrum access.

Appendix A

PRESIDENTIAL MEMORANDUM

the White House
President George W. Bush

For Immediate Release
Office of the Press Secretary
November 30, 2004

Presidential Determination: Memorandum for the Heads of Executive Departments and Agencies

MEMORANDUM FOR THE HEADS OF EXECUTIVE DEPARTMENTS AND AGENCIES

SUBJECT: Improving Spectrum Management for the 21st Century

In May 2003, I established the Spectrum Policy Initiative to promote the development and implementation of a U.S. spectrum management policy for the 21st century. This initiative will foster economic growth; promote our national and homeland security; maintain U.S. global leadership in communications technology; and satisfy other vital U.S. needs in areas such as public safety, scientific research, Federal transportation infrastructure, and law enforcement.

The existing legal and policy framework for spectrum management has not kept pace with the dramatic changes in technology and spectrum use. Under the existing framework, the Federal Government generally reviews every change in spectrum use. This process is often slow and inflexible and can encourage the introduction of new technologies. Some spectrum users, including Government agencies, have argued that the existing spectrum process is insufficiently responsive to the need to protect current critical uses.

As a result, I directed the Secretary of Commerce to prepare recommendations for improving spectrum management. The Secretary of Commerce then established a Federal Government Spectrum Task Force and initiated a series of public meetings to address improvements in policies affecting spectrum use by the Federal Government, State, and local governments, and the private sector. The recommendations resulting from these activities were included in a two-part series of reports released by the Secretary of Commerce in June 2004, under the title Spectrum Policy for the 21st Century - The Presidents Spectrum Policy Initiative (Reports).

Therefore, to the extent permitted by law and within existing appropriations, I hereby direct the heads of executive departments and agencies (agencies) to implement the recommendations in the Reports as follows:

Section 1. Office of Management and Budget.

Within 6 months of the date of this memorandum, the Office of Management and Budget (OMB) shall provide guidance to the agencies for improving capital planning and investment control procedures to better identify spectrum requirements and the costs of investments in spectrum-dependent programs and systems. Within 1 year of the date of this memorandum, agencies shall implement methods for improving capital planning and investment control procedures consistent with the OMB guidance, including making any modifications to agency capital planning procedures necessary to ensure greater consideration of more efficient and cost-effective spectrum use.

Section 2. Other Executive Departments and Agencies.

(a) Within 1 year of the date of this memorandum, the heads of agencies selected by the Secretary of Commerce shall provide agency-specific strategic spectrum plans (agency plans) to the Secretary of Commerce that include: (1) spectrum requirements, including bandwidth and frequency location for future technologies or services; (2) the planned uses of new technologies or expanded services requiring spectrum over a period of time agreed to by the selected agencies; and (3) suggested spectrum efficient approaches to meeting identified spectrum requirements. The heads of agencies shall update their agency plans biennially. In addition, the heads of agencies will implement a formal process to evaluate their proposed needs for spectrum. Such process shall include an analysis and assessment of the options available to obtain the associated communications services that are most spectrum-efficient and the effective alternatives available to meet the agency mission requirements. Heads of agencies shall provide their analysis and assessment to the National Telecommunications and Information Administration (NTIA) for review when seeking spectrum certification from the NTIA.

(b) Within 6 months of the date of this memorandum, the Secretary of Homeland Security, in coordination with the Secretary of Commerce and, as appropriate, the Chairman of the Federal Communications Commission, and considering the views of representatives from: (1) the public safety community, (2) State, local, tribal, and regional governments; and (3) the private sector, shall identify public safety spectrum needs.

(c) Within 1 year of the date of this memorandum, the Secretary of Homeland Security, in consultation with the Secretary of Commerce, the Director of the Office of Science and Technology Policy, the Director of the Office of Management and Budget, the Attorney General, the Secretaries of State, Defense, Transportation, Agriculture, and the Interior, the heads of other appropriate agencies, and, as appropriate, the Chairman of the Federal Communications Commission, shall develop a comprehensive plan, the Spectrum Needs Plan, to address issues related to communication spectrum used by the public safety community, as well as the continuity of Government operations. The Spectrum Needs Plan shall be submitted to the President through the Assistant to the President for Homeland Security, in coordination with the Assistant to the President for Economic Policy and other relevant components of the Executive Office of the President.

Section 3. Department of Commerce.

(a) Within 6 months after receiving the agency plans developed in section 2(a) of this memorandum, the Secretary of Commerce shall integrate the agency plans and Spectrum Needs Plan, based upon a Department of Commerce framework, into a Federal Strategic Spectrum Plan and shall assist in the formulation of a National Strategic Spectrum Plan. The Secretary of Commerce, in consultation with the Chairman of the Federal Communications Commission, as appropriate, shall update the National Strategic Spectrum Plan on a biennial basis thereafter.

(b) Within 1 year of the date of this memorandum, the Secretary of Commerce, in coordination with other relevant Federal agencies identified by the Secretary, shall develop a plan for identifying and implementing incentives that promote more efficient and effective use of the spectrum while protecting national and homeland security, critical infrastructure, and Government services.

(c) Within 6 months of the date of this memorandum, the Secretary of Commerce shall establish a plan for the implementation of all other recommendations included in the Reports. Not more than 1 year from the date of this memorandum, the Secretary of Commerce shall provide to the President a report describing the progress on implementing the recommendations in the Reports. The report shall include a section prepared by the Secretary of Homeland Security that describes the progress made with respect to public safety spectrum issues. This report shall be updated on an annual basis, until completion of the actions required by this memorandum. The heads of agencies shall provide the Secretary of Commerce and the Secretary of Homeland Security with any assistance or information required in the preparation of the annual report.

(d) The plans in sections 3(a)-(c) and the annual report developed in section 3(c) of this memorandum shall be submitted to the President through the Assistant to the President for Economic Policy, in coordination with the Assistant to the President for National Security Affairs and other relevant components of the Executive Office of the President.

(e) As appropriate, the Secretary of Commerce and heads of other agencies shall consult with the Chairman of the Federal Communications Commission regarding the implementation of the recommendations in the Reports.

Section 4. General.

(a) Nothing in this memorandum shall be construed to impair or otherwise affect the functions of the Director of the Office of Management and Budget relating to budget, administrative, or legislative proposals.

(b) This memorandum is intended only to improve the internal management of the Federal Government and is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity, by a party against the United States, its departments, agencies, entities, instrumentalities, its officers or employees, or any other person.

(c) This order shall be implemented in a manner consistent with existing statutes, treaties, Executive Agreements, and Executive Orders affecting the operation of any of the departments, agencies, or instrumentalities of the Federal Government.

GEORGE W. BUSH

# # #

Appendix B

CURRENT FEDERAL SPECTRUM USE AND FUTURE REQUIREMENTS

INTRODUCTION

This Appendix describes the current and expected future uses of the spectrum for radiocommunication based on the submissions of the fifteen Federal agencies selected by the Secretary of Commerce in accordance with the direction of the President. This compendium is based on the National Telecommunications and Information Administration's (NTIA) review, compilation, and synthesis of these submissions so that the Federal Government's current and future spectrum needs could be described in the context of agency missions and functions. In preparing this Appendix, NTIA sought, as requested by the various Federal agencies, to ensure that the descriptions and subject matter presented would not jeopardize the sensitivity of government operations. This Appendix: (1) summarizes Federal agency spectrum use on a service-by-service basis; (2) addresses the specific needs of the public safety community; (3) discusses the impact of new technologies on Federal agency spectrum use; and (4) provides summaries of the Federal agency-specific strategic spectrum plans submitted to NTIA.

SPECTRUM ALLOCATIONS

Radio frequency spectrum allocations are a result of domestic and international spectrum planning processes in which parts of the spectrum ("frequency bands" or simply "bands") are set aside or allocated to the different radio services in a table of radio frequency spectrum allocations.[25] Most allocations result from the collective activities of the member nations of the International Telecommunication Union (ITU), a United Nations specialized agency. An international Table of Frequency Allocations is necessary because radio transmissions can transcend national borders. Furthermore, some services, such as aeronautical radionavigation, require the international commonality that such a table provides.

The ITU Table of Frequency Allocations is part of the ITU Radio Regulations, which has international treaty status. Each country, however, retains national sovereignty with respect to operation of wireless devices within its boundaries, and can adopt its own allocations. However, most ITU signatory countries, including the United States, use the ITU table as the basis for their national table. Many nations consider their table of frequency allocations as their national spectrum plan, since it provides guidance as to where in the radiofrequency spectrum to operate radio systems, including those under development. The ITU Table of Frequency Allocations not

---

[25] Three key terms "allocation," "allotment," and "assignment" have precise legal definitions based on international telecommunications treaty law. These are incorporated into the U.S. regulations and are:

An allocation (of a frequency band) is "entry in the Table of Frequency Allocations of a given frequency band service under specified conditions. This term shall also be applied to the frequency band concerned."

An allotment (of a radio frequency or radio frequency channel) is "entry of a designated frequency channel in an agreed plan."

An assignment (of a radio frequency or radio frequency channel) is "authorization given by an administration for a radio station to use a radio frequency or radio frequency or a radio frequency channel under specific conditions."

See, ITU Radio Regulations, art. 1, sec. II, at 1.16-1.18 (Geneva 2004).

only pertains to current uses but provides allocations which can address many future needs. In some cases, individual country allocations may differ slightly from the ITU table, depending upon the spectrum needs of that nation. The United States further divides its allocation table into Federal and non-Federal allocations.[26]

The allocation table structure, both international and domestic, often allows multiple radio services in a frequency band. This provides flexibility within a country to use location, time or another aspect of a radio operation to allow sharing the same spectrum without harmful interference. In many cases, a country takes a band allocated to multiple services and separates those services into specific subbands to prevent interference or simplify assignment. The table of frequency allocations is changed as needed to accommodate new technologies and radio services, and to accommodate additional spectrum requirements created by growth in existing services. Similarly, spectrum allocations may no longer be required for some obsolete technologies or services that are no longer used, freeing that spectrum for other uses. The ITU changes the Table of Frequency Allocations via decisions made during World Radiocommunication Conferences (WRC). With the exception of changes in the bands allocated exclusively to Federal Government users, spectrum allocation changes in the United States are made in accordance with administrative law procedures.[27] For example, if a new service or system does not "fit" into an existing service category or allocation, a lengthy domestic, and often international process, is required to define the new service and provide allocations for such service. These processes, when they require changes to the international table of frequency allocations, can take many years.

[26] For the purposes of this Federal plan, Federal frequencies or allocations are those allocated for the Federal Government and NTIA authorization is required for federal entities operating in the radio frequency spectrum. Those allocated for use by state and local governments, commercial and private entities are non-Federal allocations and FCC authorization is required for non-federal entities operating in the spectum. It should be noted that there also are shared Federal and non-Federal allocations.
[27] *See*, Administrative Procedures Act, 5 U.S.C. § 553 (1946, as amended).

SECTION B-2

PUBLIC SAFETY SPECTRUM NEEDS

STATE AND LOCAL PUBLIC SAFETY SPECTRUM NEEDS

INTRODUCTION

When the President initiated the Spectrum Policy Reform Initiative in June 2003, he requested the Secretary of Commerce to prepare legislation and other recommendations to, among other things, develop means to address the critical spectrum needs of national security, homeland security, and public safety.

Subsequently, the President directed the Secretary of Homeland Security, in consultation with other Federal, state, and local agencies "to address issues related to communication spectrum used by the public safety community, as well as continuity of government operations" in a comprehensive plan, the "Spectrum Needs Plan."[229] DHS accordingly formulated a Public Safety Spectrum Needs Plan (Spectrum Needs Plan) after consulting with the NTIA, the FCC, and state, local, tribal and Federal public safety agencies. The President also directed the DOC to integrate the Spectrum Needs Plan and agency-specific strategic spectrum plans into a "Federal Strategic Spectrum Plan."[230]

DHS's plan addressed concerns of public safety spectrum users, identified the spectrum assets currently available and provided information concerning the public safety community's interest in spectrum in the 700 MHz band. Because the Spectrum Needs Plan was submitted prior to the FCC's actions in 2007 with respect to public safety use of spectrum in the 700 MHz band, it did not address the FCC's most recent decisions concerning public safety's access to narrowband and broadband allocations in that band. The FCC recently designated 10 MHz of spectrum in the 700 MHz band for a nationwide interoperable public safety broadband network to be provided by a public-private partnership.[231] This 10 MHz is part of the 24 MHz in the 700 MHz band already allocated to public safety (12 MHz for narrowband, 10 MHz for broadband,

---

[229] Presidential Determination: Memorandum for the Heads of Executive Departments and Agencies, Improving Spectrum Management for the 21st Century, §§ 2(c), 3(a) (Nov. 30, 2004) (2004 Executive Memorandum) http://www.whitehouse.gov/news/releases/2004/11/20041130-8.html.

[230] State and local public safety radio services fall under the regulatory authority of the FCC. Therefore, rules, procedures, and spectrum needs are developed and codified by them. It is anticipated that the FCC will provide additional information on behalf of the State and local public safety communities during the development of the National Strategic Spectrum Plan.

[231] *See, Implementing a Nationwide, Broadband, Interoperable Public Safety Network in the 700 MHz Band; Development of Operational, Technical and Spectrum Requirements for Meeting Federal, State and Local Public Safety Communications Requirements Through the Year 2010*, PS Docket No. 06-229, Second Report and Order, 22 F.C.C.R. 15289 (2007) (Second Report and Order). *See also*, Intelligence Reform and Terrorism Prevention Act of 2004, Pub.L.No. 108-458, § 7303, 118 Stat. 3638 (2004). *See also*, *FCC Revises 700 MHz Rules to Advance Interoperable Public Safety Communications and Promote Wireless Broadband Deployment*, FCC Press Release, http://fjallfoss.fcc.gov/edocs_public/attachmatch/DOC-275669A1.doc.

and 2 MHz for an internal guard band).[232] Thus, the following section contains information that in addition to that provided in the Spectrum Needs Plan, in order to accurately describe how spectrum will be made available for a nationwide interoperable broadband public safety system following the broadcast industry's return of analog spectrum in early 2009.

CURRENT NON-FEDERAL PUBLIC SAFETY SPECTRUM ASSETS

The FCC has allocated more than 97 MHz of spectrum for public safety service providers, including spectrum allocated prior to 2007. This includes 24 MHz of spectrum in the 763-775 and 793-805 MHz bands,[233] depicted in Table B-8, which will be available nationwide when terrestrial television broadcasters transition to digital television and release the spectrum currently used for analog transmissions. Congress mandated that non-Federal public safety entities will have nationwide access to all of the 24 MHz no later than February 17, 2009 when broadcasters must cease analog operations.[234]

Table B-8 depicts the existing allocations to Non-Federal public safety interests.

Table B-8. Existing Non-Federal Public Safety Frequency Bands*

Non-Federal Public Safety Frequency Band (MHz)	Voice	Narrowband Data		Broadband Data	National Interoperability[235]	Outside Interference	Conventional or Trunked
2–25	✓	✓					Conventional
25–50	✓	✓					Conventional
72–76	✓	✓					Conventional
150–162[236]	✓	✓			✓		Both
220–222	✓	✓			✓		Conventional
450–470	✓	✓			✓		Both
470–512[237]	✓	✓					Both
763–775 793–805[238]	✓	✓		✓	✓		Both
806–821 851–866	✓	✓				✓	Both
821–824 866–869	✓	✓			✓	✓	Both
4940–4990[239]	✓			✓			N/A

*Source: DHS Public Safety Spectrum Needs Plan with addition of broadband notation for 700 MHz bands

[235] Current national interoperability channels are:

0.25 MHz of the 150–174 MHz band, which includes five narrowband channels in the 162–174 MHz federal band.
0.2 MHz of the 450–470 MHz band
2.6 MHz of the 763–775–776 and 793–805–806 MHz band
0.125 MHz of the 821–824 and 866–869 MHz band.

[236] Fire departments tend to select the 150-162 MHz band because of its long-range propagation characteristics.

[237] All frequencies in this band are only available in 11 metropolitan areas.

[238] *Infra* n. 256.

[239] Allocations in 4940–4990 MHz are best suited for incident site communications, i.e., high-speed, short-distance transmissions.

Unencumbered Spectrum

The DHS Spectrum Needs Plan emphasizes that certain public safety communications, especially those supporting emergency situations, command and control, situational analysis, and other mission-critical functions require spectrum unencumbered by other users to ensure reliability and eliminate or reduce potential interference.

Interoperability

The requirement for interoperability is a major concern for public safety identified by DHS. Federal agencies primarily use the 162-174 MHz and 406.1-420 MHz bands for their public safety requirements. Local and state public safety agency systems operate in many different bands, ranging from 25 MHz to 4.9 GHz. Existing public safety communications systems operating below 512 MHz lack common and sufficient channels to support all interoperability requirements. Fewer than a dozen standardized state and local interoperability frequencies, set aside by the FCC, exist below 512 MHz.

DHS cites the following challenges to achieving interoperability: (1) inadequate interagency cooperation; (2) insufficient standard operating procedures; (3) lack of available interoperable equipment; (4) inadequate training; and (5) lack of sufficient interoperable spectrum. Interoperability gateways, such as IP switches, have demonstrated the ability to "patch" systems together in certain circumstances.

However, the Spectrum Needs Plan indicates that such techniques are insufficient to provide broad-based, reliable and robust interoperability because of high costs, requirements for technically-trained staff, and limitations on the ability of such systems to support direct unit-to-unit communications.

The Spectrum Needs Plan suggested that additional allocations of spectrum designated specifically for interoperability could assist agencies in local, state and Federal homeland security coordination. Contiguous frequency allocations also could permit efficient equipment design and allow public safety agencies to benefit from economies of scale in equipment purchases.

Broadband Operational and Spectrum Requirements

Public safety requirements for and use of bandwidth-intensive wireless technologies are increasing. These broadband services include: in-car video cameras, medical video, mobile surveillance, software downloads, and transmission of large data files. The FCC reallocated the 4940-4990 MHz band in 2003 from a Federal Government-only allocation for fixed and mobile non-Federal public safety services.[240] In its reallocation order, the FCC adopted rules "intended

[240] *See, The 4.9 GHz Band Transferred from Federal Government Use,* Third Report and Order, 18 F.C.C.R. 9152 (2003) (*Third Report and Order*). *See also, The 4.9 GHz Band Transferred from Federal Government Use,* WT

to accommodate a variety of new broadband applications such as high-speed digital technologies and wireless local area networks for incident scene Management, dispatch operations and vehicular operations." However, according to the Spectrum Needs Plan, the non-Federal public safety community has not extensively used the 4940-4990 MHz band because of propagation characteristics, limited geographic range, lack of available and affordable equipment, and susceptibility to adverse weather conditions. Within the context of the reallocation of the analog television spectrum in the 700 MHz band, numerous public safety organizations supported an allocation of 700 MHz band spectrum for broadband use, as part of the 24 MHz already identified for public safety use beginning in 2009.[241] The recent FCC action to create a nationwide interoperable public-safety broadband system in the 700 MHz band is intended to address these requirements.[242]

FCC Actions to Provide For a Nationwide Interoperable Broadband Public Safety Network

The FCC, in August, 2007, determined that 10 MHz of the spectrum from the D Block (758-763 MHz and 788-793 MHz) to be auctioned in early 2008, combined with 10 MHz of public safety's 24 MHz (763-768 MHz and 788-793 MHz), will be made available to form a nationwide shared public safety/private broadband network. The Commission concluded that a single nationwide Public Safety Broadband License would be issued for the 10 MHz designated for public safety. The "Public Safety Broadband Licensee will be responsible for implementing the 700 MHz public safety nationwide interoperable broadband network".[243] The broadband network (using both public safety's 10 MHz and the commercial 10 MHz) will be funded and built by the commercial D Block licensee.

The FCC decided that the "upper 700 MHz D Block Licensee will gain access to the 700 MHz public safety broadband spectrum on a secondary preemptible basis through a spectrum leasing arrangement with the Public Safety Broadband Licensee."[244] The basis for such access will be negotiated between the commercial D Block licensee and the Public Safety Broadband licensee.

The public safety licensee, as prescribed by the FCC, is comprised of a broad range of organizations representative of non-Federal public safety interests. Under FCC rules, no

[243] *Id*. at 142.

[244] *Id*.

commercial interest may be held in or participate in the management of the Public Safety Broadband Licensee.[245]

Because there are some existing public safety narrowband systems in portions of the 700 MHz band, the FCC determined that narrowband operations now operating in channels 63 and 68 (and the upper 1 megahertz of channels 64 and 69) must be relocated no later than the DTV transition date of February 17, 2009.[246]

These existing narrowband systems will have to be relocated to accommodate the new band plan and ensure that the 700 MHz nationwide interoperable broadband system can be implemented as soon as possible by the D block licensee. The FCC determined that the Upper 700 MHz D Block commercial licensee will be required to pay the costs associated with relocating public safety narrowband operations to the consolidated channels, "in recognition of the significant benefits that will accrue to the D Block licensee".[247]

NON-FEDERAL SPECTRUM USE AND FUTURE SPECTRUM REQUIREMENTS

Spectrum Requirements Below 512 MHz for Communications in Rural Areas

Outside the major urban areas, most public safety agencies operate below 512 MHz because the long-range propagation characteristics of VHF make it much more cost-effective to cover larger areas with fewer antenna towers. Furthermore, in rural areas, there is often insufficient capacity on existing public safety VHF channels, and DHS has recommended the identification of additional frequencies for rural-area communications.

Improving Spectrum Efficiency by Narrowbanding

Narrowbanding increases spectral efficiency by using technological measures to transport the same wireless information in a percentage of the spectral bandwidth (typically fifty percent). DHS recommends narrowbanding below 512 MHz for voice and low-speed data applications.

Spectrum Requirements for Point-To-Point Microwave Radio Relay Backhaul Links

The availability to non-Federal public safety entities of 700 MHz band spectrum will encourage deployment of wide-area, multi-agency radio systems that may require expanded infrastructure. Such infrastructure is likely to include point-to-point fixed microwave communications links. The non-Federal public safety community does not currently have dedicated allocations in the 6 GHz, 10-11 GHz, 12 GHz, 18 GHz, or 21-23 GHz microwave bands. Microwave radio relay link backhaul communications provide inexpensive and effective long-distance communication, especially when land-line (wire) systems are disrupted in an emergency.

---

246 *Id.* at 132.
247 *Id.* at 133.

Therefore, DHS suggests that it would be useful for the FCC, in coordination with NTIA and DHS, to work with the public safety community to perform an assessment of current public safety point-to-point microwave use to evaluate anticipated growth and a potential need for additional public safety exclusive microwave spectrum, as well as opportunities for sharing microwave spectrum within the public safety community and between public safety and other users of point-to-point systems.

USING COMMERCIAL SERVICES FOR PUBLIC SAFETY

Public safety agencies require readily available spectrum in emergency situations. Commercial services have a tolerated a level of non-coverage in some areas and at some times. DHS therefore does not view commercial services as an effective solution for mission-critical public safety spectrum use. However, guidelines and resources to aid public safety agencies in identifying appropriate commercial applications could be useful. This may free up dedicated public safety spectrum for mission-critical functions.

LONG-RANGE STRATEGIC SPECTRUM PLANNING

Public safety telecommunications needs continue to grow as homeland security responsibilities increase. Therefore, the DHS, in coordination with the FCC and NTIA, will have a key role in providing guidance for non-Federal public safety agencies to prepare long-range strategic spectrum plans.

DHS also recommends conducting a comprehensive examination of public safety communications, comparable to the 1996 Final Report of the Public Safety Wireless Advisory Committee (PSWAC).[248] Further, in coordination with DOC and the FCC, DHS suggests that the PSWAC findings be reviewed in light of the changes that have occurred in the public safety environment over the past decade.

CONCLUSION

While additional spectrum in the 700 MHz band will be made available to state, local and tribal public safety entities pursuant the FCC's recent action, the benefits from the public-private partnership will take a number of years to be realized. In addition, a number of technical, operational, financial and political issues will need to be addressed as this system is implemented. However, the public safety community and the public at large could reap significant benefits from the responsiveness of the Congress and the FCC to the requirements for spectrum for broadband interoperable public safety communications.

However, more spectrum in and of itself will not solve all of the challenges facing non-Federal public safety communications. To respond to these challenges, the non-Federal public safety community is working to develop common standards for certain radio systems, implement new technologies, interconnect with other networks, including IP networks, and develop back-up systems. Increasingly, the non-Federal public safety community is coordinating these efforts

[248] PSWAC Report, *supra* note 13.

across jurisdictional boundaries. With the additional 700 MHz spectrum available for a nationwide interoperable broadband public safety system, state, local and tribal public safety entities should be able to develop interoperable systems (both narrowband and broadband) which significantly improve the communications capabilities needed to safeguard life and property.

FEDERAL PUBLIC SAFETY SPECTRUM NEEDS

CURRENT SPECTRUM USE AND FUTURE SPECTRUM REQUIREMENTS

The 162-174 MHz and 406.1-420 MHz bands, the two most heavily used Federal bands, are the primary public safety bands for Federal agencies.[249] The general use of these bands is discussed in more detail in the mobile and land mobile sections of Section B-1.

Most Federal agencies note that their departments rely on spectrum for public safety and interoperability purposes. Many agencies see an even greater future need for spectrum for these uses, but have not yet quantified these needs.

DOE expects that incident prevention and control will require UWB technology, in addition to land mobile radio systems, in the 162 MHz and 406.1 MHz bands to communicate with public safety.

DOJ sees the need for rapid response, and thus, unfettered spectrum access as situations dictate. DOJ needs the ability to set up mobile land mobile repeaters where a mission may require, without the need for embedded infrastructure. DOJ's use of nationwide land mobile frequencies may be justified in such cases.

As the USDA's operational support requirements increase, National Interagency Fire Center (NIFC) operations would be vastly improved with the permanent assignment of additional national frequencies. The NIFC is the nation's support center for wildland firefighting. Through the NIFC, seven Federal agencies, along with state foresters, work cooperatively to fight fires and provide other natural disaster relief across the country. The NIFC maintains a cache of handheld land mobile radios for use in large scale disaster relief.

The USDA keeps accurate records on the annual use of permanently assigned spectrum and frequencies temporarily assigned from other agencies. Every year the USDA engages in sophisticated planning for the upcoming fire season, using historical information and data from the drought index, weather, water, and snow-pack programs to anticipate resources, including radio frequencies. Traditionally, other Federal agencies provide USDA with temporary assignments to make up for shortfalls in permanent USDA frequency assignments. This impacts firefighting operations because off-the-shelf equipment configured to operate on USDA's permanently assigned frequencies often has to be reconfigured to operate on temporary frequencies before it can be deployed.

---

[249] *Alternative Frequencies for Use by Public Safety Systems: Response to Title XVII, Section 1705 of the National Defense Authorization Act for FY2001*, U.S. Dep't of Commerce, NTIA Special Pub. 01-48 at 3-1 (Dec. 2001).

The Federal Government is increasingly looking to the NIFC to perform emergency support functions in addition to wildland firefighting, such as relief from weather-related natural disasters. Additional incident-command frequencies for large-scale incidents would improve overall operations. NIFC shares their existing frequencies with other Federal agencies for non-emergency operational needs when not in use.

INTEROPERABILITY

For DHS, interoperability means day-to-day, task force and incident (emergency response) communications both horizontally (Federal-to-Federal) and vertically (Federal-state-local-tribal). It sees an increased need for interoperation with other Federal agencies and non-Federal first responders.

DOJ expects an expanded presence in FCC-regulated spectrum at 150-162 MHz, 450-470 MHz, and 800 MHz region to support interoperability. There is a critical requirement for interoperability with non-Federal public safety users in these bands and DOJ expects interoperability needs to grow exponentially. These interoperability requirements are localized, and consequently, not amenable to a nationwide solution.

The VA also expects to join with other Federal, state, and local agencies to develop interoperable first responder capabilities. Treasury operates an interoperability frequency named the "Federal Common" which can be shared among all Federal agencies for law enforcement, as well as in coordination with State and local police in emergencies.

Many DOE field offices have established cooperative relationships with local and state public safety agencies.

DOI/Bureau of Land Management is reengineering and consolidating its land mobile systems with its partners to reduce spectrum demand and improve interoperability.

Several agencies acknowledge the importance of standardized equipment. DOC is developing a standard in LMR Project 25 for narrowband land mobile radios for public safety. The Coast Guard's uses for VHF high band (136-174 MHz) Project 25 include interoperability with Federal agencies. The Coast Guard's Rescue 21 system, an advanced search and rescue system that is replacing the Coast Guard's current system, the National Distress Response System, requires interoperability with public safety. Rescue 21 enhances line of sight coverage, increases position localization, increases the number of available voice and data changes and improves interoperability with Federal, state and local partners.

The new IWN acts as the core for some agencies' interoperability plans. The IWN is a collaborative effort of Treasury, DOJ, and DHS to create a consolidated Federal wireless network that can support interoperability with state and local public safety officials. IWN may be the future key to interoperability with other Federal agencies as well as state, local, and tribal partners. Interoperability could be improved through Treasury's participation in and connectivity to the IWN.

Public safety interoperability is a complex issue and a key concern of government entities at all levels. Policy and regulatory changes, some of which were recently made, are needed to facilitate interoperability and sharing in emergency situations. Standardized equipment, such as that being developed for narrowband land mobile radios under Project 25, can facilitate interoperability. Other technological approaches also are under development which may have significant impact on public safety interoperability.

Recent experimental programs, such as the WARN system in the District of Columbia, have demonstrated how partnerships among Federal, state and local governments which share spectrum and infrastructure facilitate interoperable communications.[250]

HF Spectrum Requirements

DHS expects a growing need for HF bandwidth for both fixed and mobile uses. The existing and future plans of several Federal agencies, as well as local and state first responders, echo this. Both Treasury and VA have initiated deployment of HF networks.

Broadband Spectrum Requirements

As did state and local public safety agencies, some Federal agencies underscore the growing need for broadband wireless networks for emergency uses. Broadband data networks might be needed for DHS's internal functions as well as interoperability. Broadband data networks may be a topic for additional deliberation with NTIA. Recent developments in using broadband in public safety incidents suggest that Federal agencies with similar missions should use this technology. No Federal spectrum is identified or structured specifically for this use.

Communications Satellite Spectrum Requirements

Commercial satellite services can provide very useful emergency communications, especially when terrestrial infrastructure is impaired or destroyed. Transportable earth stations can create an instant infrastructure in emergency situations. Yet, satellite infrastructure takes a great deal of time and money to implement. There are also some inherent delays in voice or data transmissions, which can cause communications difficulties.[251]

Several agencies use satellite telephones as a primary communications method for areas with a non-existent terrestrial communications infrastructure. For example, the USDA, and especially the USDA's Forest Service, utilizes commercial satellite services to provide coverage in remote areas where a land mobile radio system available 100 percent of the time may not be feasible or cost-effective for their fire-fighting and other public safety missions. Use of commercial satellite systems, however, also may be costly, on a per minute basis, but may support mission-critical

---

[250]*Supra* note 19. *See*, *Spectrum Policy for the 21st Century – The President's Spectrum Policy Initiative: A Public Safety Sharing Demonstration*, U.S. Dep't. of Commerce, NTIA, (June 2007), http://www.ntia.doc.gov/reports/2007/NTIAWARNReport.htm.

[251] Federal Communications Commission, *Report to Congress On The Study To Assess Short-Term and Long-Term Needs for Allocations of Additional Portions of the Electromagnetic Spectrum for Federal, State and Local Emergency Response Providers Appendix C* (December 19, 2005) (FCC Appendix C), *available at* http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-262865A1.pdf..

functions. In addition, the NSF uses satellite communications to provide medical and logistical public safety support to the U.S. Antarctica scientific bases.

Agencies also use satellite communications as backup communications in the event of degraded or destroyed terrestrial communications infrastructure. In particular, the VA procured 154 satellite telephones for emergency communications use after the terrorist attacks of September 11, 2001. The Coast Guard also uses satellite communications for search and rescue operations when other communications methods are unsuited for the task.

Commercial services help to fulfill a great deal of the agency satellite needs. For example, the Treasury sometimes uses commercial satellite telephones during enforcement and investigative activities, especially during joint operations for interoperability purposes. In addition, the Forest Service is deploying commercial satellite broadband technologies to assist with battling large fires.

In the aftermath of the September 11, 2001 attacks and Hurricane Katrina, satellite telephones played a vital role in public safety communications. Often they were the only available communications link. Satellites also provide programming distribution for telemedicine and associated emergency medical services, situational analysis imaging of disaster and emergency areas, meteorological and scientific analysis for emerging weather threats that may affect fire-fighting or homeland security interests, maritime communication (including search and rescue missions and other maritime law enforcement tasks), and asset tracking and navigation for emergency responders.

OTHER ISSUES RELATING TO PUBLIC SAFETY SPECTRUM USE

DHS may advocate for additional spectrum and adequate policy, rules, standards, and coordination to enhance interoperability at and between all government levels. DHS seeks more flexible rules permitting timely use of spectrum and common FCC/NTIA interoperability standards. Flexible channel plans would allow all public safety agencies to use Federal and non-Federal emergency frequencies without the need to undergo a lengthy approval process. DHS's goal is a seamless, nationwide public safety and incident response channeling plan spanning all public safety bands.

DOI would like to eliminate legacy regulations that impede innovations, including enhanced receiver standards that allow transmitters and receivers in separate networks to operate closer to each other, and allowing public safety local agency procurement of radio equipment through current contracts, enhancing the effectiveness of public safety joint interoperability operations.

Reform of the existing regulatory framework, including fostering an environment to allow improved spectrum sharing and interoperability between Federal and non-Federal activities, creating more flexible access rights as real-time requirements dictate, and ensuring the budget process allows for adequate funding for modernization directives could benefit DOJ.

NTIA and the IRAC have recently taken significant measures to address the need for non-Federal entities to use Federal public safety spectrum in appropriate situations. NTIA revised

Section 4.3.16 of the NTIA Manual to allow greater flexibility to non-Federal agencies to use the 162-174 MHz and 406.1-420 MHz bands for interagency law enforcement and incident response operations in coordination with Federal partners.

Appendix G - Testimony

Testimony of Congressman Lee Hamilton
Co-Chair of the National Security Preparedness Group
at the Bipartisan Policy Center

Hearing before the U.S. House Committee on Homeland Security
"The Attacks of September 11th: Where We Are Today"
September 8, 2011

Mr. Chairman, Ranking Member Thompson, and members of the Committee: Thank you for the opportunity to appear before you today. This Committee has been at the center of defending the country from the terrorist threat we face. You have provided sustained support for the implementation of the 9/11 Commission's recommendations. By doing so, you have done a great deal to ensure we are taking the difficult steps necessary to confront this determined enemy and protect Americans, our allies, and people throughout the world.

Today, I am appearing in my capacity as a Co-Chair of the Bipartisan Policy Center's National Security Preparedness Group (NSPG), a successor to the 9/11 Commission. Drawing on a strong roster of national security professionals, the NSPG works as an independent, bipartisan group to monitor the implementation of the 9/11 Commission's recommendations and address emerging national security issues. The NSPG has the following members:

Governor Tom Kean, Former Governor of New Jersey, Chairman of the 9/11 Commission, and Co-Chair of the National Security Preparedness Group;

The Honorable E. Spencer Abraham, Former U.S. Secretary of Energy and U.S. Senator from Michigan, The Abraham Group;

Peter Bergen, Director, National Securities Program at the New America Foundation;

Dr. Stephen Flynn, President, Center for National Policy;

Dr. John Gannon, BAE Systems, former CIA Deputy Director for Intelligence, Chairman of the National Intelligence Council, and U.S. House Homeland Security Staff Director;

The Honorable Dan Glickman, former Secretary of Agriculture and U.S. Congressman;

Dr. Bruce Hoffman, Georgetown University terrorism specialist;

The Honorable Dave McCurdy, Former Congressman from Oklahoma and Chairman of the U.S. House Intelligence Committee, President of the American Gas Association;

The Honorable Edwin Meese III, Former U.S. Attorney General, Ronald Reagan Distinguished Fellow in Public Policy and Chairman of the Center for Legal and Judicial Studies at the Heritage Foundation;

The Honorable Tom Ridge, Former Governor of Pennsylvania and U.S. Secretary of Homeland Security, Senior Advisor at Deloitte Global LLP, Ridge Global;

The Honorable Richard L. Thornburgh, former U.S. Attorney General, Of Counsel at K&L Gates;

The Honorable Frances Townsend, Former Homeland Security Advisor and Deputy National Security Advisor for Combating Terrorism; and

The Honorable Jim Turner, Former Congressman from Texas and Ranking Member of the U.S. House Homeland Security Committee, Arnold and Porter, LLP.

Last week, we released a report assessing the 9/11 Commission's recommendations, which I will discuss today.

I. Response to 9/11 and the Evolving Terrorist Threat

On September 11, 2001, violent Islamist extremists hijacked four commercial airplanes and turned them into weapons, killing nearly 3,000 people, and altering our society forever. These attacks exacted a devastating toll on so many families. Our government, the private sector, and daily lives have been profoundly transformed in the decade since the attacks.

Indeed, it is difficult to comprehend all the ways that our nation has changed. The most visible reminders of these changes are the airport screening protocols and being asked to report suspicious activity in public places. Drone strikes that kill terrorist operatives are front page news.

The less notorious changes that have occurred within the federal government are even more dramatic. We have seen the largest reorganization of the intelligence community since 1947. The intelligence budget itself has doubled since 2001. The creation of the Department of Homeland Security (DHS) was also a massive reconfiguration of government, combining 22 agencies into a new department, with a workforce of 230,000 people and an annual budget of more than $50 billion. In total, some 263 organizations have been established or redesigned.

The terrorist threat has changed as well. Today, unlike 2001, we must be concerned about Americans, such as Anwar al-Awlaki, playing prominent roles in al Qaeda's global network. For example, in Minneapolis, Minnesota, Muslim-American youth are being recruited in Somali communities to fight for an al Qaeda affiliate in Somalia.

We also have seen Americans recruited by Islamist extremists through Internet forums. Major Nidal Hasan, who killed 13 fellow soldiers at Fort Hood in Texas, was radicalized online. This self-radicalization is very difficult, if not impossible, for law enforcement to detect.

Our terrorist adversaries and the tactics and techniques they employ are evolving rapidly. We will see new attempts, and likely successful attacks. One of our major deficiencies before the 9/11 attacks was a failure by national security agencies to change at the accelerated rate required by a new and different kind of enemy. We must not make that mistake again.

The terrorist threat will be with us far into the future, demanding that we be ever vigilant. Changing circumstances require that we regularly reassess our priorities and expenditures to determine what is needed to defend our country and people.

II. Unfinished 9/11 Commission Recommendations

After a 20 month investigation, in July 2004, the 9/11 Commission made 41 recommendations for improving the nation's security. The vast majority of these were endorsed by both presidential candidates at the time and almost every member of Congress. On the tenth anniversary of the attacks, it is appropriate to reflect and take stock of where we are in national security reform – and what we have yet to achieve.

The good news is that substantial progress has been made in fulfilling many of the Commission's recommendations. Among these is the transformation of the intelligence community and breaking down barriers in information sharing.

Legal, policy, and cultural barriers between agencies created serious impediments to information sharing that prevented disruption of the 9/11 attacks. Therefore, the 9/11 Commission made a number of specific recommendations to improve information sharing across our government. Information sharing within the federal government, and among federal, state, and local authorities, and with allies, while not perfect, has considerably improved since 9/11. Those changes facilitated the successful capture of Osama bin Laden.

In our report last week, we highlighted nine unfinished 9/11 Commission recommendations. They demonstrate that we are not as secure as we could or should be. We urge immediate action to complete their implementation.

<u>Unity of Effort:</u> Unity of effort for the many actors at a disaster scene is critical because a well-coordinated response can save many lives. Our nation was not fully prepared for the size and complexity of the 9/11 attacks or for Hurricane Katrina.

While training under a uniform command structure has taken place, many metropolitan areas where multiple agencies respond to a disaster still have not solved the problem of who is in charge. Our concern is that the failure to resolve the basic building blocks of establishing roles and responsibilities, conducting catastrophic disaster planning, and exercising those plans would likely result in confusion at the scene of a major disaster.

<u>Radio Interoperability:</u> A prerequisite to establishing unity of effort is providing first responders the ability to communicate with each other directly, on demand, during an emergency. Incompatible and inadequate communications led to needless loss of life on 9/11.

To remedy this failure, the Commission recommended additional assignment of radio spectrum to improve radio interoperability for first responders. Despite the lives at stake, this recommendation has stalled in part because of a political fight over allocating 10 MHz of radio spectrum – the D-block – directly to public safety for a nationwide interoperable network. I want to recognize the leadership that Chairman King and Ranking Member Thompson and many members of this Committee have shown in supporting a bill that would allocate the D-block to public safety.

Efforts to achieve unity of effort and interoperable emergency communications must be dramatically accelerated. Congress needs to allocate the radio spectrum by passing legislation, and DHS and state and local governments must work together to address gaps in unity of effort and interoperability planning.

<u>Congressional Reform:</u> Congressional oversight of the government's homeland security and intelligence functions remains as dysfunctional as it was when we released our 2004 report. At that time, we said that strengthening congressional oversight may be among the most difficult and important recommendations. It still is.

Congress should immediately consolidate jurisdiction over the Department of Homeland Security within the House and Senate homeland security committees. This would avoid the duplication of having DHS respond to more than 100 congressional committees and subcommittees that have overlapping jurisdiction over the Department. In 2009 and 2010, DHS provided more than 3,900 briefings and DHS witnesses testified more than 285 times. This amounted to many thousands of hours of work, often duplicating efforts, and cost taxpayers tens of millions of dollars.

To improve intelligence oversight, the 9/11 Commission recommended a joint, bicameral Intelligence Committee or Intelligence Committees in each body with combined authorizing and appropriating authority. The basic issue is that agencies listen to the people who control their purse.

Currently, the House and Senate appropriations committees fund the intelligence agencies through their defense subcommittees and the DoD budget. At a minimum, separate intelligence subcommittees should be established to fund the intelligence community.

The House Permanent Select Committee on Intelligence announced a decision this year to include three members of the House Appropriations Committee to participate in Intelligence Committee hearings and briefings. This is a positive step, but there is more to do here.

<u>Civil Liberties and Executive Power:</u> We recommended in 2004 that a Privacy and Civil Liberties Oversight Board should be established to address and monitor privacy and liberty concerns across government. All five democrats and five republicans on the Commission felt strongly about this recommendation.

Since 9/11, the executive branch has received expanded authorities to collect information and to conduct surveillance. Even if these powers are being employed in a careful way respectful of civil liberties, the history of the abuse of such powers should give us pause and make us commit to ensuring that mechanisms are in place to protect our liberty. A robust and visible Board can help reassure Americans that security programs are designed and executed with the preservation of our core values in mind.

Although legislation was enacted to establish this Board, it has, in fact, been dormant for more than three years. To date, only two of the Board's five members have been nominated by the President and neither has been confirmed by Congress. The remaining three should be appointed immediately.

Director of National Intelligence: The establishment of the Director of National Intelligence and the National Counterterrorism Center to coordinate the activities of the intelligence community represented major progress in intelligence reform. In the last six years, the DNI has increased information-sharing, improved coordination among agencies, sharpened collection priorities, brought additional expertise into the analysis of intelligence, and further integrated the FBI into the overall intelligence effort.

But it still is not clear that the DNI is the driving force for intelligence community integration that we had envisioned. There have been four DNIs in six years. There also is ambiguity about the DNI's authorities over budget and personnel. Further clarity about the DNI's role is needed. This could be done through legislation or with repeated declarations from the president that the DNI is the unequivocal leader of the intelligence community.

Biometric Entry-Exit System: In 2004, the 9/11 Commission recommended that the federal government establish a comprehensive biometric system to track foreign nationals that enter and leave the country. DHS has deployed a system that checks all individuals who arrive at U.S. borders, ensures they are who they say they are, and helps prevent known terrorists from entering the country.

But the exit portion of the system has not been completed, so we do not know with any certainty who has left the country or remains here on an expired visa. Such a capability would have assisted law enforcement and intelligence officials in August and September 2001 in conducting a search for two of the 9/11 hijackers that were in the U.S. on expired visas.

Standardized Secure IDs: Eighteen of the nineteen 9/11 hijackers obtained 30 state-issued IDs amongst them that enabled them to more easily board planes on the morning of 9/11. Due to the ease with which fraud was used to obtain legitimate IDs that helped the hijackers embed and assimilate in the United States for the purpose of carrying out a terrorist act, the 9/11 Commission recommended that "the federal government set standards for the issuance of birth certificates and sources of identification, such as driver's licenses."

In 2008, detailed regulations were issued, setting standards and benchmarks for driver's license issuance. However, the states' compliance with DHS regulations for more secure driver's licenses has been delayed to 2013 by DHS. This delay in compliance creates vulnerabilities and makes us less safe. No further delay should be authorized, and instead the deadline should be accelerated.

Transportation Security: With significant federal funding, TSA has deployed large numbers of enhanced screening equipment used in passenger checkpoint explosives detection and checked bag screening. Unfortunately, explosives detection technology lacks reliability and lags in its capability to automatically identify concealed weapons and explosives. The next generation whole body scanning machines also are not effective at detecting explosives hidden within the body and raise privacy and health concerns that DHS has not fully addressed.

Our conclusion is that despite ten years of working on the problem, the detection system still falls short in critical ways with respect to detection. DHS must improve the way it sets screening technology requirements, works with the private sector to develop this equipment, and tests it in the field.

<u>Standards for Terrorist Detention:</u> Within days of his inauguration, President Obama signed a series of executive orders on the treatment of detainees and barring the CIA from using any interrogation methods not already authorized in the U.S. Army Field Manual. By bringing the U.S. into compliance with the Geneva Conventions and with international and customary law on the treatment of prisoners, the executive orders have substantially fulfilled our recommendation.

However, for too long, our nation's political leadership have delayed resolving the difficult problem of reconciling the rule of law with indefinitely detaining alleged terrorists, some of whom would no doubt attempt to do the nation grievous harm. So Congress and the president must decide on a comprehensive approach of how to handle these detainees that is grounded in the principles of fairness, respect for due process, and protecting the American people.

III. Conclusion

While we have done much since the attacks ten years ago and are safer than we were that day, there is much more to do. Political leadership from both parties and at all levels of government should renew their focus on completing implementation of the 9/11 Commission recommendations.

Our national security departments require strong leadership and attentive management at every level to ensure that all parts are working well together. Their dedicated workforces enacted much change and should be commended for their achievements in protecting the American people. But there is a tendency toward inertia in all bureaucracies. Vigorous congressional oversight is imperative to ensure sustained vigilance and continued reforms.

Statement for the Record
of
Greg Schaffer
Acting Deputy Under Secretary
National Protection and Programs Directorate
Department of Homeland Security

Before the
United States Senate
Homeland Security and Governmental Affairs Committee
Washington, DC

July 27, 2011

Introduction

Thank you Chairman Lieberman, Ranking Member Collins, and distinguished members of the Committee. It is a pleasure to discuss the Department of Homeland Security's (DHS) efforts to improve communications for emergency response providers and government officials. As we approach the tenth anniversary of the attacks of September 11, 2001, there is no shortage of reminders of the need for an effective and efficient emergency response framework to manage incidents and restore essential services in the aftermath of a disaster. As just one recent example of many, we are all aware of the tragic series of tornadoes that ripped through the nation's heartland this year, causing billions of dollars in damages, killing hundreds, and leaving thousands homeless.

A top priority for DHS is improving the communications capabilities of those who are often the first to arrive at the scene of a disaster site—the Nation's emergency responders. Public safety personnel must have access to reliable and instantaneous communications at all times to effectively coordinate response and recovery operations. The Department recognizes that establishing emergency communications is not solely a technology problem that can be solved with just the "right" equipment or the "right" communications system. All of the critical factors for a successful interoperability solution—governance, standard operating procedures, training and exercises, and integration of systems into daily operations *as well as* technology—must and are being addressed through the collective work of our programs.

Further, DHS believes that effective emergency communications requires continued partnering with the millions of emergency responders that are the first to arrive on the scene of an incident, as well as non-governmental organizations, the general public, and citizens of affected communities. We look forward to discussing our respective efforts and key accomplishments to make the nation more prepared in an all-hazards environment.

Emergency Communications Responsibilities

Within the National Protection and Programs Directorate's (NPPD) Office of Cybersecurity and Communications (CS&C) are two organizations that focus on different but converging areas of telecommunications in support of emergency operations: the Office of Emergency

Communications (OEC) and the National Communications System (NCS). OEC and NCS are critical to shaping national policy and both work with other DHS components, federal departments and agencies, multiple levels of government, and the private sector to improve communications capabilities and achieve their mission requirements.

OEC was established as part of the congressional response to the communications challenges faced during the September 11, 2001, terrorist attacks and Hurricane Katrina in 2005. OEC coordinates policy and assists in the development and implementation of operable and interoperable emergency communications capabilities for emergency responders at all levels of government, including federal, state, local, tribal, and territorial. OEC also led the development of the first National Emergency Communications Plan (NECP).

The NCS, transferred from the Department of Defense to DHS in 2003, was created by executive order under President Kennedy to support the telecommunications functions of the Executive Office of the President and all federal departments and agencies for Continuity of Government, Enduring Constitutional Government, and Continuity of Operations. Presidents Reagan and George W. Bush each issued executive orders that evolved the responsibilities and structure of the NCS. Today, the NCS is an interagency system comprised of the telecommunications assets of 24 federal departments and agencies, each with significant operational, policy, regulatory, and enforcement responsibilities. The NCS coordinates telecommunications preparedness, response, and restoration activities across its 24 member agencies through the NCS Committee of Principals, which consists of senior government officials from each of the 24 member agencies, ensuring a diverse representation across the NCS that includes the full range of federal telecommunications assets.

Office of Emergency Communications

The creation of OEC was an important step toward improving the communication capabilities of those who are often the first to arrive at the scene of an incident—the nation's emergency responders. Inadequate emergency communications have been a critical gap in our nation's preparedness, and previous efforts to address this issue were hampered by the lack of a strong partnership between the Federal government and the public safety community. In addition, the nation lacked an overarching strategy to guide emergency communications planning and build capabilities at all levels of government.

In the last four years, OEC has worked to fill many of these and other gaps, and we are seeing progress in several key areas that enable emergency responders to interoperate in an all-hazards environment. As part of its mission, OEC led a comprehensive nationwide planning effort with more than 150 stakeholders from the emergency response community to develop the NECP. This included significant feedback and coordination with the SAFECOM Executive Committee, the SAFECOM Emergency Response Council, and the National Public Safety Telecommunications Council. These stakeholder groups represent the interests of millions of emergency responders, as well as the state and local governments that public safety communications serves. Involving these groups from the beginning ensured that the plan took stakeholders' input into account and would be widely accepted in the public safety community.

In the almost three years since it was released, the NECP has been instrumental in defining communication priorities for public safety personnel at all levels of government. OEC has been driving implementation of the NECP in coordination with its federal, state, and local partners, and we are seeing measurable improvements with building capabilities and closing gaps identified in the plan for governance, training, operating procedures, and others, including:

- **Enhanced Statewide Coordination:** The creation of Statewide Communication Interoperability Plans (SCIPs), Statewide Interoperability Coordinators (SWICs) and Statewide Interoperability Governing Bodies (SIGBs) has improved coordination of emergency communications activities and investments throughout all 56 states and territories. Through the SCIP development and updating process, the SWICs, in collaboration with their SIGBs, have been effective in helping states define their communications needs and future investments and ensuring that federal funding is directed where it is needed most. In addition, OEC has conducted nearly 150 workshops over the past three years to assist states as they implement and update their SCIPs.

- **Common Plans, Protocols, and Procedures:** The use of standardized plans and procedures is driving improved command, control, and communications among emergency responder agencies in the field. To facilitate this, OEC and FEMA have worked with more than 140 jurisdictions, including Urban Area Security Initiative (UASI) regions, to develop Tactical Interoperable Communications Plans that document formalized interoperability governance groups, standardized policies and procedures, and emergency communications equipment inventories. States continue to develop these communications plans to cover additional regions.

- **Targeted Technical Assistance:** OEC has implemented a technical assistance strategy to ensure that all states and territories can request and receive its targeted, on-site emergency communications assistance, while also focusing support on the states and urban areas most in need. These offerings are tailored to support the priorities in each state's or territory's SCIP and the objectives of the NECP. Since 2008, the 56 states and territories have combined to request more than 750 individual technical assistance services from OEC for support with the development of governance structures, tactical and strategic planning, and a variety of engineering services.

- **Increased Training Opportunities:** OEC has developed Communications Unit Leader (COML) and Communications Technician (COMT) courses to improve emergency responders' proficiency with communications equipment and to assist them with coordinating roles and responsibilities during an incident or event. The COML program has been embraced by emergency responders nationwide, and OEC has trained more than 3,500 responders, technicians, and planners to lead communications at incidents across the nation, including local floods, blizzards, and wildfires. Trained COMLs have also contributed to recovery efforts throughout the United States, including the recent outbreak of tornados and massive flooding in the Midwest and Southeast.

- **Enhanced Border Communications and Coordination:** OEC has been actively working with our international partners at the Northern and Southern borders to improve cross-border interoperable communications planning, policy development, and operations communications. DHS recently awarded $25 million in grant funding to states and local communities under the Border Interoperability Demonstration Project—a one-time competitive grant program focused on developing innovative solutions to strengthen interoperable emergency communications along the U.S. borders with our partners in Canada and Mexico.

- **Improved Governance and Coordination:** OEC is working with federal, regional, state, and local agencies to increase coordination, information sharing, and oversight of interoperability through formal governance structures and partnerships. For example:

  - SIGBs have been created in every state and territory and include representatives from all levels of government to coordinate and support statewide interoperability. The State of Indiana, for example, has implemented an effective governance process for emergency communications through the Statewide Interoperability Executive Committee, which also serves as an advisory group to the State's Integrated Public Safety Commission. Many states have also implemented Regional Interoperability Committees to provide insight into the statewide strategy from an operational perspective.

  - OEC continues to receive insightful feedback and input from responders, associations, and emergency communications professionals through the SAFECOM Executive Committee, SAFECOM Emergency Response Council, and the newly chartered National Council of Statewide Interoperability Coordinators.

  - OEC recently instituted a Regional Coordination Program to strengthen collaboration and knowledge sharing with our stakeholders. OEC has established a Regional Coordinator in each of the 10 FEMA Regions, and they regularly participate in the SIGBS, the UASI interoperability meetings and their respective FEMA Regional Emergency Communications Coordination Working Groups.

  - The Emergency Communications Preparedness Center (ECPC) provides an inter-departmental mechanism to coordinate common solutions, streamline development of policy and plans, and jointly engage state, local, and tribal partners. The ECPC has achieved early successes through defining a strategic agenda that reflects shared member priorities and establishes issue-specific focus groups to drive immediate action. Key accomplishments include: (1) coordinated inputs on national policy, such as federal agency comments on the Federal Communications Commission's (FCC) National Broadband Plan; (2) developed and published recommendations for common federal grant guidance to synchronize emergency communications spending across more than 40 grant programs; (3) initiated efforts to drive capability and resource sharing through mapping and analyzing existing federal communications resources; and (4) implemented a clearinghouse capability and data repository to yield improved information sharing and coordination.

- To complement inter-governmental activities, OEC facilitates the Department's One DHS Emergency Communications Committee. This committee, comprising senior executives from the Office of the Secretary and the Components, provides a vital mechanism for maximizing the efficiency and effectiveness of the Department's emergency communications investments and activities. The One DHS Committee reached its most significant milestone recently with the creation of the first-ever unified One DHS Emergency Communications Strategy. The Strategy establishes a common vision "to ensure access to and exchange of mission-critical information across the Homeland Security Enterprise anywhere, anytime, through unified capabilities." The Strategy also sets goals for coordinating and improving emergency communications architecture, investment, governance, and operations.

Further, OEC and FEMA have partnered on the Interoperable Emergency Communications Grant Program (IECGP), which has been a primary vehicle for implementing the Department's interoperability goals. It has been instrumental in advancing the state of interoperable emergency communications throughout the nation, especially through its emphasis on:

- Establishing governance bodies that conduct strategic planning and prioritize investments;
- Supporting SWICs who ensure federally funded projects align to strategic plans; and
- Funding the implementation of NECP Goals, allowing DHS to measure progress in emergency communications capabilities nationwide.

OEC has also partnered with the DHS Science and Technology (S&T) Directorate to promote the effective use of Federal grant funding through the development of the SAFECOM Grant Guidance.

By focusing on these core capabilities—planning, governance, training, interagency coordination, and technology support—emergency response agencies are becoming more equipped to establish and maintain interoperable communications during response and recovery activities. One such example of how this is translating into "real world" success can be seen in Louisiana, where recovery operations have benefitted from years of governance planning, relationship building, and communications training. Using lessons learned and improvement efforts associated with Hurricane Katrina, Louisiana statewide officials are invested in improving interoperable and operable communications throughout the State, including the deployment of a robust statewide communication system for public safety use.

The State's standards-based system—called the Louisiana Wireless Information Network—has effectively supported interoperable communications performance during evacuation efforts for Hurricane Gustav and, more recently, the response to the BP oil spill. Interagency coordination was tested from the moment that the explosion occurred last April, and local responders were able to successfully communicate with each other and with the United States Coast Guard.

Louisiana also coordinated with surrounding states to create talk groups designated for the spill and effectively used trained COMLs to initiate the process of action planning and lead major communications efforts throughout operations, including connecting multiple systems from surrounding states. Of course our hope is that another large incident in the Gulf will never happen, but if it does, Federal, state, and local agencies have demonstrated that they are more prepared and coordinated than ever before.

NECP Goal Assessments

Implementation of the NECP has been a key driver behind much of our progress in improving interoperability. More than 85 percent of the NECP milestones have been achieved to date, and progress is evident in all of the NECP priority areas, such as governance, training, and coordination. Nevertheless, considerable work still remains to achieve the long-term vision of the NECP, in which emergency responders can communicate as needed, on demand, as authorized, at all levels of government and across all disciplines.

To move the nation even closer to that vision, OEC is engaged in a comprehensive, nationwide assessment of emergency communications capabilities as it implements the NECP Goals. When complete, this assessment will provide a detailed view of capabilities at the county or county-equivalent level in all 56 states and territories. This detailed look at emergency communications—the first of its kind—will generate valuable data for both DHS and the states to use to more effectively and efficiently focus future resources and improvement activities.

OEC recently completed the measurement of Goal 1 of the NECP, which focused on emergency communications capabilities in the nation's largest cities. To measure NECP Goal 1, OEC worked with the UASI regions to assess their ability to demonstrate response-level emergency communications during a real-world event in each region. This approach enabled OEC to evaluate their use of emergency communications in real-world settings and in an economically efficient manner.

The results have been encouraging. Based on the capabilities documented at each Goal 1 event, all 60 urban areas were able to demonstrate the ability to establish response-level emergency communications in accordance with NECP Goal 1. This illustrated how the significant organizational and technical investments made by the UASIs have improved their emergency communications capabilities in recent years. In fact, OEC saw measurable improvements over key gaps identified in the previous DHS assessment of these urban areas in 2007, the *Tactical Interoperable Communications Scorecards* report. Some of these areas of progress were the result of DHS programs and funding, including the following:

- **Grants:** The NECP Goal 1 results showed an increase in the number of UASI regions using Project 25 (P25) digital radio standards-based systems, which are designed to allow interoperability regardless of equipment vendor. The implementation of P25 systems has been a provision in DHS grant guidance for several years, including the SAFECOM grant guidance and the Public Safety Interoperable Communications Grant Program.

- **Training and Technical Assistance:** As previously discussed, OEC offers a COML training program that has trained more than 3,500 responders, technicians, and planners to lead communications at incidents across the nation. This program began in part as a response to gaps identified in the 2007 DHS Tactical Interoperable Communications Plans Tactical Interoperable Communications Plan (TICP) Scorecard assessment, specifically the lack of trained COMLs. During the NECP Goal 1 events, OEC found that a large majority of the UASI regions had assigned DHS-trained COMLs to handle planning and implementing multi-system communications for the event.

- **Exercises:** Almost all UASI regions reported that agencies within their regions are now holding communication-specific exercises, and approximately half of them reported that the agencies are holding these exercises on a regular basis. This represents significant progress over similar findings from the DHS TICP report in 2007, which concluded that "almost no [UASI] region had completed a communications-focused exercise before the TICP validation exercise."

OEC is currently in the process of implementing Goal 2 measurement, which calls for an assessment of emergency communications performance and capabilities at the county level (or county-equivalent level, such as parishes in Louisiana). This is a large undertaking, as there are more than 3,000 counties in the United States. OEC is working closely with the states and territories to complete this assessment by the end of this year and will be following up with them on how to use the results to update their SCIPs and more effectively utilize resources. From a DHS perspective, we believe the NECP Goals assessment will generate much needed capability data to more strategically direct federal and state emergency communications resources—including grant funds and technical assistance support—to where they are needed most.

Public Safety Broadband Network

Over the last decade, our Nation has made critical strides in strengthening overall security and national preparedness. The public safety community also has made significant progress improving emergency communications capabilities through enhanced coordination, planning, training, and equipment.

However, we have been limited by wireless technologies that were introduced decades ago. To fully achieve the vision of the 9/11 Commission, emergency responders must have an advanced, nationwide, inherently interoperable, public safety communications network. Recent developments in high-speed, wireless communications technology represent a new opportunity for emergency responders to have significantly greater operability, interoperability, and capability.

These broadband advancements can provide emergency responders with access to information that will improve their ability to safely and efficiently manage their daily activities and respond to all levels of emergency situations. For example, as President Obama stated in his State of the Union Address, these advancements can enable a firefighter to use a handheld device to download the design of a building before arriving at the scene of an emergency. These types of capabilities have the potential to save countless lives. That is why the Administration has been coordinating with the public safety community, the private sector, and Congress to promote initiatives for the deployment and development of a Nationwide Public Safety Broadband Network.

Earlier this year, President Obama outlined his commitment to the development and deployment of such a network for public safety, a key recommendation from the *9/11 Commission Report*. The Administration's program in support of such a network is a component of its Wireless Innovation and Infrastructure Initiative, which was outlined in its Fiscal Year 2012 Budget. The public safety elements of the Initiative include an accounting for the foregone auction revenues resulting from reallocation of the D Block for use in the public safety broadband network; $7 billion in direct financial support for network deployment; $500 million for development and testing of broadband public safety requirements, standards and software applications (to be administered through the National Institute of Standards and Technology); and $5 billion for support to rural broadband services, including public safety services.

The Administration is fully committed to working with Congress to ensure the passage of legislation that meets the critical national need of establishing a public safety broadband network. We appreciate the bipartisan Congressional leadership on this issue that crosses committees of jurisdiction, including Chairman Lieberman, Chairman Rockefeller, and Senator McCain. We are confident that through continued cooperation with Congress, we can deliver a network that meets the needs of America's first responders whom all Americans rely upon.

OEC has been extremely active in support of the President's Wireless Innovation and Infrastructure Initiative and helping prepare the nation's responders for the deployment of broadband. OEC has worked closely with its federal partners at the Departments of Commerce and Justice to help set the broad policy framework for the planned network, and has coordinated with its state and local partners to ensure the public safety community's requirements are fully represented in network broadband planning and implementation efforts. More specific examples include the following OEC broadband-focused programs and activities:

- **Policy and Planning**: OEC is preparing an addendum to the NECP for release later this year that will identify key broadband challenges and recommend near-term actions to foster the integration of broadband technologies and data capabilities. This addendum also will propose further measures to support current interoperability efforts and to maintain existing Land Mobile Radio communications capabilities until broadband technologies can support mission-critical communications for first responders.

- **Outreach and Coordination:** OEC is working with all of its stakeholder groups—including the SAFECOM Executive Committee and Emergency Response Council, National Council of Statewide Interoperability Coordinators, ECPC, and the One DHS Committee on Emergency Communications—to ensure the views and requirements of the public safety community are fully represented in broadband planning and implementation efforts.

    - OEC supports outreach efforts related to the development and deployment of a nationwide public safety broadband network to include operational requirements, funding, standards, spectrum requirements, and governance. This includes support for an Innovation Roundtable with representatives from government, associations, public safety, and industry. OEC is also supporting a committee of jurisdictions that received FCC waivers for early deployment of 700 MHz broadband systems as they begin their efforts to build networks. Through these efforts, OEC is continuing to emphasize the need for planning and good governance, since these elements of emergency communications have yielded progress to date.

  - OEC continues to coordinate with the emergency response community, preparing wireless broadband guidance documents for SWICs, urban area and regional interoperability coordinators, public officials and executives, and emergency responders to support current NECP initiatives on interoperability planning. OEC also continues to provide emergency response stakeholders up-to-date and comprehensive information about wireless broadband in the emergency response environment. In addition, OEC is working with states and jurisdictions to incorporate broadband initiatives into the SCIPs.

  - To increase coordination of federal efforts for broadband implementation, the ECPC is working to identify federal broadband requirements, preparing a consolidated view of emergency communications assets, addressing associated legal and regulatory barriers, developing departmental positions on pending broadband regulatory matters and rulemakings, and establishing standardized grant guidance and processes. The ECPC has identified the development of broadband standards and research and development as one of its strategic priorities for the coming year.

  - Concurrently, the One DHS for Emergency Communications Committee is providing consolidated departmental input into federal interagency efforts, as well as developing strategies for broadband technology migration (i.e., transition from current land mobile radio technology).

- **Grants:** OEC's current SAFECOM grant guidance, which includes input from state, local, territorial, and tribal responders, contains a number of key provisions pertaining to broadband deployment. Further, the *ECPC Recommendations for Federal Agencies: Financial Assistance for Emergency Communications*, a document for federal emergency communications grant programs, will include updated guidance concerning the deployment of the Nationwide Public Safety Broadband Network.

- **Technical Assistance:** OEC has developed a wireless broadband technical assistance offering for 2011 to assist state, local, territorial, tribal and regional users develop and improve their use of broadband technology in line with the vision of a nationally interoperable network. The offering, which can be tailored for each jurisdiction, will provide informational briefings, governance models and standard operating procedures, project planning, and engineering support.

In addition, NCS provides technical advice to OEC regarding communications standards to ensure the proposed public safety network is interoperable with the commercial communications networks. NCS also ensures that the priority functions for national security emergency preparedness function seamlessly as they operate between the networks.

National Communications System

Since its inception, NCS has developed programs and services to address the unique communications challenges associated with communications divestiture, deregulation, natural disasters, and terrorist attacks on our nation.

As the co-lead for Emergency Support Function #2 (ESF-2) – Communications, under the National Response Framework, NCS coordinates government and industry during planning for and response to disasters and major outages. The operational arm for communications activities is the 24/7 National Coordinating Center for Telecommunications (NCC), which coordinates emergency response operations supporting the National Response Framework. The NCC is, and has been, a consistent coordinating mechanism for managing efficient communications restoration and recovery activity for more than 25 years. The NCC also coordinates the communications assets of the NCS members to provide communications assistance during disasters (manmade or natural). During a response, the NCC also provides requirements priorities to industry partners.

NCS also manages government industry partnerships to assist decision-makers in understanding the risks to the Communications Sector. Under Homeland Security Presidential Directive 7, NCS is the sector-specific agency for the Communications Sector and coordinates government and industry partners under the Critical Infrastructure Protection Advisory Committee Act to reduce communications sector risk. NCS also manages the President's National Security Telecommunications Advisory Committee (NSTAC), which comprises 27 Chief Executive Officer-level members from communications, information technology, and defense corporations. Most recently, the NSTAC examined four scenarios designed to stress future 2015-level networks, and provided the President with recommendations for technology enhancements and government investments that would provide the best network resilience and recovery.

NCS capabilities include the following:

- **Operational Activities:** NCS develops and maintains NS/EP communications priority services programs, such as the Government Emergency Telecommunication System (GETS) and Wireless Priority Services (WPS), which provide users with priority on commercial networks. The GETS program is a White House-directed emergency telecommunications service managed by NCS. GETS supports over 274,000 federal, state, local, and tribal government, industry, and non-governmental organization personnel in performing their NS/EP communications missions by providing a robust mechanism to complete calls during network congestion from anywhere in the United States. Specifically, GETS provides 90 percent or more call completion rates when network call volume is up to eight times greater than normal capacity. For example, approximately 10,000 GETS calls were made with a 95 percent success rate during the 9/11 attacks, and 1,231 GETS calls were made with a 90 percent or more success rate during the 2003 Blackout.

WPS is a nationwide program that provides priority NS/EP telecommunications via selected commercial wireless carriers. This program enhances the ability of 108,000 NS/EP subscribers to complete calls through a degraded public switched telephone network during a crisis or emergency situation. WPS calls receive the next available radio channel during times of wireless congestion and helps to ensure that key NS/EP personnel can complete critical calls by providing priority access for key leaders and supporting first responders. WPS service provides authorized cellular users with the ability to have priority within the public switched telephone network as well as access to priority channels.

The Telecommunications Service Priority (TSP) Program authorizes and provides priority treatment of NS/EP telecommunications services. The TSP Program provides service providers with an FCC mandate for prioritizing service requests by identifying those services critical to NS/EP. For example, a telecommunications service with a TSP assignment will receive priority by the service vendor before a non-TSP service. The TSP Program has two components: restoration and provisioning. A restoration priority applies to telecommunications services to ensure restoration before any other services. A provisioning priority is obtained to facilitate priority installation of new telecommunications services in response to an emergency. In addition to daily operations, TSP Program Office personnel are notified of presidentially declared disasters; activation of the National Response Framework, ESF-2; and Continuity of Operations and Continuity of Government (COOP/COG) plans. TSP Program Office personnel are on call 24/7. TSP can save days to weeks on the time required to return wireline voice/data services, and there are more than 200,000 active TSP circuit assignments in support of NS/EP communications.

NCS continues to migrate GETS and WPS services to work across evolving networks. NCS works with industry to enhance and assure these priority programs are compatible with Next Generation Network (NGN) technology.

The Modeling, Analysis, and Technology Assessments team provides expertise in modeling and analyzing current and future protocols, algorithms, network designs, and capabilities that will impact priority service communications in legacy and NGNs. The modeling team also maintains a suite of specialized infrastructure analysis tools to provide critical infrastructure risk assessments for the communications sector in the event of a man-made or natural disaster. The assessments consist of the following:

- Providing technical analysis of current and next generation communications systems, new technologies, physical and logical architectures, and products related to communications network infrastructures.

- Determining new and emerging communications technologies under various congestion and failure conditions to identify vulnerabilities and predict performance of existing and next generation networks.

- Developing products to be used for COOP/COG functions during disaster response related to federal, state, local and tribal governments.

- **Standards Activities:** The NCS Standards Team is an active leader and contributor to various national and international standards developing organizations, ensuring industry-wide adoption of non-proprietary solutions for NS/EP preparedness telecommunications requirements.

  The Team provides leadership and representation in standards bodies to recommend standards that, when implemented in Internet Protocol-based networks, will provide capabilities to ensure national, state, and local leaderships' ability to communicate during times of crisis.

  The Third Generation Partnership Project, known as 3GPP, is focused on the technical aspects associated with provisioning priority services in Long Term Evolution networks and is being pursued under the enhanced Multimedia Priority Service project. In cooperation with the Alliance for Telecommunications Industry Solutions (ATIS), NCS is developing an End-to-End Next Generation Network GETS Service Call Flow Standard that specifies end-to-end call flows. ATIS is also developing the baseline text for an Emergency Telecommunications Service wireline access requirements standard. This standard details the network element requirements for wireline access in support of Digital Subscriber Line, Cable, Fiber, and Metro Ethernet.

- **National Response Planning:** NCS is working with federal, regional, state, and local agencies to increase communications coordination, information sharing, and oversight of emergency preparedness activities to improve response to man-made and natural disasters. NCS works with these entities to ensure a coordinated response through formal governance structures and partnerships.

International Interoperability

DHS is working with its international partners to enhance interoperable communications to bolster information sharing and coordination among law enforcement personnel around the world.

For example, the United States and Mexico are establishing a new cross-border communications network, which will improve incident response and coordination among participating federal, state, local, and tribal law enforcement and public safety personnel along the border. Installation is scheduled to begin this summer. DHS and Public Safety Canada also work together to enhance cross-border interoperable communications planning, policy development and operations through the annual Canada-U.S. Cross-Border Interoperable Communications Workshops.

Conclusion

The Department appreciates the Committee's support for our interoperable emergency communications activities. Thank you again for this opportunity to testify. I would be pleased to answer your questions.

MAJOR CITIES CHIEFS POLICE ASSOCIATION

POLICE EXECUTIVE RESEARCH FORUM

Public Safety Alliance
Dedicated to First Responders...First

Hearing before the Senate Committee on Homeland Security and Governmental Affairs

Ten Years After 9/11: Improving Emergency Communications

July 27, 2011
Dirksen Senate Office Building

Testimony of Charles H. Ramsey
Police Commissioner, Philadelphia Police Department
President, Major Cities Chiefs Association
President, Police Executive Research Forum

Good Morning Chairman Lieberman, Ranking Member Collins and all invited speakers and guests. Thank you for this opportunity to discuss a critical issue affecting all public safety and law enforcement organizations across our country, and our ability to serve the public. Having had 42 years in law enforcement, I have witnessed many important changes in emergency communications across police departments in three cities: first in Chicago for 30 years, then as Chief of the Metropolitan Police Department here in Washington, DC, for nine years, and now as Police Commissioner in Philadelphia for the past three and half years. I also have the privilege of serving as the President of the Major Cities Chiefs Association (MCCA) and the Police Executive Research Forum (PERF), both of which are members of the Public Safety Alliance (PSA).

The PSA is a coalition of the leading national public safety associations that represent every law enforcement, fire, EMS, emergency management agency and first responder organization in the country. I am here on behalf of first responders across this country to thank you, Mr. Chairman and Senator McCain for sponsoring bill S. 1040: The Broadband for First Responders Act of 2011.

We hope that you will also continue to work closely with Senator Rockefeller, Chairman, of the Senate Committee on Commerce, Science and Transportation, and sponsor of bill S.911: SPECTRUM Act, which was recently voted out of Committee for consideration by the Senate.

These bills fulfill an absolutely critical need. They allocate the D Block to public safety; provide the necessary funding to build out and expand the nationwide broadband network; and establish a governance structure in cooperation with state and local authorities.

Since September 11th, 2001, like many other jurisdictions around the nation, the Philadelphia region worked diligently to ensure adequate Local, State and Federal coordination for emergency communications. We established an "Interoperable Communications Committee" within our Southeast Pennsylvania Regional Task Force. Representatives from the five counties in the Philadelphia UASI, as well as seven additional regional counties from New Jersey, Delaware and Maryland comprise this task force. I'd like to thank Committee Member, Senator Tom Carper, for his assistance in strengthening homeland security in our region.

Let us be very clear in our mission: A terrorist attack or a major catastrophic event knows no municipal, state or federal boundary. Emergency preparedness spans across lines, and demands that law enforcement and public safety organizations across the country plan and coordinate their responses.

Mr. Chairman and Members of the committee, we have an extremely valuable opportunity in front of us to meet our needs in emergency communications. Seamless interoperability can only be achieved through a dedicated public safety nationwide broadband network. The allocation of the D block for public safety organizations, with adequate capacity, control and funding, is the only proposal that will meet the challenges and demands that we confront. As President of MCCA and PERF, I am here to support this solution, which serves law enforcement and public safety organizations, and most importantly, helps to protect the American people in the best way possible.

Commercial networks are not designed to serve our public safety needs. Past experience with major national disasters have demonstrated that these networks are not interchangeable with dedicated public safety networks. There are fundamental differences in the architecture that go to the heart of public safety communications. The Public Safety Alliance will strongly oppose any legislation or resolution that supports auctioning the D block. Public safety becomes both less public and less safe if we auction any part of the D Block to the highest commercial bidder.

We need the upfront funding to jump-start the investment and build out of the network, and to attract and encourage commercial interest and competition. We will partner with the private sector to leverage and make maximum use of the existing infrastructure, while managing operations locally through a national governance structure.

This Committee, the House Homeland Security Committee, the House Energy and Commerce Committee, and the Senate Commerce, Science and Transportation Committee have all held numerous hearings over the past two years on the proposed public safety spectrum and the nationwide broadband network. Congress has asked many good questions, and hopefully you now have the information you need to make an informed recommendation.

Our first responders, who put their lives on the line every day, must have the resources that they need to do their jobs more efficiently and effectively, armed with real-time data, video and other critical information. We can only accomplish this goal if we have the latest in mobile broadband technology that is fully interoperable on a Local, State, and Federal level. The ability to share mission critical information nationwide to coordinate and plan our response to emergencies depends on having this capability.

I would like to thank all of the Members of the Committee for your continued time and commitment to finding a solution that will meet the communications needs of our first responders, and will best serve the American people. What Congress decides now will dictate the future of our emergency response capabilities. Ten years after 9/11, we urge you to make the decision that will finally establish a dedicated nationwide public safety broadband network.

I am happy to answer any questions that you may have now. Thank you for your time and consideration.

Public Safety Alliance
Dedicated to First Responders...First

Written Testimony of Christopher Moore
Chief of Police, San Jose, CA

before the

House Energy and Commerce Committee
Subcommittee on Communications and Technology

Legislative Hearing to Address Spectrum and Public Safety Issues

July 15, 2011

International Association of Chiefs of Police I International Association of Fire Chiefs
National Sheriffs' Association I Major Cities Chiefs Association
Major County Sheriffs' Association I Metropolitan Fire Chiefs Association
Association of Public-Safety Communications Officials International
National Emergency Management Association I National Association of State EMS Officials

www.psafirst.org

Thank you, Chairman Walden and Ranking Member Eshoo. My Name is Chris Moore, and I am the Chief of Police for the San Jose, California Police Department. I am also one of the representatives of the Major Cities Chiefs Association (MCCA) to the Public Safety Alliance (PSA), which is a coalition of the leading national public safety associations that represent every law enforcement, fire, EMS, emergency management agency and first responder organization in the country.

My comments today will be brief and to the point. I am here on behalf of the PSA and the millions of first responders across this country to ask for your support of companion legislation to ***S.911: The Public Safety Spectrum and Wireless Innovation Act of 2011***, which was recently and overwhelmingly passed by a 21-4 bipartisan vote by your counterparts in the Senate Commerce, Science and Transportation Committee. This act does what public safety and state and local governments have requested Congress to sponsor and support as a top priority for more than two years. The legislation allocates the D Block to public safety, provides the necessary funding to build out the nationwide broadband network, especially in rural areas, and establishes the governance to oversee and manage the build out, maintenance, operation, and upgrade of the network for decades to come. We urge the committee to act now, as if a 9/11 or Hurricane Katrina event had happened just yesterday, and fulfill the last recommendation of the 9/11 Commission by allocating the D block, as recently endorsed in testimony this year by the co-chairs of that Commission.

The PSA is greatly encouraged by the Democratic Staff Discussion Draft that has been circulated by Congresswoman Eshoo and Congressman Waxman just this week, and urges swift introduction and Committee consideration to move this matter to the House floor. The PSA strongly believes that this language, as developed within the committee of jurisdiction, builds and improves upon H.R. 607, which has garnered bipartisan support of forty-three (43) co-sponsors so far this year. Indeed, legislation to allocate D block to public safety introduced in the House in the 111th Congress last year garnered 80 bipartisan co-sponsors.

Mr. Chairman and Members of the committee, PSA representatives testified before this committee as recently as April and May to press for a nationwide public safety broadband network. We emphasized that this is a unique, one-time opportunity to change our operations of the past, a past trying to make do by linking and patching together communications systems on thin slices of spectrum spread out over at least six different bands to acquire interoperability and spectral efficiency. We also stressed the need for adequate capacity of the network with public safety control and mission-critical capabilities from the outset. The PSA strongly believes that allocation of the D block with funding is the only proposal that establishes those baseline principles and needs. We need the upfront funding to jumpstart investment and build out of the network, and to attract and encourage commercial interest and competition. We will partner with the private sector to leverage and make maximum use of existing infrastructure, and we do support a strong governance structure as proposed in the Senate's bipartisan bill, S. 911.

Mr. Chairman, the Majority Staff Discussion Draft, as currently written, does not meet those conditions as we have outlined previously both in the House and the Senate. In fact, if passed into law as currently written, it would leave public safety worse off than it is today. Mr. Chairman, we cannot support this draft legislation. While the PSA is opposed to the Majority Staff Discussion Draft on key points including (1) the auction of the D block, (2) the multiple state licensing, (3) the governance structure, and (4) the lack of specified funding as the top priority of any auction proceeds, we do appreciate the ongoing dialogue and consideration of our views, experience and perspective. We are committed to continuing to work with the committee to bring a bill to the floor of the House and to achieve final enactment of legislation on this critical matter this year. Indeed, the PSA continues to seek enactment before the 10th Anniversary of the tragic events of 9/11.

Over the past two years, numerous hearings have been held on public safety spectrum and a nationwide public safety broadband network by this Committee, the House Homeland Security Committee, the Senate Homeland Security and Government Affairs Committee, and the Senate Commerce, Science and Transportation Committee. Congress has asked many good questions, and we in public safety and state and local government have worked hard to provide answers to your questions.

We are not here asking for the spectrum and funding to make a profit. We are not here asking for the spectrum and funding for some personal gain or reward. We are here asking for the spectrum and funding in order for us to better serve and protect the American people. We are here to make sure that our first responders, who put their lives on the line every day, have the resources they need to do their jobs more efficiently and effectively, armed with real-time data, video and other information that can only be accessed with the latest in mobile broadband technology.

I am here also to let you know that the Public Safety Alliance will strongly oppose any legislative action that will require auctioning the D Block. This is not an acceptable solution and it ignores everything we have been advocating long before 9/11. Auctioning the D Block will put the public's safety at risk and will considerably limit our first responders' ability to do their jobs.

We will continue to oppose legislative action that would abandon a single nationwide public safety broadband network, as well as action that would prematurely mandate conversion of our current 700 MHz narrowband voice spectrum to broadband. There are no current broadband LTE technology solutions that will replace our mission-critical voice networks or provide us with unit-to-unit talk capability absent access to a network.

In conclusion, I would like to thank you for your continued time and commitment to finding a solution that will meet the communications needs of our first responders for decades to come. The time has come for Congress to act and we urge you to pass legislation before the 10th Anniversary of 9/11. I will be happy to answer any questions you may have.

Chief Christopher Moore has been a police officer with the San Jose, California Police Department since 1982. He has worked in numerous assignments including Patrol, Patrol Administration, Street Crimes, Internal Affairs, Burglary, Community Services, Systems Development, Field Training and a tour as department spokesperson.

In 1999, Chief Moore was selected as a White House Fellow and served one year as Counsel to U.S. Attorney General Janet Reno. In 2004, Moore was awarded a Fulbright Police Research Fellowship to study police accountability at the London School of Economics and New Scotland Yard. He is a member of the Police Executive Research Forum (PERF) and the International Association of Chiefs of Police (IACP).

Chief Moore holds a B.A. from the University of California at Berkeley, a M.P.A. from San Jose State University, and a J.D. from Lincoln Law School of San Jose. He is a member of the State Bar of California and is a graduate of the California P.O.S.T. Law Enforcement Command College. Chief Moore is also a recipient of the SJPD Hazardous Duty Award.

STATEMENT OF
DEPUTY CHIEF CHARLES F. DOWD
COMMANDING OFFICER, COMMUNICATIONS DIVISION
NEW YORK CITY POLICE DEPARTMENT

BEFORE THE UNITED STATES HOUSE OF REPRESENTATIVES
COMMITTEE ON ENERGY AND COMMERCE
SUBCOMMITTEE ON COMMUNICATIONS, TECHNOLOGY AND THE INTERNET

JUNE 17, 2010

STATEMENT OF
DEPUTY CHIEF CHARLES F. DOWD
COMMANDING OFFICER, COMMUNICATIONS DIVISION
NEW YORK CITY POLICE DEPARTMENT

BEFORE THE UNITED STATES HOUSE OF REPRESENTATIVES
COMMITTEE ON ENERGY AND COMMERCE
SUBCOMMITTEE ON COMMUNICATIONS, TECHNOLOGY AND THE INTERNET

JUNE 17, 2010

Good morning Chairman Boucher, Ranking Member Stearns, and members of the Subcommittee. I am Deputy Chief Charles Dowd, Commanding Officer of the New York City Police Department's Communications Division. On behalf of Police Commissioner Raymond Kelly, I want to thank you for the opportunity to discuss with you today the critical need for Congress to act to ensure that public safety agencies will be able to communicate effectively, now and in the future.

I speak today not only for the NYPD and the City of New York, but also on behalf of virtually all of my colleagues in public safety, represented by the International Association of Chiefs of Police, the International Association of Fire Chiefs, the National Sheriffs' Association, the Metropolitan Fire Chiefs, the Major Cities Police Chiefs, the Major County Sheriffs' Association, the Association of Public Safety Communications Officials, and the National Emergency Management Association. We are joined in this effort by the National Governors Association, the National Conference of State Legislatures, the Council of State Governments, the National Association of Counties, the National League of Cities, the U.S. Conference of Mayors, and the International City/County Management Association, and to many others to list here today.

We jointly and urgently request that Congress take immediate action to reallocate and assign the 700 MHz D Block of broadband spectrum directly to public safety, rather than conducting a public auction of this vital resource. We strongly support a bi-partisan bill introduced by Representative Peter King. This legislation, H.R. 5081, currently co-sponsored by twenty-four members of the House, including Representative Anthony Weiner, Vice-Chair of this Subcommittee, would accomplish this purpose, and ask that Congress swiftly approve the bill and send it to the President for his signature.

In previous testimony before this committee we have said that broadband technology will create a paradigm shift in public safety communications. The events in

Mumbai India and more recently in Times Square confirm the need for information sharing capabilities that will allow first responders to be effective in preventing such attacks. The ability to share information in real time on a local, state, and federal level is critical to that goal.

The staff discussion draft referred to by this committee as the "Public Safety Act of 2010" is fatally flawed legislation in that it calls for the auctioning of the D Block. It does address some of public safety's needs by designating other spectrum for auction with the proceeds being dedicated to public safety broadband. It also talks about the establishment of an advisory board under the FCC. Such an entity could be successful if comprised of public safety practitioners as decision makers. The section on flexibility and sharing of broadband spectrum is an idea also generally supported by public safety as a way to fund and maintain the network. However, we cannot agree with the bill's intent to auction a resource as critical to public safety as the D Block.

Since the D Block spectrum is adjacent to the public safety broadband allocation it is uniquely desirable, as it can provide needed additional capacity simply and elegantly, without complicating network or handset design. Any alternative spectrum offered will be less desirable since additional components would be required which would dramatically increase the cost while reducing performance. Non adjacent spectrum blocks will not provide as much throughput capacity as the D Block, since greater efficiency is achieved through spectrum aggregation; this is the essence of broadband. If adding sites were the solution to a network capacity shortage, there would be no contention for, or market for the D Block. Rather than seeking additional spectrum, network operators would simply add more sites. This is clearly not the case.

Allocating the D Block to public safety will also provide first responders with the bandwidth required for the eventual migration of mission critical voice to 700 LTE as envisioned in the National Broadband Plan. The NYPD shares this vision and looks forward to a day when public safety users can share a nationwide network that supports voice, video, and data on an integrated wireless network and abandon the web of disparate legacy networks that impedes interoperability today. The D Block is the cornerstone of the mission critical voice foundation; without it, a mission critical voice and data network would not be possible. The City of New York filed a whitepaper with the FCC describing the spectrum needs for an integrated voice and data network several months ago. As public safety experts, we contend that filing provided proof that 10MHz. of dedicated spectrum is insufficient for public safety's needs during emergencies. We have submitted a copy for the record of this hearing.

Our experience with commercial network failures tells us we need network control to ensure guaranteed access and security. Commercial networks are simply not built to the same standards of reliability and survivability as our public safety networks. In a timely 60 Minutes broadcast last Sunday, federal officials criticized the utility industry for failing to safeguard their networks and systems from intrusion and malicious software. It was clear that the biggest impediment to protecting the power grid was the utilities' unwillingness to spend profits to secure their systems. What assurances do we have that commercial carriers will provide the adequate network security and robust buildout that public safety requires and demands? The nationwide network will be interconnected to confidential databases and secure servers that need to be protected. We need to have the option to build our own secure networks and manage the security of these networks ourselves.

The public safety organizations mentioned at the beginning of my testimony are unified in the goal of establishing for the first time a nationwide interoperable mission critical voice and data public safety broadband network. They are not motivated by profit or politics. Their only motivation is the ability to serve the public they are sworn to protect. On behalf of these organizations, I thank you for your attention to this important issue, and I will be happy to answer any questions from this Subcommittee.

Testimony before the United States House Homeland Security Committee

Hearing on "Public Safety Communications: Are the needs of our First Responders being met?"

Paul Fitzgerald
Sheriff, Story County, IA
First Vice President, National Sheriffs' Association

March 30, 2011

Good Morning Chairman King, Ranking Member Thompson, and Members of the Committee. My name is Paul Fitzgerald and I currently serve as the Sheriff of Story County, Iowa and as the First Vice President of the National Sheriffs' Association (NSA). The National Sheriffs' Association represents the 3,083 elected sheriffs across the country and more than 20,000 law enforcement professionals, making us one of the largest law enforcement associations in the nation. I am pleased to have this opportunity to appear before you today to discuss the critical issue of public safety communications and whether our current communication needs are being met.

Public safety communications has been a heavily debated and discussed issue over the last decade, particularly regarding the issue of interoperability among the nation's first responders. Since the tragic events of September 11, 2001, there has been a significant need among our nation's first responders to build and implement a robust nationwide public safety interoperable mobile broadband network that will improve our nation's homeland security and provide first responders with new interoperable communications technologies that are urgently needed. It is a need that was recognized and recommended by the 9/11 Commission - and it is the only recommendation from the Commission that has yet to be implemented.

The purpose of this hearing is to examine whether the needs of first responder communications are being met. Mr. Chairman, simply stated, public safety currently lacks the basic ability to interoperably communicate amongst each other. In my county of Story, the local law enforcement, fire, and EMS does have interoperability amongst each other within the county lines. We are the exception in Story County – not the rule. The vast majority of public safety agencies nationwide do not have these capabilities. Furthermore, although local Story County first responders have interoperability, we are still unable to communicate with state law enforcement on the same bandwidth nor are we able to communicate with local first responders in neighboring counties.

There must be a solution to this critical problem – and the NSA strongly believes that the solution lies in the implementation of a nationwide public safety interoperable broadband network.

For us to be successful, we need allocation of the 10MHz of spectrum known as the “D Block” to public safety and sufficient and sustainable funding to implement the network.

Both government and non-government studies have recently shown that public safety will not be able to obtain the necessary bandwidth and speed for our current and future needs based on 10MHz of broadband spectrum alone. The additional 10MHz of spectrum will be combined with the current 10MHz of broadband spectrum that is allocated to public safety to create a 20MHz block of spectrum to build a nationwide public safety interoperable broadband network. It should also be said that the D Block is located directly next to the current 10MHz of broadband spectrum that is currently licensed to public safety.

When built, the new nationwide public safety broadband network will be able to support a wide range of public safety; government; critical infrastructure and consumer applications such as voice, video, and internet services, including:

- transmitting high resolution pictures and building blueprints
- on-the-scene telemedicine services
- emergency vehicle telematics, such as GPS tracking
- incident command and control operations
- two-way video conferencing; video monitoring and broadcast services
- first responder health monitoring equipment
- emergency management programs
- large scale evacuation management
- public alerting and alarm services
- enabling next generation 9-1-1

These capabilities mean: that deputies will be able to receive real-time video on their patrol car laptops from videos within a school in the event of a school shooting, enabling deputies to identify where to quickly and most appropriately respond; that firefighters will be able to download building schematics of a burning building to determine safe points of entry; and the EMTs will be able to transmit patients' vital signs en route to hospitals – saving time and lives.

While current law mandates that the Federal Communications Commission (FCC) auction off the D Block spectrum – an auction that originally failed in 2008 - the NSA, along with numerous public safety; state and local intergovernmental; and industry partners, have urged Congress to swiftly pass legislation allocating the D Block directly to public safety.

Allocating the D Block to public safety enables public safety to know that the network and communication will be there when needed. Commercial networks do not and will not provide the reliability needed for mission critical public safety communications – we cannot agree to an unproven, untested theoretical plan that puts our first responders and citizens in real jeopardy.

Currently, there are two measures in Congress which not only allocate the D Block to public safety, but also provide for the funding necessary to create and implement a nationwide public safety interoperable mobile broadband network: **H.R. 607 - the Broadband for First Responders Act of 2011**, introduced by Chairman King and Ranking Member Thompson in the House; and **S. 28 – the Public Safety Spectrum and Wireless Innovation Act of 2011**, introduced by Senator Rockefeller in the Senate. These two bills take the critical steps necessary to assist the nation's first responders in our homeland security and emergency preparedness efforts.

It is rare, in fact almost unheard of, that law enforcement; fire; EMS; dispatchers; mayors; governors; county commissioners; state legislators all agree on an issue. However, the allocation of the D Block to public safety is that one issue. Moreover, the White House; the Department of Homeland Security; and the Department of Justice have all come out in strong and unified support of D Block allocation to public safety; thus, also recognizing the significant need to create this broadband network.

The time to act is now. The 10-year anniversary of 9/11 is quickly approaching; however, public safety continues to lack the ability to communicate effectively and efficiently amongst each other. Interoperability needs to be coast to coast; border to border; urban, suburban, and rural. The allocation of the D Block to public safety, as well as the allocation of funding needed to build the network, are the significant and necessary steps forward to achieving this goal; obtaining interoperability; and creating a nationwide public safety interoperable mobile broadband network.

I want to thank you for the opportunity to come before you today and discuss the critical issue of whether the current communication needs of public safety are being met. I would also like to thank Chairman King and Ranking Member Thompson for their strong leadership on the issue of D Block allocation and their unwavering support for the nation's first responders. I am happy to answer any questions the Committee may have.

CREATING AN INTEROPERABLE PUBLIC SAFETY NETWORK

Testimony of

Chief Jeffrey D. Johnson, EFO, CFO, MIFireE

Presented to the

SUBCOMMITTEE ON COMMUNICATIONS AND TECHNOLOGY

of the

COMMITTEE ON ENERGY AND COMMERCE

U. S. House of Representatives

May 25, 2011

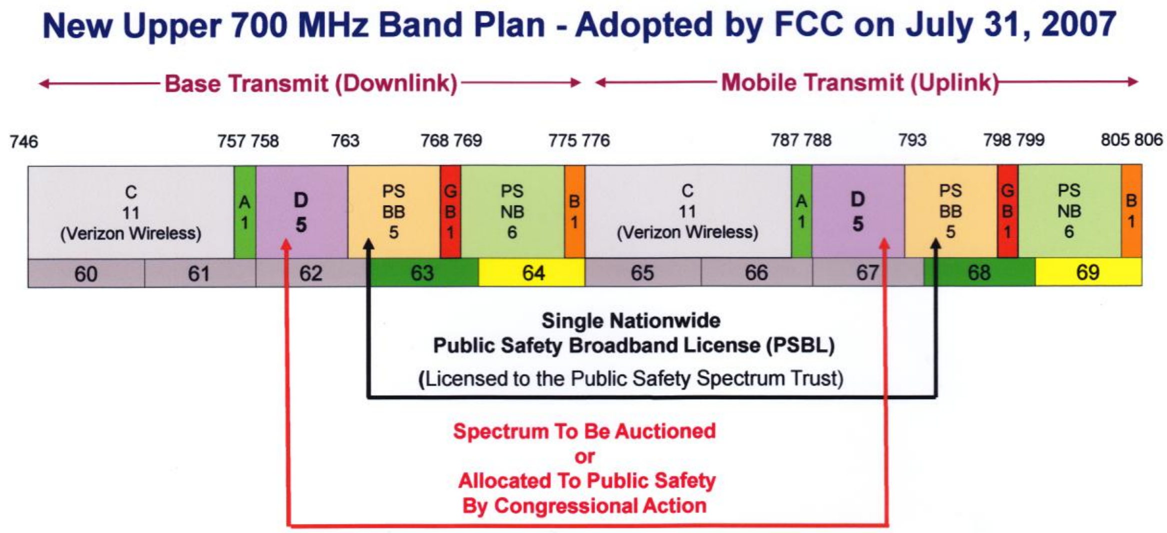
INTERNATIONAL ASSOCIATION OF FIRE CHIEFS • 4025 FAIR RIDGE DRIVE • FAIRFAX, VA 22033-2868
703.273.0911 • FAX 703.273.9363

Good Morning Chairman Walden, Ranking Member Eshoo, and members of the subcommittee. I am Chief Jeffrey Johnson, immediate past president of the International Association of Fire Chiefs (IAFC) and currently chief executive officer of the Western Fire Chiefs Association. I testify today on behalf of the Public Safety Alliance comprised of nine national associations representing the leadership of public safety: International Association of Chiefs of Police, International Association of Fire Chiefs, National Sheriffs' Association, Major Cities Chiefs Association, Metropolitan Fire Chiefs Association, Major Counties Sheriffs' Association, Association of Public-Safety Communications Officials-International, National Emergency Management Association, and National Association of State Emergency Medical Service Officials. We are also joined with the formal support of approximately three dozen other national associations and business entities including organizations representing over 2 million rank and file first, second and situational responders.

Over the past fifty years, America's domestic defenders have been allocated thin slices of spectrum in each new band as it became available. That is why, today, we have over 55,000 public safety agencies each operating its own mission critical radio system over six or more different radio bands. Connecting disparate frequency slices among and between agencies and jurisdictions to achieve interoperability requires the purchase, programming and deployment of electronic patching equipment operating under a governing protocol. This makes our goal of interoperability limited, difficult and expensive. After numerous major events and other significant disasters demonstrating communications failures, it is clear that a new model is necessary. What is required is a national architecture for public safety wireless communications.

To create and construct a nationwide public safety broadband network three key ingredients are requisite: the D Block of spectrum, federal funding, and a governance model.

To achieve our plan of connectivity coast to coast and border to border, the 10 MHz of "D Block" spectrum, currently slated for Federal Communications Commission (FCC) auction, must be added to the current 10 MHz of spectrum licensed to Public Safety in order to build out a 20 MHz network with sufficient capacity. The currently licensed public safety spectrum abuts the D Block and is perfect for public safety. (See band plan below):



Only with this particular spectrum configuration, and none other, can public safety be assured that it will have the ability to build the network it needs now and into the future.

Local control of the network by public safety agencies is a critical component to realizing a nationwide interoperable public safety broadband network. Utilizing the Long Term Evolution (LTE) technology standard with sufficient spectrum will ensure nationwide interoperability and allow us to effectively manage day-to-day operations, as well as major incidents. We cannot have commercial providers defining when an emergency is taking place and deciding which communications should have the highest priority. Public safety transmissions have to go through without delay. A "no service" signal is not acceptable. The lives of firefighters, the lives of medics, the lives of law enforcement officers depend on this. It is our responsibility.

Public safety expects to work with others and enter into public-private partnerships. We will work with state, county and local governmental agencies, federal partners, utilities, and other agencies including water and highways who respond to emergency incidents. *But, public safety must have control over the operation of the network in real time.* It cannot rely on commercial operators to provide its critical governance needs. Network control will give our responders the assurance that we will have full, pre-emptive priority over our spectrum on a "when-needed" basis.

The network must be "mission critical" at the outset. In the beginning, this system will handle only data and video. At some future time – years away – we believe there will be a transition to mission critical voice. We all need to take a long term view – to start out with sufficient spectrum so that we will have the ability to migrate to mission critical voice. This migration will happen only after the technology is developed and operationally tested, public safety has confidence in it, and it is affordable. Here are the key elements of "mission-critical:"

- The network must be hardened to public safety requirements. This means towers must be able to withstand the elements that might disable them. Towers in hurricane-prone areas and tornado alleys must be designed accordingly. Back up electrical power must be available 24/7. Redundancy is necessary.

- The public safety mission critical voice network must have the ability to broadcast and receive "one-to-one" and "one-to-many" and the ability to broadcast and receive without the network infrastructure being operative. This is called "talk around" mode. This is a command and control imperative. You know well that we operate under extremely hazardous conditions. If the network, for any reason, cannot provide connectivity, then we need the capability to communicate without the network. This is the essence of public safety communications.

- The network must have back-up capabilities in the event of network loss and these capabilities must be built to public safety requirements. We envision satellite capability for the network to be available when a tower is disabled or other crippling malfunction. Satellites also can cover remote areas that do not have towers. Our mission is geography-oriented, whereas commercial carriers are concerned with population.

Funding is important for the build-out of the public safety broadband network. The Public Safety Alliance supports the auction of spectrum by the FCC – from incentive auctions, auctions of the unsold portion of the Advanced Wireless Spectrum, or of designated federal spectrum - with the top priority that the derived proceeds are marked for funding the construction, operation and maintenance funds to construct the nationwide public safety network.

A governance structure must be created to manage and operate this new nationwide public safety broadband network. The PSA recommends the following guiding principles in establishing the governing body:

- Public Safety First Responder delegates constitute a majority of the governing body that sets the rules and enforcement for network operation and facilitates nationwide build-out. The governing body should include private sector representation from commercial and other stakeholder groups.

- The governing body would be established as an independent quasi-governmental entity with rule-making ability.

- The governing body has authority to enter into contractual agreements either public or private and the responsibility to delegate the authority to regional, state, tribal or local operators.

- Accommodations for regional or large entity sub-governance (local presence but under the single license for purposes of technology, etc.) to facilitate regional access and presence.

- The Public Safety 10 MHz and the D-Block would be combined under a single license issued to the governing body.

- The governing body would be authorized to receive and distribute federal, grant, and other funds designated for its operation and for creating and facilitating operation of the nationwide broadband network.

- The governing body shall assume the responsibilities of the current licensee.

A nationwide public safety broadband network will offer capabilities not now available to law enforcement, fire or emergency medical services (EMS). In the fire and EMS field, we envision firefighter/medics with a device which would deliver building diagrams, hydrant locations, maps, and highway information as well as video to provide instantaneous situational awareness of major fire and hazmat incidents in real-time to incident command. A future capability for emergency medical operations is the ability for digital imaging, portable EKGs and ultrasounds, field blood work, and video of an accident scene – all transmitted to an emergency department and a physician many miles away. Law enforcement plans to use the wireless broadband network for numerous applications from field fingerprint identification to the rapid access of criminal records. Sophisticated broadband applications are available to the general public today through commercial carriers, but are not available to public safety. It is time to bring mission critical public safety communications into the 21st Century.

The urgent need for this network has been vigorously voiced by public safety over the past several years. Congress has responded with the introduction of bi-partisan legislation in both the House and Senate supported by public safety. Hearings have been held. And, the administration has clearly voiced its support for the construction of this proposed network through its budget submission to Congress.

Public safety is supported in its quest for the D Block by the seven national associations representing state and local governments known as the "Big 7." We also are supported by the two top U.S. telecommunications carriers as well as the primary manufacturers of telecommunications equipment. Additionally, there are more than 150 state and local associations that join in this effort.

The National Commission on Terrorist Attacks Upon the United States (also known as "the 9/11 Commission") recommended in its report that an interoperable communications system be established for public safety. At a Senate hearing on March 30th , former commission chairman Governor Thomas H. Kean, said: "We support the immediate allocation of the D-block spectrum to public safety. We must not approach these urgent matters at a leisurely pace. We don't know when the next attack or disaster will strike. Further delay is intolerable. We urge the Congress to act."

Mr. Chairman, I thank you and this subcommittee for today's hearing on this vital issue. I will be pleased to answer any questions.

UNITED STATES SENATE

COMMITTEE ON

COMMERCE, SCIENCE, AND TRANSPORTATION

TESTIMONY OF

CHIEF ROBERT L. DAVIS

SAN JOSE POLICE DEPARTMENT

PRESIDENT

MAJOR CITIES CHIEFS ASSOCIATION

SEPTEMBER 23, 2010

Good Morning Chairman Rockefeller and members of the Committee.

My name is Robert Davis and I currently serve as Chief of the San Jose Police Department. I would like to thank you for this opportunity to appear before you today to discuss one of the most critical issues facing public safety that I have witnessed in my 30-year career—the creation of a nationwide, interoperable, wireless broadband communications network for public safety.

I am here today speaking as President of the Major Cities Chiefs Association (MCC). The fifty-six U.S. cities represented in MCC are America's centers of industry, transportation, education, and commerce. Our police departments provide public safety services to roughly forty percent of America's population.

I speak today not only for the Major Cities Chiefs, but also on behalf of virtually all of my colleagues in public safety across America. For the first time in my memory, law enforcement, fire, EMS, and other emergency service organizations have come together to speak with one voice on an issue that profoundly affects the security of our homeland. The organizations leading this effort include the Major Cities Chiefs; the International Association of Chiefs of Police; the International Association of Fire Chiefs, represented by my colleague on this panel, Chief Jeff Johnson; the National Sheriffs Association; the Metropolitan Fire Chiefs; the Major County Sheriffs Association; the Association of Public Safety Communications Officials; and the National Emergency Management Association. We are also joined in this effort by the National Governors Association, the National Conference of State Legislatures, the Council of State Governments, the

National Association of Counties, the National League of Cities, the U.S. Conference of Mayors, and the International City/County Management Association, and too many others to list here today. For those familiar with government, it is indeed a rare event that you will see all of these organizations come together and unite around a single issue.

We have come here with a straight-forward, yet urgent request. Almost a decade has past since the tragic events of 9/11, and our nation needs a mission-critical grade, interoperable, public safety, wireless broadband network controlled by public safety. After much discussion during the past two years, the leadership of public safety in this country has studied this issue thoroughly and concluded that the two most important things necessary to achieve this outcome are: 1) reallocation of the 700 MHz D Block to public safety and 2) adequate funding to build and maintain a national infrastructure. Mr. Chairman, your bill, S. 3756 provides us exactly what we need to make this network a reality. We thank you for your leadership, and we urge all of your colleagues in Congress to support your bill.

Why is the D Block so important? The answer is that this slice of spectrum is both uniquely suitable and desirable for public safety use. First, 700 MHz is the ideal spectrum for nationwide emergency operations. Signals in this band can penetrate walls and windows much better than the higher-band frequencies that some have suggested should be an alternative for public safety. Second, the D Block is immediately adjacent to the existing public safety broadband allocation, thus it can provide needed additional capacity simply and elegantly without complicating network or radio handset design.

Any alternative spectrum would be less desirable, since additional components would be required which would dramatically increase costs while reducing performance. Non-adjacent spectrum blocks will not provide as much throughput capacity as the D Block, since greater efficiency is achieved through spectrum aggregation. Indeed, this is the essence of broadband.

Moreover, the D Block is critical for the accessibility of information by our nation's first responders. New technologies such as automated license plate readers, in-field biometrics, medical telemetry, automated vehicle location, and streaming video only scratch the surface of the applications that will be carried by the national public safety broadband network.

I would like to take a moment to address the notion that has been advanced by some wireless carriers that they should control the network and allow public safety to lease it. This simply *will not* work for public safety. A dropped call on a cell phone is an annoyance; in an emergency it literally can mean the difference between life and death. Public safety personnel must have coverage whenever and wherever we respond in an emergency.

In closing, the public safety organizations mentioned at the beginning of my testimony are unified in the goal of establishing for the first time a nationwide, interoperable, mission-critical, public safety broadband network. We are not motivated by profit or politics. Our only motivation is the ability to serve the public we are sworn to protect.

On behalf of these organizations, I thank you for your attention to this important issue, and I will be pleased to answer any questions from the Committee.

Hearing on "Public Safety Communications: Are the Needs of Our First Responders Being Met?"

Responses to the Questions for the Record from the Honorable Laura Richardson

1. Under President Obama's recently announced Wireless Innovation and Infrastructure Initiative, the Administration proposed a one-time investment of $5 billion and reform of the "Universal Service Fund" to provide at least 98% of Americans with access to 4G high-speed wireless, including most rural communities. The administration believes that by extending a high-speed broadband network to rural communities, it will also be able increase interoperability among rural public safety agencies. What are some of the challenges that public safety agencies in rural communities face today without access to a wireless broadband network?

Answer: In an era where police, fire and EMS officials in areas all across the country are dealing with serious budget shortfalls, and subsequent layoffs, the inability to wirelessly transmit data in the form of an incident report back to central command is hampering how the remaining public safety officials efficiently manage their tasks.

Take for example, two police officers in two similar rural jurisdictions. Officer "A" does not have the ability to wirelessly transmit biometric information (i.e., facial recognition) relating to a traffic stop back to his central command post. With no knowledge of the suspect he just pulled over, the officer approaches the vehicle operator and engages the driver in a dialogue. The officer issues a ticket for excessive speeding, his fourth ticket of the day. The driver provides the officer with false information including a picture ID and insurance card. When the officer radios into dispatch the false information no warrants are found. He sends the speeder along his way, and then turns around to drive the 40 miles back to his central command to fill out the paperwork for the 4 tickets he issued that afternoon. Instead of being able to fill out his report on the road and send it wirelessly back to his dispatch, Officer A is forced to drive back to his station, leaving one less officer on the road. Meanwhile, the officer later finds out, through a more comprehensive and exhaustive hands-on query once back at dispatch that the driver who was issued the officer's last ticket had two outstanding warrants, including one for felony gun possession. Had the officer known this fact, he would have apprehended the suspect, and would have found a semi-automatic weapon lodged under the front seat of the vehicle. Later that day, the driver commits a serious crime using the illegally owned weapon.

Now we turn to Officer "B" who, under the same fact pattern provided above has access to a secure wireless broadband network. During a routine traffic stop, the officer is able to take a picture of the driver and transmit the picture along with the driver's license number and license plate of a violator she's pulled over back to the station on a public safety network. Seconds after the information is submitted, she receives a real-time message on her broadband radio informing her that the individual identified by the license number does not match the picture of that was transmitted and the driver has two outstanding warrants, one relating to a felony weapon possession. Not only does the officer now know that she must bring the driver in, but that she must use extreme caution when handling the situation. She is alone with the driver in a rural part of the state without any back up and the nearest officer is miles away. She flips the switch to the video camera in her car that instantly transmits to dispatch the video of the pending arrest. Dispatch is able see the situation as it unfolds and sends the necessary support to assist the officer in the apprehension of the criminal. The arriving units, which could be from a neighboring jurisdiction, are able to see the video because they are on the same interoperable broadband network, and know instantly how to control the situation and assist the officer as they arrive on the scene. This information not only may save her life, but she was able to bring in a dangerous individual off the street – all without having to run back to the main station to fill out a report.

In just this one example of how broadband in rural communities can benefit public safety agencies. It keeps public safety officers on the street rather than commuting to and from the station, it catches offenders who would otherwise go free, and, most importantly, it keeps our nation's first responders safe from possible harm.

2. At the time of the attempted auction of the D Block, the cost of building the mobile broadband network under the public/private partnership proposed by the FCC was estimated at from $18 billion to as much as $40 billion. If the D Block is reallocated to public safety, what do you estimate the total costs to be, including user equipment such as radios and other hand-held devices?

Answer: We agree with the FCC's more recent statement found in the March 2010 National Broadband Plan that states the build-out of a 10 MHz (or 5x5) broadband network will cost approximately $6 to $10 billion over the next five years. If the D Block is allocated to public safety, thereby creating a contiguous 20 MHz swath of spectrum, the additional effort and materials required to build out a 10 x 10 network would cost little-to-no more than the 5 x 5 network. It would only take a software upgrade to public safety's towers to transform a 5 x 5 network to a 10 x 10 network; no additional hardware would be needed.

With that information in mind, we believe that the numbers discussed in H.R. 607, S. 28, S. 1040 and the bipartisan discussion draft recently circulated by Senators Rockefeller and Hutchison that will eventually become S. 911 would *all* adequately help to cover the cost of the build-out and sustainment of the network. As for user equipment, including hand-held devices, we believe that the broadband market will allow for greater competition, a larger user base, open standards development and significant new applications that will drive down hardware costs and software application costs while realizing cost savings through more remote productivity, efficiency and effectiveness of field workers in public safety, as well as those secondary users of the network. Grants, state and local budgets, public- and private partnerships and secondary user fees will help to fund ongoing operational costs, and at some point, migration from LMR to broadband will free up additional dollars toward broadband.

It should be noted that with a 10 MHz network, the ability to leverage excess capacity with second and situational responders, including utilities and critical infrastructure companies becomes minimal-to-nonexistent. This is a critical part of the network equation. We not only want to be good stewards of the spectrum we use, but we want to be self-sustaining, and not come back to Congress seeking additional funding through the transition in future years. With 20 MHz of spectrum, there are a number of partnerships that become more viable, and that we believe we can leverage not only with the initial build-out, but during the life-span of the LTE data network. These partnerships will help create a constant and substantive funding stream to help continue the build out as well as maintenance of the network. With a 10 MHz system, public safety will be the only users on the network, and may likely have to look for additional funding to help maintain and operate the network in the future.

It should be noted that the cost of the radios and hand-held equipment is expected to be far less than the cost of current land mobile radio equipment. With open source standards that leverage commercial LTE technologies, we believe the cost of radios and hand-held equipment would be between $600 to $1,000 dollars, where as today, public safety agencies are paying on the average of $3,000 to $5,000 for their mobile radios and considerably more for their transmitters and receivers. Once fully implemented, the public safety broadband network would provide for considerable savings resulting from lower cost radios and new competition. The question should not be how much user equipment such as radios and other hand-held devices will cost but instead how much will local and state public safety agencies save as they transition to broadband.

Respectfully submitted by:

William D. Carrow

William D. Carrow, President
APCO International

Written Statement of the

Steve McClure
Director, Jackson County Emergency Medical Services

Before the

UNITED STATES SENATE COMMITTEE ON COMMERCE, SCIENCE AND TRANSPORTATION

Hearing on

Keeping Us Safe: The Need for a Nationwide Public Safety Network

Good morning Chairman Rockefeller, Ranking member Hutchison and Distinguished members of this committee. I thank you for the opportunity to speak about an extremely important subject-communications for public safety.

My name is Steve McClure and I am the Director of Emergency Medical Services for Jackson County, West Virginia. I have over 40 years of experience in the public safety sector. Jackson County Emergency Service (JCEMS) provides emergency ambulance service for Jackson County and JCEMS also provides non-emergency transports.

As you may know, Jackson County is located in the Mid-Ohio Valley and has a very diverse topography with an area of approximately 472 square miles and a population of nearly 30,000. The county lies just north of Kanawha County, and the Capitol City, Charleston, and includes a level I trauma center. Employment in the area ranges from manufacturing to farming and a major river borders the western part of the County. A major highway transects the county from north to south. All of these factors present Public Safety providers with a myriad of situations to deal with.

I am here today to specifically address an item that is at the very core of public safety communications in rural America. Effective communication between the requester of service and the dispatch center, between the dispatch center and public safety response agencies, and among the responders themselves is paramount to delivery of services. However, inherent problems in the way we communicate today must be addressed for the future of public safety communications and over the next several decades.

My paramedics can be within twenty minutes of the trauma center and can not communicate with anyone- radios won't work, cell phones have no signal and land lines in the area can be scarce.

Communications problems are not unique to my county or to West Virginia. From Hawaii to Florida, from Texas to Maine and all parts in between, we have the same problems. While many of these problems occur in rural and remote areas, a broken bone still hurts the same and a heart attack can still do the same damage in rural America as well as any urban setting.

How do we solve these problems and permit public safety officials to do a more effective job? Funding to build-out infrastructure and securing enough spectrum are two major steps forward that will provide all Americans with the quality of emergency services they expect.

The long-term vision for public safety should be to migrate land mobile radio (LMR) systems to a robust nationwide broadband network that can meet the mission critical and day to day operational needs of our nation's first responders. This will not happen overnight, and indeed, may be measured by decade, but the sooner we start building and testing, the faster we will realize the goal. The converged data and voice network must be at least as reliable as existing land mobile mission critical voice networks before public safety agencies would even consider migrating their voice communications to the broadband network. The broadband networks must be hardened to survive most natural and man made disasters and flexible enough to support a variety of government and commercial applications that will strengthen America's leadership in broadband services to all parts of this great nation.

With advances in technology, public safety has identified an increasing need to access data and video networks during all emergency incidents.

- Law enforcement needs access to streaming video, surveillance networks, criminal records, automated license plate recognition, and biometric technologies including mobile fingerprint and iris identification to prevent and respond to criminal activities.
- Fire services need access to building blue prints, health-monitoring sensors for firefighters, and GPS tracking systems to respond to fires in order to save lives.
- Emergency medical services needs access to telemedicine, high resolution video, and patient records to reduce the time it takes to deliver medical services at the scene of a incident such as a car crash on a highway.
- Critical infrastructure service providers need to be able to coordinate their responses to restore power and telecommunications services during large-scale incidents.
- Federal government patrol, investigative and other public safety operations, including the U.S. Marshal Service, Federal Bureau of Investigations, U.S. Customs Service, Federal Emergency Management Agency, Department of Homeland Security and U.S. Secret Service Uniformed Division, Department of Interior and U.S. Park Police, and various other federal agencies need to access data networks during everyday to large-scale incidents to coordinate Federal assistance with State and local response and recovery operations.[1]

[1] Department of Commerce, Federal Strategic Spectrum Plan (Mar. 2008), at 4, B137-139, B-143, available at http://www.ntia.doc.gov/reports/2008/FederalStrategicSpectrumPlan2008.pdf (increasing Federal broadband requirements) and Department of Commerce, A Public Safety Sharing

Above are just a few of the applications and services that will need to ride on a public safety broadband network. Unfortunately, the hard-reality of what applications and services will ride on the network depends greatly on the amount of spectrum that is available for the public safety broadband services. Many of the applications listed above require considerable bandwidth and speed and 10 megahertz (MHz) spectrum that is already allocated to public safety is not going to be enough.

In 2007, the FCC adopted a Report & Order[2] approving the issuance of a single nationwide license for 10 MHz of 700 MHz public safety spectrum re-designated for broadband use to deploy a nationwide public safety-grade broadband network. This allocation only meets the basic data needs for public safety. Most, if not all, of this spectrum will be consumed by local law enforcement and fire services. The 10 MHz of spectrum is insufficient to allow for high quality voice and video applications or the ability to provide access to other government and critical infrastructure services.[3]

One of the most important goals for public safety is to begin using voice applications on the broadband network within, but this requires a firm commitment from the commercial wireless industry to research, develop, and establish standards for the next generation of public safety communications equipment. Indeed, as Congresswoman Harman and others suggest in support of public safety, we do need the federal government to help create incentives and support for device R&D as a next priority once the D block is secured for public safety and adequate funding is established for build out and sustainment of the nationwide public safety broadband network.

I am proud to say that my Senator and your Chairman has answered public safety's call, and the public's expectation, to provide the funding and spectrum necessary with S.3756: The Public Safety Spectrum and Wireless Innovation Act of 2010.

The Obama Administration, Congress, the Federal Communications Commission, the Department of Homeland Security, the Department of Commerce, the Department of Justice, Department of Defense, and others need to work together with public safety to develop the appropriate spectrum and funding policy that will enable local, State, Tribal governments to build out their next generation of interoperable public safety wireless

broadband networks. I understand that a series of meetings have taken place over the past month, culminating with a two-day session out n Northern Virginia earlier this week. I am glad to know that the conversation includes an equal focus on rural America, and again know that Senator Rockefeller and others will continue to emphasize that public safety networks are built out based on geography, as well as population, to cover the entire jurisdiction, and so must the nationwide public safety network. Indeed, federal users will rely on those networks whether at a plane crash site, fighting a wildfire or dealing with a myriad of other everyday to large scale incidents in remote areas.

The Congress should consider the following six principals in developing the national policy for improving our nation's public safety communications systems.

1. Adequate amount of spectrum needs to be allocated to public safety to provide the highest speed and quality for transmitting mission critical voice, video and data services throughout their jurisdiction. The propagation characteristics of the spectrum that is allocated should allow for in building coverage and be able transmit a signal over large geographic areas.[4]

2. Local public safety agencies need to control the amount of spectrum resources they need to ensure broadband networks are able to provide voice, video, and data services to law enforcement, fire and emergency services.[5]

3. State and local public safety agencies need to have full control over who can access the network and what applications are authorized to operate on the network.

4. Auction proceeds from the sale of reclaimed radio spectrum for commercial wireless services should be allocated to help expedite the build out and continued maintenance and operation of a nationwide wireless broadband network.[6]

5. State and local government should be able to use current federal grant program such as the State Homeland Security Program (SHSP), the Urban Area Security Initiative Grant Program (UASI), the Metropolitan Medical Response System (MMRS), Emergency Management Performance Grants (EMPG), Interoperable Emergency Communications Grant Program (IECGP), Regional Catastrophic Preparedness Grant Program (RCPGP), and Preparedness Grants, the Community Oriented Policing Services (COPS) Technology, Department of Justice's State,

---

[4] 700 MHz Band Channel Propagation Model by the National Institute of Standards and Technology (NIST) http://www.nist.gov/itl/antd/emntg/700mhz.cfm.

[5] If public safety owns and operates its own network, or at a minimum holds the spectrum license in a public private joint venture network, they can exert greater control over future technical decisions that effect network performance. Additionally, ownership of the network allows public safety to exert influence over the network design and deployment to satisfy the immediate and future needs of public safety users. (New York City's 700 MHz Broadband Public Safety Applications And Spectrum Requirements White Paper)

[6] At least 25 megahertz of contiguous spectrum at frequencies located between 1675 megahertz and 1710 megahertz, inclusive, can be made available for immediate reallocation and auction.

Local, and Tribal Terrorism Prevention Training and Technical Assistance National Initiative Program, and the Justice Assistance Grant (JAG) Program to assist them in building out their public safety broadband networks.

6. Public-private partnership should be encouraged when possible however, public safety agencies must have the ability to deploy dedicated wireless broadband networks in their jurisdiction if commercial providers are unable to or unwilling to support their mission critical needs.

In order for public safety to be successful in deploying the next generation of broadband networks, Congress must act quickly to pass S. 3756: the Public Safety Spectrum and Wireless Innovations Act of 2010. This legislation will allocate sufficient dedicated spectrum and funding resources to public safety to build out the network. Without sufficient spectrum and funding, public safety will be relegated to using commercial networks that do not meet the mission critical needs of our first responders. Inability of by Congress to enact legislation to allocate additional spectrum to public safety will place the public's safety and safety our first responders at risk.

The goal for improving our nation's public safety communications systems should be to create a ubiquitous public safety broadband network in the 700 MHz band that meets all of public safety's needs in all geographic locations and across all jurisdictions and services.

A unique opportunity exists to change the paradigm of public safety communications where multiple frequency bands and incompatible technologies create obstacles to interoperability and perpetuate inefficiency. The ultimate goal and vision of the public safety broadband network is to learn from the mistakes of the past and plan for a future in which wireless broadband networks deployed on a common frequency band using a common technology platform provide public safety with the tools they need for the twenty first century.

I can vividly recall that day in July, 1969 as a young child I watched the first moon landing and heard Neil Armstrong issue those famous words, "that's one small step for man, one giant leap for mankind." If someone could communicate those words from almost 290,000 miles away, why can't we communicate with services that are 20 miles way? Radio towers and cell towers (infrastructure) in the Southern part of my county are nearly non-existent. This same problem manifests across the country and we need to fix it. Quickly passing S. 3756 is the key to fixing this problem.

Thank you again Chairman Rockefeller, Senator Hutchison and members of this committee and I look forward to any questions you might have. I leave you with some basic questions and answers to re-emphasize the main points from perspective.

Why does public safety need 20 megahertz of spectrum?

The allocation of 20 megahertz of spectrum will double the transmission speed and reduce the degradation of data especially in voice and video applications. The additional spectrum will also reduce the cost of build out of the network because less base stations will be needed to accommodate all the users and applications on the network.

The 20 MHz of spectrum will be sufficient to build equipment that will provide voice, video and data applications to first responders. Without sufficient spectrum, equipment manufacturers may not invest the money that is needed to develop new mission critical broadband communications equipment and applications. The amount of spectrum public safety can use will determine what equipment and applications will be available.

The 20 MHz of spectrum will also provide enough excess capacity on the network to allow for government and critical infrastructure[7] applications and also allow for commercial services to consumers, businesses, and schools and other key institutions in the most rural and underserved areas of the country.

To truly understand the broadband need of public safety we need to emphasize the key word *mobile*. So, what do we mean by *mobile*?

Mobile means that while traveling at 55 mph on the highway you are able to continuously access a broadband network to upload and download data. It means that if you are pursuing a suspect at 80 mph and have an in-car video camera you can upload the live video to the emergency communications center. It means that while you are responding to a fire you can download the blueprints to the burning building before you get to the scene. It means transmitting medical data to emergency medical personnel that are transporting a trauma patient and receiving a patient's vital statistics at the hospital before the ambulance ever arrives.

How do you solve the technological divide between public safety and commercial systems?

Public safety has endorsed Long Term Evolution (LTE) as the standard technology for the 700 MHz broadband networks. By adopting the LTE standard prior to any deployments, public safety is working to ensure systems are interoperable. Also by adopting the LTE standard, which has been adopted by the largest commercial carriers, public safety believes that there will be considerable cost savings in purchasing equipment that will operate on the network.

---

[7] Example of government operations include water, electric and gas meters read remotely taking advantage of the broadband wireless network and/or its backhaul infrastructure to improve accuracy and reduce labor costs. (New York City's 700 MHz Broadband Public Safety Applications And Spectrum Requirements White Paper)

The LTE technology will also allow public safety agencies to partner with commercial carriers in their regions to build out their networks. This is critical for geographic areas of the country that are serviced by the rural cellular carriers. By partnering with public safety, the rural carriers will be able to extend their coverage area and provide greater services to the customers.

It is important that one of the goals for improving our nation's public safety communications systems is to provide funding to encourage investment in research and development (R&D) of new communications equipment and applications that can be integrated in to the public safety broadband network.

One of the most immediate R&D efforts should be to develop LTE equipment and applications that can meet the mission critical voice communications needs of public safety. To ensure competition and reduce the cost of the equipment, the Federal government should provide funding for the R&D program.

LTE technologies must be capable of providing two-way, peer-to-peer, and one-to-many transmission of mission critical voice communications services for first responders. Delay in developing the standards for these types of applications will prolong the migration of LMR systems to next generation of public safety communications technologies.

Commercial carriers are moving rapidly to develop a single standard for voice over LTE technology (VoLTE).[8] This standard however is being primarily developed for voice communications that are similar to existing cellular services. As these standards are developed, public safety needs to work closely with commercial partners to ensure VoLTE is going to be compatible with the voice communications applications that will be used by public safety. By building commercial equipment that can support public safety's voice communications needs the cost of purchasing equipment could be greatly reduced.

Before public safety agencies are able to migrate their LMR systems to broadband networks, they must be assured the network will be capable of providing the same level of services as their existing LMR networks. A key component of this is the availability of sufficient spectrum to provide the highest quality of voice communications to first responders.

---

[8] GSM Association adopts carriers' framework for LTE voice: VoLTE made its debut late last year, when AT&T, Verizon and several other telecom companies and device manufacturers joined forces to help develop voice and SMS standards for LTE. The coalition of telecom and tech companies originally banded together to create joint voice and SMS standards that would avoid potential fragmentation of LTE services and thus ensure that voice-capable LTE devices could operate on different networks. (http://www.networkworld.com/news/2010/021510-gsma-one-voice.html)

TESTIMONY OF:

DR. DENNIS MARTINEZ, CHIEF TECHNOLOGY OFFICER

RF COMMUNICATIONS DIVISION

HARRIS CORPORATION

BEFORE THE UNITED STATES HOUSE OF REPRESENTATIVES

COMMITTEE ON ENERGY AND COMMERCE

HEARING ON:

CREATING AN INTEROPERABLE PUBLIC SAFETY BROADBAND NETWORK

MAY 25, 2011

GOOD MORNING, MR. CHAIRMAN AND MEMBERS OF THE COMMITTEE. FIRST, LET ME THANK THE COMMITTEE FOR INVITING ME TO TESTIFY ABOUT KEY STEPS THAT MUST BE ACHIEVED RAPIDLY TO DEVELOP AND DEPLOY A TRULY INTEROPERABLE PUBLIC SAFETY WIRELESS BROADBAND NETWORK (PSWBN).

LET ME BEGIN BY INTRODUCING YOU TO THE HARRIS CORPORATION. HARRIS IS AN INTERNATIONAL COMMUNICATIONS AND INFORMATION TECHNOLOGY COMPANY SERVING GOVERNMENT AND COMMERCIAL MARKETS IN MORE THAN 150 COUNTRIES. HEADQUARTERED IN MELBOURNE, FLORIDA, THE COMPANY HAS APPROXIMATELY $6 BILLION OF ANNUAL REVENUE AND MORE THAN 16,000 EMPLOYEES — INCLUDING NEARLY 7,000 ENGINEERS AND SCIENTISTS. HARRIS IS A LEADING GLOBAL SUPPLIER OF SECURE RADIO COMMUNICATIONS PRODUCTS AND SYSTEMS, AND EMBEDDED HIGH-GRADE ENCRYPTION SOFTWARE, FOR THE MILITARY, GOVERNMENT, AND PUBLIC SAFETY. HARRIS IS A PIONEER IN THE DEVELOPMENT OF INTERNET PROTOCOL (IP) BASED NETWORKS FOR PRIVATE RADIO AND BROADBAND APPLICATIONS, AND SUPPLIES INDUSTRY-LEADING NARROWBAND, MULTIBAND, AND BROADBAND NETWORKS, SERVICES, AND DEVICES.

I SERVE AS THE CTO OF HARRIS CORPORATION’S RF COMMUNICATIONS DIVISION, AND I ALSO CHAIR THE FCC’S EMERGENCY RESPONSE INTEROPERABILITY CENTER (ERIC) PUBLIC SAFETY ADVISORY COMMITTEE

(PSAC) SECURITY AND AUTHENTICATION WORK GROUP. I HAVE SPENT MOST OF MY CAREER BRINGING ADVANCED TECHNOLOGIES TO PUBLIC SAFETY, HOMELAND SECURITY, NATIONAL DEFENSE, AND OTHER MISSION CRITICAL MARKETS. IN THESE ROLES, I HAVE LEARNED HOW LEVERAGING CONTINUAL TECHNOLOGY INNOVATION CAN HAVE A PROFOUND IMPACT ON OUR NATION'S ABILITY TO PROCURE AND DEPLOY STATE-OF-THE ART PRODUCTS AND SERVICES FOR THESE MISSION-CRITICAL MARKETS. I HAVE ALSO SEEN THAT A ROBUST SUPPLY CHAIN FOSTERED BY APPROPRIATE BUSINESS MODELS AND MULTI-SOURCE PROCUREMENT PRACTICES MUST BE IMPLEMENTED TO ENSURE THAT ALL LEVELS OF GOVERNMENT WILL PROCURE THESE CAPABILITIES IN A COST-EFFECTIVE MANNER.

TODAY, SMART PHONES, SUPPORTED BY A VAST ECO-SYSTEM OF APPLICATION PROVIDERS, HAVE UNLEASHED THE CAPABILITIES OF MODERN 3G AND 4G WIRELESS BROADBAND NETWORKS. THESE CAPABILITIES LITERALLY ARE REVOLUTIONIZING THE SOCIO-ECONOMIC STRUCTURE OF THE WORLD. HOWEVER, OUR NATION'S FIRST RESPONDERS, CHARGED WITH PROTECTING LIVES AND PROPERTY, ARE NOT YET ABLE TO TAKE FULL ADVANTAGE OF THIS CAPABILITY. PUBLIC SAFETY FINALLY MUST BE ENABLED TO LEVERAGE BROADBAND TECHNOLOGY IN WAYS THAT WILL SIGNIFICANTLY ENHANCE THEIR ABILITY TO PERFORM THEIR MISSIONS. IT IS TIME FOR OUR NATION TO BUILD THIS HARDENED NATIONWIDE INTEROPERABLE WIRELESS BROADBAND NETWORK ON DEDICATED SPECTRUM IN THE 700 MHZ BAND. WE SUPPORT THE

REALLOCATION OF D BLOCK SPECTRUM TO PUBLIC SAFETY AND WE COMMEND CONGRESS' CLOSE EXAMINATION OF THIS CRITICAL ISSUE.

TWO KEY INGREDIENTS - POLICIES OPENING THE 700 MHZ BROADBAND SPECTRUM TO PUBLIC SAFETY AND THE AVAILABILITY OF BROADBAND TECHNOLOGY - ENABLE CONSTRUCTION OF A NATIONWIDE INTEROPERABLE PUBLIC SAFETY BROADBAND NETWORK. IT IS NOW TIME TO FINALIZE TWO IMPORTANT ELEMENTS: GOVERNANCE AND PROCUREMENT.

THE PSWBN, PROPERLY DEPLOYED, WILL SERVE FIRST RESPONDERS AND GOVERNMENT AGENCIES CHARGED WITH THE PUBLIC SAFETY MISSION, WHICH INVOLVES STATE, LOCAL, FEDERAL, AND TRIBAL ORGANIZATIONS. ESTABLISHING A GOVERNANCE STRUCTURE TO ENSURE NATIONWIDE INTEROPERABILITY AMONG THESE ORGANIZATIONS IS ESSENTIAL.   WHILE WE AS A NATION MUST PROVIDE <u>NATIONWIDE INTEROPERABILITY</u>, CARE MUST BE TAKEN TO ENSURE THAT THE <u>OPERABILITY</u> REQUIREMENTS UNIQUE TO INDIVIDUAL STATE, LOCAL, FEDERAL, AND TRIBAL ORGANIZATIONS ARE ALSO SATISFIED.   FOR EXAMPLE, THE CITY OF LOS ANGELES, BY VIRTUE OF ITS SIZE, POPULATION, AND GEOGRAPHIC LOCATION HAS NEEDS THAT DIFFER FROM A SMALLER IN-LAND LOCATION SUCH AS BEND, OREGON. A KEY GOAL IN CREATING A RELEVANT GOVERNANCE STRUCTURE FOR ALL IS TO ENSURE THAT THESE STAKEHOLDERS HAVE SIGNIFICANT PARTICIPATION IN THE ESTABLISHMENT PROCESS AND OPERATION OF THE GOVERNANCE STRUCTURE.

THE ACTIVITIES OF THE FCC IN PAST AND ON-GOING RULE MAKINGS ARE TO BE APPLAUDED AND CAN SERVE AS A MODEL FOR GOVERNANCE IN MATTERS OUTSIDE THE JURISDICTIONAL AUTHORITY OF THE FCC. A GOVERNANCE ENTITY MUST OVERSEE ALL PHASES OF THE NETWORK LIFECYCLE; DESIGN, IMPLEMENTATION, OPERATIONS, AND MAINTENANCE. THE GOVERNANCE ENTITY MUST ENSURE IMPLEMENTATION OF A PROCUREMENT MODEL THAT ENSURES THE ACHIEVEMENT OF NATIONWIDE INTEROPERABILITY.

IN THIS REGARD, WE MUST FINALIZE A REGULATORY FRAMEWORK AND DETERMINE WHAT INTEROPERABILITY MEANS AS A THRESHOLD MATTER. CONSIDERABLE TIME AND EFFORT HAS BEEN SPENT DEFINING INTEROPERABILITY FROM TECHNICAL AND OPERATIONAL PERSPECTIVES. <u>HERE WE WANT TO DISCUSS WHAT INTEROPERABILITY MEANS FROM THE PERSPECTIVE OF GOVERNANCE AND PROCUREMENT.</u> INDEED, TECHNICAL AND OPERATIONAL CONSIDERATIONS ALONE WILL NOT YIELD THE DESIRED OUTCOME.

WE CAN DRAW FROM MANY EXAMPLES OF SUCCESS IN THE COMMERCIAL WORLD. AS CONSUMERS AND USERS OF COMMERCIAL TELECOMMUNICATION PRODUCTS AND SERVICES, WE UNDERSTAND THIS ISSUE. IT MEANS WE CAN PURCHASE THESE ITEMS IN AN OPEN AND COMPETITIVE ENVIRONMENT – OUR EXPECTATIONS DRIVE THE NEED NOT ONLY FOR INTEROPERABILITY, BUT EVEN MORE, FOR INTERCHANGEABILITY. WE CHOOSE THE DEVICE THAT SUITS OUR

NEEDS, ON THE NETWORK THAT PROVIDES THE SERVICE WE REQUIRE, IN A HIGHLY COMPETITIVE AND INNOVATIVE OPEN MARKET. MARKET DEMANDS DRIVE COMMERCIAL SERVICE PROVIDERS TO DELIVER INTEROPERABILITY. IN TURN, COMMERCIAL SERVICE PROVIDERS DRIVE INTERCHANGEABILITY THROUGHOUT THEIR SUPPLY CHAIN TO ENSURE UNINTERRUPTED AVAILABILITY OF COMPETITIVE AND INNOVATIVE PRODUCTS. THEIR BUSINESS SUCCESS REQUIRES HAVING MULTIPLE SOURCES WITHIN THEIR SUPPLY CHAIN. THIS IS THE MODEL THAT SHOULD GUIDE THE GOVERNANCE STRUCTURE AND PROCUREMENT PROCESS FOR THE PSWBN. IN THIS WAY, INTEROPERABILITY BECOMES THE OUTCOME, NOT JUST A MANDATE.

INTEROPERABILITY THEREFORE SHOULD BE THE CAPABILITY FOR PUBLIC SAFETY ORGANIZATIONS TO PROCURE THE BUILDING BLOCKS OF THE NETWORK AND DEVICES THAT ARE INTERCHANGEABLE AND CAN BE USED TOGETHER REGARDLESS OF BRAND OR NETWORK LOCATION. THIS DEFINITION WILL ALLOW EVERY FIRST RESPONDER TO COMMUNICATE ACROSS THE NATION AND WILL DRIVE SUPPLIERS TO THIS INDUSTRY TO PRODUCE HIGHLY INNOVATIVE AND COST-EFFECTIVE PRODUCTS THAT PUBLIC SAFETY AGENCIES CAN PROCURE AND DEPLOY WITH CONFIDENCE – THAT WILL “PLUG AND PLAY”. CREATING THIS MARKET DYNAMIC WILL REQUIRE FUNDING MECHANISMS THAT DRIVE THE PROCUREMENT PROCESS TO ENFORCE THIS PROCUREMENT MODEL.

FINALLY, IT IS VITAL TO ENSURE ECONOMIC VIABILITY FOR THE PSWBN. THE NEED FOR FEDERAL FUNDS TO LAUNCH THIS INITIATIVE IS WELL UNDERSTOOD. ALSO UNDERSTOOD ARE THE CHALLENGES IN DOING SO UNDER CURRENT ECONOMIC CONDITIONS. HERE WE WANT TO BRIEFLY DISCUSS HOW THOSE CHALLENGES CAN BE ALLEVIATED.

(1) THE BENEFIT OF LEVERAGING TECHNOLOGY SUPPLIED BY A VAST ECO-SYSTEM OF MANUFACTURERS WILL GENERATE LONG-TERM SAVINGS ON AN ON-GOING BASIS. THIS DIFFERS MARKEDLY FROM THE RATHER LIMITED SUPPLY BASE AVAILABLE TO PUBLIC SAFETY TODAY FOR CONSTRUCTING ITS MISSION CRITICAL NETWORKS.

(2) FULLY REALIZING THOSE SAVINGS WILL REQUIRE MANDATING COMPETITIVE BUSINESS PRACTICES AS DISCUSSED EARLIER. PROCUREMENT OF NETWORK ELEMENTS, WHERE ECONOMIES OF SCALE CAN BE REALIZED, WILL ENABLE IMPLEMENTATION OF BEST COMMERCIAL PRACTICES THROUGH MULTI-SOURCING.

(3) BUILDING THIS NEXT GENERATION PUBLIC SAFETY NETWORK ON 4G TECHNOLOGIES WILL ENABLE CONVERGENCE – A SINGLE NETWORK WITH DEVICES THAT CAN SERVE THE NEEDS FOR VOICE COMMUNICATION AND A MYRIAD OF MISSION-CRITICAL APPLICATIONS. THE COST SAVINGS FROM CONVERGENCE WILL BE LARGE AND WILL FURTHER ENSURE LONG-TERM ECONOMIC VIABILITY OF THE PSWBN.

IN CONCLUSION, THE PUBLIC SAFETY BROADBAND NETWORK WILL BRING UNPRECEDENTED CAPABILITIES TO OUR NATION'S FIRST RESPONDERS AND GOVERNMENT AGENCIES THAT SUPPORT THE PUBLIC SAFETY MISSION. BUILT UPON A COMPETITIVE MARKET AND THE LATEST BROADBAND STANDARDS, AND SUPPORTED BY A LARGE EMERGING ECO-SYSTEM, THE PSWBN WILL ENABLE NATIONWIDE INTEROPERABILITY TO BECOME A REALITY.

ONCE AGAIN, MR. CHAIRMAN, I APPLAUD THE COMMITTEE'S LEADERSHIP ON THESE ISSUES AND GREATLY APPRECIATE THE OPPORTUNITY TO TESTIFY TODAY. I LOOK FORWARD TO FURTHER WORKING WITH YOU TO MAKE THE INTEROPERABLE PSWBN A REALITY.

###

Motorola Solutions, Inc.
Hearing on "Interoperable Public Safety Communications"
Before the Subcommittee on Communications and Technology
Committee on Energy and Commerce
U.S. House of Representatives
May 25, 2011

SUMMARY OF TESTIMONY

- Motorola Solutions, Inc. has served the public safety community for over 82 years and remains steadfast in its commitment to providing reliable, state-of-the-art equipment and innovative solution. We are committed to open standards-based technologies and have committed significant resources to assist industry efforts to embrace open standards. We concur with the Committee's desire to ensure a robust competitive marketplace.

- Reallocation of the 700 MHz D block spectrum from commercial to public safety use is necessary to ensure that our first responders have the capacity available to effectively respond to day to day wide scale incidents.

- Public safety currently has 24 MHz of spectrum in the 700 MHz band. Of this total, 12 MHz is reserved for narrowband uses and is not able to provide the types of video and data communications described above. That leaves public safety with only 10 MHz of spectrum to accommodate mobile broadband applications – a total that the FCC has confirmed is inadequate for wide scale emergency response.

- Allocating D block to public safety means a contiguous 20MHz of spectrum that could result in significant savings-doubling public safety's network capacity with a small increase in deployment costs.

- Costs would be less with an allocation of the D Block to Public Safety than an auction of the D-Block due to unanticipated LTE service charges, lack of unlimited data plans, priority service expenses, and RF interference mitigation – in addition to decreased communications independence for public safety.

- The Phoenix Center, a nonprofit organization that studies broad public policy issues with a specialty in telecommunications reported that while the issue is complex, the economics weigh in favor of allocating the D Block to public safety.

- Adequate spectrum is necessary before broadband networks can accommodate mission critical voice traffic in addition to the video and data traffic.

- While more needs to be done, public safety has made great strides in achieving interoperability since 9/11. This is due in large part to the focus state and local government has placed on the need to improve public safety first response to major incidents, as well as the adoption and implementation of the Project 25 (P25) standard supporting public safety interoperability.

Statement of Paul Steinberg

Chief Technology Officer

Motorola Solutions, Inc.

Hearing on "Interoperable Public Safety Communications"

Before the Subcommittee on Communications and Technology

Committee on Energy and Commerce

U.S. House of Representatives

May 25, 2011

Thank you, Chairman Walden, Ranking Member Eshoo, and other members of the Subcommittee for this opportunity to testify on the topic of Interoperable Public Safety Communications.

My name is Paul Steinberg and I am the Chief Technology Officer at the newly independent Motorola Solutions, Inc., which, following its split from Motorola Mobility this past January continues to focus on the needs of the public safety community.

For almost 20 years, I have been fortunate to work at Motorola with an extremely knowledgeable and talented team of people who help deliver innovative and best-in-class technologies to our customers. Prior to being appointed CTO in January 2011, I was Chief Architect for Integrated Command and Control and Private Broadband Solutions for Public Safety Systems.

Motorola Solutions, Inc. (formerly Motorola, Inc.) has been committed to innovation in communications and electronics for over 82 years. The Company is headquartered in Schaumburg, Illinois, employs over 25,000 people in over 65 countries globally. Motorola pioneered mobile communications in the 1930s with car radios and public safety networks. We made the equipment that carried the first words from the moon in 1969. We commercialized the first handheld portable scanner in 1980. Today, as a global industry leader, excellence in innovation continues to shape the future of the Motorola.

COMMITMENT TO INTEROPERABILITY

Motorola has served public safety continuously over these eight decades, and the company is proud of this history. Motorola has remained committed to the marketplace and has listened closely to public safety's needs, providing public safety with reliable, state-of-the-art equipment and innovative solutions.

Motorola agrees that a robust competitive marketplace can help provide interoperable services – including broadband services – to public safety in a cost-effective manner. Motorola is actively competing in the marketplace today to help public safety realize its vision to have a truly interoperable nationwide broadband network. We are committed to open standards-based technologies and have committed significant resources to assist industry efforts to embrace open standards.

REALLOCATION OF THE D BLOCK

Reallocation of the 700 MHz D block spectrum from commercial to public safety use is necessary to ensure that our first responders have the capacity available to effectively respond to wide scale incidents. But it is important to remember that it is not only the catastrophic events that can benefit from this increased spectrum. Day to day situations ranging from an overturned gasoline tanker on the beltway; a tornado in Joplin, Missouri or a hostage situation at a school can all benefit from the enhanced situational awareness and command and control that is enabled through this additional spectrum.

As FCC Chairman Genachowski has stated as recently as last Thursday at the TIA conference, broadband spectrum needs are predicted to grow 35 times in the next few years. Consumer use and demand for broadband applications is experiencing explosive growth as are the public safety's broadband requirements.

We recently confirmed this by working with public safety officials on a network capacity analysis to understand how broadband networks can enhance emergency response and better protect the safety of all involved. This involved performing a step-by-step assessment of the communications requirements through an emergency situation's "life cycle" – from start to SWAT team deployment to resolution.

During these "stress test" scenarios, we found that a network infrastructure based solely on the existing 10 MHz public safety allocation will struggle to provide the necessary capacity. Adding the additional 10 MHz D-Block spectrum would effectively double the network capacity for public safety and improve incident response.

Commanders directing response teams need real-time situational awareness at the onset. A tightly coordinated response means all those involved need access to the right information at the right time. With multiple agencies working together to resolve the incident, interoperability is crucial to creating one shared operational view for maximum coordination. Content, including streaming video, can be sent to a command and control center from various cameras on the scene. This video can be collected, monitored and redistributed to first responders in the field with command and control serving as the "director" of the content, dynamically choosing the views and information to propagate from multiple sources.

In many incident scenarios, video information is critical. Live video feeds from well-placed specialty units, overhead aircraft, and remotely operated robots provide different angles and views that can be streamed in real time over a Public Safety broadband network. Using a wide area broadband network is much safer, and quicker to activate, than deploying a temporary local network. More importantly, it allows officers to immediately survey the area in its crucial first stages without the risk and complexities associated with establishing local communications equipment.

Applications such as real time hot-spot video to reduce crime in certain areas; in-car video that is live and networked back to command and control centers; detailed building diagrams relayed to firefighters; video of trauma patients being fed directly to emergency rooms; and wild fire thermal and weather imaging, are just a few of the broadband applications that can make a difference to public safety and the communities they serve. More spectrum is required to make this a reality, not just in certain communities, but for public safety throughout the country.

Public safety currently has 24 MHz of spectrum in the 700 MHz band. Of this total, 12 MHz is reserved for narrowband uses and is not able to provide the types of video and data communications described above. That leaves public safety with only 10 MHz of spectrum to accommodate mobile broadband applications – a total that the FCC has confirmed is inadequate for wide scale emergency response. In contrast, commercial service providers have requested an additional 500 MHz of spectrum for advanced wireless services.

Allocating the D block to public safety means a contiguous 20 MHz of spectrum that could result in significant saving – doubling public safety's network capacity with only a small increase in deployment costs. The build-out of one network that leverages existing infrastructure will cost far less at the $6.5 billion estimated by the FCC than the build-out of a second network on a non-adjacent spectrum. There is also potential for additional cost savings if other agencies are permitted to use the public safety network.

Motorola believes that costs would be less with an allocation of the D Block to Public Safety than an auction of the D-Block due to unanticipated LTE service charges, lack of unlimited data plans, priority service expenses, and RF interference mitigation – in addition to decreased communications independence for public safety. Further, should commercial carriers operate in the D block spectrum, we believe it will be necessary to use guard bands to protect current public safety operations in the adjacent spectrum and the economic impact of such guard bands could potentially be billions of dollars.

In terms of the economic value of the spectrum from a public safety standpoint, a report was issued earlier this year by the Phoenix Center, a nonprofit organization that studies broad public policy issues with a specialty in telecommunications. The Phoenix Center report concludes that while the issue is complex, the economics weigh in favor of allocating the D Block to public safety.

Highlighting that the allocation of D Block to public safety creates a unique opportunity to create a contiguous 20 MHz of spectrum for public safety broadband, the report notes that the spectrum can create significant value to public safety – which the Phoenix Center values at $2 to $6 billion.

Alternatively, assigning 10 MHz in the future in some other spectrum band would cost about $4 billion in additional deployment costs and offer inferior performance. In contrast, the Phoenix Center notes that at best, the D Block would bring auction revenues in the $1 to $3 billion range, and probably much less. Service obligations or conditions that may be placed at auction could reduce that revenue by as much as $1 billion.[1]

KEY TECHNICAL CONSIDERATIONS

Motorola concurs with the vision that LTE is the right technology for the interoperable Public Safety 700 MHz broadband network. With adequate spectrum available, a properly designed public safety network based on standardized LTE technology can support our nation's first responders in the field with the information-rich applications like high speed data and video which is currently unavailable. LTE also provides the opportunity to leverage the larger economies of scale of commercial technologies.

[1] "Public Safety or Commercial Use? A Cost/Benefit Framework for the D Block, "Phoenix Center Policy Bulletin No. 26, March 2011, George S. Ford, PhD., Lawrence J. Spiwak, J.D.,

Eventually, the integration of voice and data services over the LTE platform could provide public safety even greater operational benefits. To achieve this goal, additional efforts must be directed at addressing two critical areas.

First, public safety officials and the vendor community must collaborate to define and develop key features associated with mission critical voice on narrowband networks in order to enable their support on broadband networks.

Public safety users demand a lot from their voice communications service. For example, they expect to be able to complete a one-to-many group call set up immediately at the push of a button. They also demand to be able to communicate directly "unit-to-unit" when they are beyond network coverage.

Public safety voice systems must provide high availability to users with multiple levels of back-up. Finally, the devices must be rugged and suitable for public safety environments. These features are currently supported as fundamental operational features in existing standards-based, mission critical voice networks. Public safety users identify these as key features that must be replicated before voice services can be transitioned to broadband networks.

However, the current LTE standards do not cover these mission critical voice services, only consumer telephony services, as the 3GPP standards committee is primarily driven by the requirements of the cellular carriers and have not addressed these services. Various federal and public safety customer associations are in the process of specifying the requirements and examining the alternatives for standardization in the various standards setting bodies. There is no firm commitment on how and when these critical standards will be completed.

Second, adequate spectrum is necessary before broadband networks can accommodate mission critical voice traffic in addition to the video and data traffic. If the majority of public safety voice operations are transitioned to the 700 MHz broadband network, then the network must support the necessary voice capacity in a completely consistent and dependable fashion as is the case with narrowband networks today. Technical evaluations are underway to better understand the impact that moving narrowband communications from multiple frequency bands would have on the 700 MHz broadband public safety network.

The timelines to address these two considerations are subject to debate with some arguing that standards could be completed in as little as three years, while others argue that achieving the full feature and performance requirements within a coordinated set of standards could take at least five to seven years, with a completion timeframe of eight to 10 years for development of production grade equipment and deployment.

The length of time the process can take is driven by the selection of a willing standards body, creation of the necessary standards for mission critical, public safety voice services, and then followed by the product development, certification and field testing to ensure the operational requirements of public safety are being met.

SYSTEM ARCHITECTURE AND GOVERNANCE CONSIDERATIONS

From an architecture standpoint, we believe the best approach is one that deploys regionally distributed infrastructure as this will ensure more robust physical site redundancy and disaster tolerance. This would mirror the architecture currently used in commercial carrier networks where regional LTE core components are deployed into major markets to reduce overall costs.

LTE cores are actually a small fraction of overall deployment costs and will be reduced even further as low cost small scale cores emerge. The initial costs of locating cores closer to the local traffic are recouped by reduced backhaul costs. This helps avoid routing traffic from regional cell sites to a far distant core and back to the local agencies over a national backbone.

Regionally based cores also allow a first responder to access both local and national applications from anywhere within the nationwide network as needed and as authorized. Interoperability with the 911 PSAP (Public Safety Answering Point), current land mobile systems and Next

Generation 911 would also be enhanced as the network and functions are locally/regionally based.

At the same time, while we support a regional architecture approach, we believe these regional cores should share a common nationwide network identification number which will essentially result in creating a single nationwide network by enabling all devices to operate in all areas of coverage of the public safety common architecture. The only roaming required would be from the public safety network onto commercial networks.

In addition to the network ID numbers, there are other architectural and governance components that also are best managed at the national level. These include, for example, the national IP backbone, the roaming clearinghouse to commercial carriers, the deployment of national interoperability applications, and the establishment of a nationwide network numbering plan and regional partitioning.

Overall, this regionally-focused architecture model may involve varying levels of national control that will impact overall system governance. We anticipate the model to be formed through collaboration between Congress, the Administration, state/local government and public safety users. As someone who designs public safety systems, I would just note there are good operational reasons to consider some level of regional control as this will best reflect how public safety operates today through local/regional Computer Aided Dispatch and incident command structures.

PROGRESS ON NATIONWIDE INTEROPERABILITY

While more needs to be done, public safety has made great strides in achieving interoperability since 9/11. This is due in large part to the focus state and local government has placed on the need to improve public safety first response to major incidents, as well as the adoption and implementation of the Project 25 (P25) standard supporting public safety interoperability.

Today, 27 states have deployed, or are in the process of deploying, statewide P25 public safety communications systems, with another four states planning upgrades of their existing statewide networks to the standard. There are a total of 187 P25 state and local systems in place today, a majority of which have been built with the help of federal funding. The vendor community has invested heavily in the standard -- the Project 25 Technology Interest Group identifies in excess of 12 vendors that produce compliant mobile and portable subscriber equipment. Some examples of "best practices" in public safety interoperability include the following:

State of Michigan

The Michigan Public Safety Communications System (MPSCS) is P25 standards-based 800 MHz radio system that enables first responders to communicate with each other regardless of jurisdiction or geographic location. There are over 1200 local, state and federal agencies representing over 60,000 first responders utilizing the MPSCS system today.

State of Ohio

MARCS (Multi-Agency Radio Communication System) is an 800 MHz radio and data network that provides statewide interoperability to its subscribers throughout Ohio. There are currently over 33,000 voice units and over 1,800 mobile data units on the MARCS system with over 700 public safety and public service agencies utilizing the system today.

State of Colorado

The Colorado Statewide Digital Trunked Radio System (DTRS) is a P25 standard-based system using 700 and 800 MHz frequencies. Today the DTRS supports 53,000 radios from over 990 user agencies representing all levels of local, county, tribal, state and federal government. This includes the recent integration of the Pikes Peak Regional Communications Network (PPRCN), providing interoperability with the Colorado Springs metropolitan and El Paso County areas, serving an additional 5,400 public safety responders.

State of Minnesota

Minnesota has invested in the Allied Radio Matrix for Emergency Response (ARMER) system; an 800 MHz P25 standards-based communications system for public safety agencies in the state. The system was recognized by FEMA in 2007 report (U.S. Fire Administration/Technical Report Series - I-35W Bridge Collapse and Response, Minneapolis, Minnesota, USFA-TR-166/August 2007) were it identified the system as a best practice in the public safety response to the incident, stating "the new 800 MHz radio system streamlined communications and enabled successful connections among a variety of organizations and agencies."
(http://www.usfa.dhs.gov/downloads/pdf/publications/tr_166.pdf)

San Diego County, California

The San Diego County Regional Communications System (RCS) provides seamless wireless voice and data communications for public safety and public service agencies in San Diego and Imperial Counties. The San Diego RCS incorporates the P25 standard and supports 217 government agencies and 15 dispatch centers, with over 20,000 radios operating on the system today.

CONCLUSION

Mr. Chairman, Motorola welcomes the opportunity to compete in a standards-based environment to help public safety realize its vision to have a truly interoperable nationwide broadband network. We look forward to working with the Subcommittee to further realize our shared vision of a competitive market providing innovative solutions for public safety communications.

Thank you.

[1] The FBI does not publish arson data unless it receives data from either the agency or the state for all 12 months of the calendar year.

[2] The FBI determined that the agency's data were underreported. Consequently, those data are not included in this table.

[3] The FBI determined that the agency's data were overreported. Consequently, those data are not included in this table.

[4] The population for the city of Mobile, Alabama, includes 55,995 inhabitants from the jurisdiction of the Mobile County Sheriff's Department.

[5] Because of changes in the state/local agency's reporting practices, figures are not comparable to previous years' data.

[6] The FBI determined that the agency did not follow national Uniform Crime Reporting Program guidelines for reporting an offense. Consequently, this figure is not included in this table.

[7] The data collection methodology for the offense of forcible rape used by Chicago, Illinois, and the Minnesota state UCR Program (with the exception of Minneapolis and St. Paul, Minnesota) does not comply with national UCR Program guide
its figures for forcible rape and violent crime (of which forcible rape is a part) are not published in this table.

elines. Consequently,

Law Enforcement Officers Feloniously Killed

This page provides information about duly sworn law enforcement officers (who met certain other criteria such as having full arrest powers, ordinarily carrying a badge and gun, etc.) who were killed in the line of duty during 2009. These officers came from city, university and college, county, state, tribal, and federal agencies.

Overview

- In 2009, 48 law enforcement officers were feloniously killed in the line of duty.
- Thirty-two of the slain officers were employed by city police departments. Of these, nearly half (15) were with law enforcement agencies in cities with 250,000 or more inhabitants.
- Line-of-duty deaths occurred in 18 states and Puerto Rico. Twenty-one officers lost their lives in the South. Thirteen of the officers died in the West, 7 died in the Northeast, and 5 officers who were feloniously slain were employed in the Midwest.
- More information about these topics (including annual totals from 2000 to 2009) is provided in Tables 1, 2, 15, 16, 21, 22, 28, 29, and 30.

Victim profile

- The average age of the officers who were feloniously killed in 2009 was 38 years.
- The slain officers' average length of law enforcement service was 12 years.
- Of the 48 officers slain in 2009, 47 were male and 1 was female.
- Forty-two of the victim officers were white, 3 were black, 2 were American Indian/Alaskan Native, and 1 officer was Asian/Pacific Islander.

More information about this topic is provided in Tables 6, 7, 8, 9, 10, and 11.

Circumstances

- 15 officers died in ambush situations.
- 8 officers died from felonious attacks during arrest situations.
- 8 officers died during traffic pursuits/stops.
- 6 officers died answering disturbance calls.
- 5 officers died during tactical situations (barricaded offender, hostage taking, etc.).
- 4 officers died while investigating suspicious persons/circumstances.
- 2 officers were killed while transporting or maintaining custody of prisoners.

More information about this topic (including a breakdown of the types of circumstances in which officers were feloniously killed) is provided in Tables 19, 20, 21, 22, 23, 24, 25, 26, 31, 32, and 33.

Assignments

- 35 officers who were slain in 2009 were assigned to vehicle patrol.
- 2 of the slain officers were off duty but were acting in an official capacity.
- 11 officers were assigned to other duties, such as special assignments or undercover, when they were murdered.

More information about this topic is provided in Tables 15, 16, 17, 18, 23, 24, 25, and 26.

Weapons

- Most officers slain in 2009 (45 of the 48) were killed with firearms. Of those killed with firearms, 28 were killed with handguns. (A breakdown of the types of weapons used in these slayings is provided in Table 27.)
- 2 officers were killed with their own weapons.

- 9 officers attempted to use their weapons; 12 officers fired their weapons.
- 19 officers were slain with firearms when they were 0-5 feet from the offenders.

More information about this topic is provided in Tables 12, 13, 14, 27, 28, 29, 30, 31, 32, 33, 34, 35, and 36.

Body armor

- Most of the officers feloniously killed in 2009 (36 of the 48 officers) were wearing body armor at the time of their murders.
- Of the 33 officers who were wearing body armor and killed with firearms:

  12 suffered wounds to the front of the head.

  7 were wounded in the front upper torso.

  6 were shot in the neck/throat.

  5 were shot in the side of the head.

  2 were shot in the rear of the head.

  1 officer was shot in the back.

More information about this topic (including annual totals from 2000 to 2009) is provided in Tables 37, 38, 39, 40, and 41.

Months, days, and times of incidents

- More officers (8) died from felonious assaults that occurred in April than in any other month.
- 13 officers were involved in fatal assaults that occurred on Saturday, more than on any other day of the week.
- More officers (13) were fatally injured in assaults that happened from 8:01 p.m. to midnight than at any other time period.

More information about these topics (including annual totals from 2000 to 2009) is provided in Tables 3, 4, 5, 17, and 18.

Profile of alleged known assailants

In 2009, 41 alleged offenders were identified in connection with the 48 law enforcement officers feloniously killed. Of those offenders, the following characteristics are known:

- The average age of the alleged offenders was 32 years old.
- The average height was 5 feet 10 inches tall, and the average weight was 181 pounds.
- 39 of the alleged offenders were male; 2 were female.
- 24 of the alleged offenders were white and 17 were black.
- 33 of the 41 offenders had prior criminal arrests.
- 13 of the alleged offenders were under judicial supervision at the time of the incidents.
- 2 of the alleged offenders were intoxicated or under the influence of alcohol at the time of the fatal incidents.

More information about these topics is provided in Tables 42, 43, 44, 45, 46, and 47.

Summaries of Officers Feloniously Killed

Note: Occasionally, the Law Enforcement Officers Killed and Assaulted Program is unable to publish summaries concerning some officers who are feloniously killed in the line of duty. These situations may stem from insufficient information, gag orders that are issued by the courts, or other unusual circumstances that may exist. Although written summaries of the deaths of three officers who were killed in 2009 are not included in this publication, all available information is included where applicable in the data tables.

Alabama

At 5:45 p.m. on April 24, a chief investigator with the Headland Police Department was killed and a deputy sheriff with the Henry County Sheriff's Office was injured during a disturbance call that turned into an ambush. Earlier in the day, a woman had pulled her vehicle into a store's parking lot to get a signal to make a telephone call on her mobile phone. While she was sitting in her car, a man approached the automobile from the rear and fired a shot into the air from a shotgun he was carrying. The man told the woman to "keep her family close," that "bad things" were going to happen, and that she needed to leave his property. The woman called her husband, and when he got off work around 4 p.m., the pair returned to the store's parking lot and called police. A 38-year-old deputy sheriff, who had 14 years of law enforcement experience, and a reserve deputy were dispatched to the scene shortly before 5 p.m. When the deputy sheriff and reserve deputy arrived at the scene, the officers parked their police car near the home and exited the vehicle. The deputy sheriff went to the front of the home, and the reserve deputy went toward the rear of the vehicle. As the deputy sheriff approached the front door of the residence, the reserve deputy saw a man with a weapon come around the corner of the house. The reserve deputy yelled "gun," and the deputy sheriff tried to turn toward the vehicle for cover. The armed man fired three rounds from a 12-gauge semiautomatic shotgun at the deputy sheriff, striking him in the head, neck, chest, back, and hands. The reserve deputy radioed that an officer was down and that he needed assistance. A 38-year-old chief investigator with the Headland Police Department and his partner responded to the call and stopped in the parking lot of a nearby store. The chief investigator, who had more than 16 years of law enforcement experience, exited the vehicle, retrieved his service weapon, and attempted to verbally engage the suspect. However, before the chief investigator could issue any commands to the suspect, the man fired an unknown number of rounds from a .280-caliber semiautomatic rifle at the chief investigator, who was wearing body armor. The rounds struck the chief investigator in the front of the head. He was pronounced dead at the scene. His partner and responding officers from the Quitman County Sheriff's Office in Georgia and the Abbeville Police Department in Alabama engaged the 53-year-old suspect in a firefight, killing him. The suspect, who had a prior criminal record, may have had a mental disorder and had possibly stopped taking his medications. At the time of the publication, the injured deputy sheriff had not returned to duty.

‡

On September 24, just before 1 p.m., a 39-year-old deputy sheriff with the Lee County Sheriff's Office died from wounds incurred while performing a traffic stop. The deputy, with nearly 3 years of law enforcement experience, and his partner were on patrol when they spotted a vehicle with the driver behaving suspiciously. The deputies ran a check on the license plate and found that the license plate and vehicle information did not match. The deputy and a trainee partner, who was driving, pulled over the vehicle. The driver of the vehicle, the sole occupant, turned into the driveway of a residence, and the officers followed. Suddenly, the driver made a u-turn in the yard and attempted to pass the patrol car on the passenger side in order to flee. The deputy was stepping from the passenger side of the cruiser, and the suspect accelerated his vehicle, striking the victim deputy and pinning him under the vehicle. The victim deputy's partner drew her sidearm and fired two rounds, after which the man surrendered. The 37-year-old assailant, who had a prior criminal record and was on parole at the time of the incident, was taken into custody by the victim's partner and later charged with Capital Murder. The victim deputy was taken to a local hospital where he subsequently died.

‡

A 26-year-old police officer with the Mobile Police Department died from a gunshot wound sustained while investigating a disturbance call around 11:30 p.m. on June 2. The officer, with nearly 2 years of law enforcement experience, was off duty but encountered the disturbance at the apartment complex where he lived and where he also served as courtesy officer. In his official capacity, the officer investigated the dispute and initially dispersed the parties involved in the altercation. Shortly after the incident, one of the parties involved returned to the location of the dispute armed with a .380-caliber semiautomatic handgun. Witnesses reported that the individual seemed extremely agitated. The officer approached a vehicle in which one of the original parties involved in the dispute was sitting to ask them to leave the premises. As the officer approached the passenger side of the vehicle, the armed man, who was concealed on the other side of the vehicle, stood up and shot through the open windows of the vehicle, striking the officer in the upper torso/chest area. The 18-year-old alleged assailant then fled the scene in the vehicle. He was pursued by responding officers and was apprehended about 1 hour after the incident. The victim officer was rushed to a nearby hospital by emergency personnel where he succumbed to his injuries a few minutes after midnight on June 3. The alleged assailant was charged with Capital Murder, Altering the Identity of a Firearm, Third-Degree Receiving Stolen Property, and Second-Degree Possession of Marijuana.

‡

A 33-year-old police officer with the Pelham Police Department was fatally wounded during a traffic stop at 11:50 p.m. on December 3. The veteran officer, who had more than 10 years of law enforcement experience, stopped a driver for speeding in a construction zone. Approximately 10 minutes later, dispatch received a call reporting that an officer was lying on the road in that area. Dispatch attempted to contact the officer by his radio, but they were unable to reach him. Several back-up officers arrived on the scene and found the victim officer with a gunshot wound to the front of his head. The back-up officers immediately called for emergency medical personnel, who arrived shortly thereafter and transported the victim officer to a local hospital, where in the early morning hours of December 4, he was pronounced dead from a wound inflicted by a .40-caliber semiautomatic handgun. Investigating officers identified a suspect in the slaying of the victim officer from information that was obtained from the officer's ticket book found at the scene of the shooting. The partially completed speeding ticket contained the man's name, birth date, and a description of the suspect's vehicle. A region-wide announcement was broadcast to be on the lookout for the suspect and his vehicle. Officers from the Alabama Bureau of Investigation arrived on the scene and reviewed footage from the victim officer's dash-mounted camera that showed the victim officer approaching the driver's side of the suspect's car, speaking to the driver, and returning to the patrol car. The officer approached the suspect's vehicle a second time and engaged in another conversation with the driver. As the officer looked down at his ticket book, the man produced a handgun. The white flash of an apparent gunshot appeared on the video, and the victim officer fell to the ground. Police from nearby Trussville, who had heard the description of the murder suspect and the vehicle he was driving, recognized the description of the car as one belonging to the brother of a Trussville police officer. Meanwhile, in Birmingham, the Birmingham Police Department received a telephone call about a man who was trying to break into vehicles and subsequently was seen getting into a truck driven by an unidentified individual. Birmingham officers issued an alert for the truck, and an officer in Trussville reported seeing a truck matching this description speeding through Trussville approximately 1 hour after the shooting incident in Pelham. Officers from Birmingham subsequently located an abandoned car matching the description of the shooting suspect's vehicle. It appeared to have blood on the driver's side doors and roof. Shortly thereafter, the suspect, in a truck driven by his brother, approached cruisers from the Hoover Police Department parked at an exit by the side of the highway. As police officers apprehended the man, he stated, "I'm the guy you're looking for." After a tip from the suspect's brother, police found the weapon used in the murder of the victim officer in the glove compartment of the truck. The 29-year-old suspect, who had no previous criminal history, was charged with Capital Murder of a Law Enforcement Officer.

Arkansas

The 50-year-old assistant chief of the Plumerville Police Department was shot and killed around 6:20 a.m. on June 19 while attempting a traffic stop of a reported stolen vehicle. The assistant chief, who had 27 years of law enforcement experience, had stopped a truck along a local portion of a national highway. He was approaching the vehicle when the suspect fired a single shot from a .22-caliber revolver, fatally wounding the assistant chief in the upper left chest. The assistant chief returned fire, striking the tailgate of the truck before the suspect fled. The victim officer succumbed to his wounds at the scene shortly thereafter. The 22-year-old alleged assailant, who had a prior criminal record and was on probation at the time of the incident, was arrested approximately 15 miles from the shooting. He was charged with Capital Felony Murder, Felon in Possession, and Theft by Receiving.

California

Four officers from the Oakland Police Department were killed and another of its officers was injured during a traffic stop and related tactical situation on March 21. Shortly after 1 p.m., a 40-year-old sergeant, who had 18 years of law enforcement experience, advised that he was making a traffic stop. A 41-year-old officer, who had 10 years of law enforcement experience, had just cleared a traffic stop one block away and drove to the sergeant's location. The lone occupant of the vehicle that the sergeant had stopped presented false identification. The sergeant and the officer were walking toward the vehicle on the driver's side when the occupant of the vehicle opened fire with a .40-caliber semiautomatic handgun through the open window on the driver's side. Both officers, though wearing protective body armor, were each fatally struck in the neck. The victim officers were transported to a local hospital where they succumbed to their injuries. A SWAT team was assembled to search for the suspect, who had fled from the scene. At 3:02 p.m., the tactical team entered the apartment of the suspect's sister, where they had tracked him. As a 43-year-old sergeant with 13 years of law enforcement experience and a 35-year-old sergeant with 9 years of law enforcement experience entered the apartment, they were shot by the suspect with a 7.62x39 mm semiautomatic rifle. Both victim sergeants were wearing body armor, and both were shot fatally in the fronts of their heads. The suspect retreated to a rear bedroom. As a 33-year-old sergeant, who had 11 years of law enforcement experience, entered that room, he was shot in the front upper torso/chest above his protective vest. He was transported to a local hospital where he was treated and released. The other sergeants were transported to the hospital where they were pronounced dead. The 26-year-old suspect, who had an extensive criminal history and had a parolee-at-large warrant against him, was shot and killed during the incident.

‡

At 9 p.m. on July 23, a 30-year-old agent with the U.S. Border Patrol, Campo Station, was shot and killed while investigating suspicious persons or circumstances in Campo. The agent, who had 11 years of law enforcement experience, was patrolling alone and had radioed that he had spotted multiple individuals traveling north in Mexico toward the United States border. Other agents working in the vicinity lost radio contact with the agent and subsequently heard gunshots. Responding agents went to the last known location of the agent and found his vehicle, its lights on and the motor still running.

They found the victim agent a short distance away in the brush. He had been shot multiple times in the head and torso from both the front and rear. The victim agent's service handgun, radio, handcuffs, and personal mobile phone were all missing. On August 14, a 16-year-old male was arrested for the murder and charged with Murder of a Federal Officer Committed in Perpetration of a Robbery and Aiding and Abetting. That individual subsequently pled guilty and was sentenced to 40 years in federal prison.

Colorado

A sergeant with the Montrose Police Department was killed and two officers were wounded at 9:40 p.m., July 25, when they were responding to a domestic incident. The 41-year-old sergeant, who had 19 years of law enforcement experience, was called to a home at 8:30 p.m. to assist two officers who were dealing with a person under the influence of alcohol. The person had barricaded himself in a detached garage. The sergeant, along with the intoxicated man's family members, negotiated with the man for more than an hour. When negotiations failed, the sergeant decided to forcibly enter the garage in order to arrest the man. Family members assured the officers that though there were weapons in the garage, the man inside did not have a key to the locked container, which they called a "gun safe." Upon the police breaking through the door, however, the man began shooting at them with a 12-gauge semiautomatic shotgun. The assailant fired four times. All three law enforcement members were wearing body armor; however, the victim sergeant was fatally struck in the upper torso when a bullet entered the armhole of his protective vest. The other two officers were wounded. One, who was 53 years old and had 18 years of law enforcement experience, was shot in the left leg. The other, who was 24 years old and had 2 years of law enforcement experience, was struck in both legs. Although these two officers returned fire, the 52-year-old offender was not hit and retreated to a bathroom in the garage where he committed suicide. What had been described as a "gun safe" was a gun locker made of sheet metal. The shooter had used hand tools in the garage to peel the metal away and had gained access to the weapons inside. The shooter, who had prior mental disorders, knew the sergeant through a law enforcement relationship. He had a prior criminal record that included a violent crime conviction and was on probation at the time of the incident.

Delaware

Two officers with the Georgetown Police Department were shot around 6:40 p.m. on September 1 while investigating a complaint of shots being fired at a local fast-food restaurant. A 29-year-old patrol officer, who had nearly 6 years of law enforcement experience, was fatally shot in the incident, and a 31-year-old corporal, who had nearly 7 years of law enforcement experience, sustained minor injuries. The officers were on patrol together when they heard a broadcast providing a description of a vehicle occupied by the suspects involved in the reported shooting incident, which allegedly also involved a robbery. According to later reports, one or more of the suspects had robbed a drug dealer and then had fired rounds at the dealer before fleeing the scene with an undisclosed amount of marijuana. The patrol officer and the corporal, both of whom were wearing body armor, spotted the suspects' vehicle in front of them. The corporal, who was driving the patrol car, began to pursue the vehicle, which was occupied by three men. The pursuit ended when the suspects' vehicle came to an abrupt stop, and the corporal stopped alongside it. A passenger in the rear driver's side of the suspects' vehicle shot through his partially opened window with a 9 mm semiautomatic handgun. The round entered the officers' passenger side window and struck the patrol officer in the face, killing him. The corporal, unaware that his partner was struck, received a minor injury to his neck from shrapnel from the round. In spite of his injury, he exited the vehicle and began a foot pursuit of the driver, who had gotten out of the suspects' vehicle and was fleeing the scene. The driver managed to escape, however, and when the corporal returned to the police vehicle, it was only then that he realized that his partner had been shot, and he called for assistance. One of the suspects had remained in the car at the original location and was apprehended; one of the other suspects, the alleged shooter who had killed the officer, had also fled the scene. He was tracked to an area east of the scene, and several assisting officers converged there. The alleged assailant was found inside a residence, and when the officers entered the dwelling, they took the 22-year-old man into custody and charged him with First-Degree Murder of a Law Enforcement Officer, three counts of Possession of a Firearm during the Commission of a Felony, Burglary, Reckless Endangering, and Resisting Arrest. The man, who had in his possession the gun used in the shooting of the patrol officer, had a prior criminal record including violent crime, drugs, and weapons violations. The driver of the vehicle turned himself in approximately 3 days later.

Florida

Two deputy sheriffs, both aged 44, with the Okaloosa County Sheriff's Office were shot and killed while attempting to make an arrest in Crestview around 12:50 p.m. on April 25. About 10:20 a.m., other deputies from the same office responded to a local hospital regarding a report of domestic violence. The victim told the deputies that her husband had beaten her, and she gave the officers a description of his truck and also indicated that she believed he would be at their apartment or at a local shooting range. Around noon, the victim deputies, both of whom were wearing body armor, located the suspect's truck at the shooting range and saw the man standing behind the truck. The deputies, who were driving separate patrol cars, parked several feet behind the truck with the patrol cars facing opposite directions. Witnesses said the deputies approached the man and ordered him to get on the ground, but the man refused. As the deputies continued to give the man commands to get on the ground, one of the deputies pulled out a conducted energy device (CED). When the man continued to defy their orders, the deputy used the CED. The man fell to the ground, then immediately pulled out a 9 mm semiautomatic handgun and began shooting at the deputies. One of the deputies took cover at the front of one of the cruisers, and the assailant positioned himself at the back of the same cruiser. In an exchange of gunfire, the deputy at the front of the cruiser was hit in the shoulder. Despite the injury, the deputy (whose total years of law enforcement experience is unknown) was able to notify dispatchers that he was shot, and he continued to exchange gunfire. The shooter stepped away from the vehicle, approached the injured deputy, and shot him in the front of the head. The second deputy, who had more than 22 years of law enforcement experience, had taken cover but was out of view of any witnesses. At one point, someone at the shooting range saw the second deputy move to the back of the truck, and he attempted to take cover by jumping into the open passenger side door of the assailant's vehicle. Witnesses then heard gunshots and saw the window from the open door shatter. The assailant walked around his truck and shut the passenger side door. He then walked around to the driver's side, got in, and sped off on a local highway. A short time later, additional deputies arrived at the scene and found the two victim deputies lying on the ground. They were transported to a local hospital where they both died later that day. The first deputy succumbed to the gunshot wound to the front of his head, and the second deputy succumbed to the gunshot wound to the rear of his head. Dispatchers broadcast a description of the man's truck to local law enforcement. A sergeant from the Walton County Sheriff's Office, traveling on the same highway, spotted the truck and attempted to make a traffic stop, but the man refused to stop. The sergeant pursued the vehicle as additional officers deployed spike strips in an attempt to disable the truck in a couple of locations along the highway. However, the suspect avoided the strips and continued to flee at speeds of up to 80 mph. A police officer from the Defuniak Springs Police Department placed a set of spike strips across the road along the highway at the city limits. The suspect saw the spike strips and turned across all lanes of the highway to avoid them. He drove off of the right shoulder of the highway and headed toward the sergeant. The sergeant pulled out his gun and fired at the driver's window as the suspect sped past him going about 70 mph. At this point, five patrol units from Walton County and one unit from Okaloosa County were in pursuit. As the suspect's vehicle crossed the entrance road to a local airport, it went airborne and left the roadway. The suspect attempted to gain control of the truck and return to the road when the sergeant from Walton County performed a tactical maneuver in an attempt to end the pursuit. The maneuver forced the suspect's truck off of the right shoulder of the roadway where the truck struck a sign and some shrubs. The vehicle then flipped several times and struck the roof and windshield of a vehicle driven by a Walton County sheriff's deputy before coming to rest up against that deputy's vehicle. The remaining deputies involved in the pursuit positioned their vehicles around the suspect's truck. The suspect, still in the vehicle, shot at the deputies, who returned fire and killed the assailant to end the threat. The 28-year-old man had a prior criminal record that included violent crime.

‡

A 38-year-old corporal with the Tampa Police Department was shot and killed while investigating a suspicious person around 10 p.m. on August 19. When the veteran corporal, who had nearly 11 years of law enforcement experience, confronted a man pushing a shopping cart full of items in an outside commercial area, a fight ensued. The man tried to run away, and the corporal tackled him. The man then produced a .45-caliber semiautomatic handgun, hit the corporal in the head with it, and shot the corporal in the front upper torso/chest area. The round entered the corporal's ballistic vest through the armhole area, fatally wounding him. The man ran back to the shopping cart and grabbed a canvas bag as a second officer arrived. He reportedly pulled a semiautomatic rifle from the bag, aimed it at the responding officer, and then fled the scene. A police dog later tracked the suspect to the backyard of a nearby residence. The 34-year-old male was arrested and charged with First-Degree Murder of a Law Enforcement Officer, Aggravated Assault of a Law Enforcement Officer, Carrying a

Concealed Firearm, and Depriving a Law Enforcement Officer of Communications. In addition to the military-type gear and numerous ammunition magazines found in the shopping cart, police confiscated three handguns and a rifle from the offender.

Illinois

A 59-year-old lieutenant with the Centreville Police Department was shot and killed while investigating suspicious persons shortly before 2:30 a.m. on June 2. The veteran lieutenant, who had nearly 23 years of law enforcement experience, was patrolling an area near a housing complex when he noticed three or four people loitering at the complex. He stopped his vehicle and told them to leave the area. The lieutenant circled the complex and came back to where he first saw the group, and they were still there. He stopped his vehicle and exited but did not notify the dispatcher that he had left the vehicle or that he was investigating suspicious persons. The lieutenant ordered the individuals to place their hands on the patrol vehicle. As he was patting down one of the individuals, a man pulled out a .32-caliber revolver from his waistband and fired three shots, striking the victim lieutenant in the chest, back of the head, and fatally in the neck. A witness contacted dispatch via the radio in the victim lieutenant’s patrol car and informed them that the lieutenant had been shot. Tips from the public assisted the authorities in locating and arresting the suspect on June 4. The 22-year-old man, who had a prior criminal record that included violent crime, police assault, and weapons violations, was charged with First-Degree Murder.

‡

A 27-year-old police officer with the Chicago Police Department was shot and killed in an ambush around 12:30 a.m. on June 1. The officer, who had nearly 4 years of law enforcement experience, and his partner responded to a dispatch call of shots fired and a report that gang members were hiding guns in the garage of a nearby residence. As the officers approached the location, they saw someone walking near the residence. While the officers were questioning this person, a vehicle drove by, and a passenger fired multiple shots at them through an open window of the vehicle with a .357 Magnum revolver. The victim officer, who was wearing body armor, was shot in the thigh and the back of the head. He was taken to a local hospital where he died later that morning from the head wound. Later that day, authorities arrested a 21-year-old suspect and charged him with Murder of a Law Enforcement Officer. The suspect stated that he believed he was shooting at rival gang members. The following day, another suspect, a 20-year-old male, was arrested and charged with Murder and Attempted Murder. Both men were on probation at the time of the incident, were known drug dealers, and had prior criminal records that included violent crimes, drugs, and weapons violations.

Kansas

A 26-year-old deputy sheriff with the Sedgwick County Sheriff's Office was shot at 12 p.m. on September 28 in an ambush in Wichita. The deputy, who had more than 1 year of law enforcement experience, had been dispatched a few minutes earlier to investigate a report of larceny. At 12:01 p.m., he radioed dispatch to report that he had been shot. Apparently, the deputy arrived at the residence but was unable to get anyone to answer the front door. He asked the dispatcher to contact the complainant on the telephone, which the dispatcher did. The complainant instructed the deputy via the dispatcher to meet him behind the residence. The deputy went to the rear of the residence, and the man, who was hiding behind a tree, immediately opened fire with a .30-30 lever-action rifle, wounding the deputy in his chest, the front below his waist, and fatally in his back, where at least one of the bullets penetrated his body armor. The force of the shot knocked the victim deputy to the ground. The man approached the deputy and attempted to shoot him at close range, but the rifle malfunctioned and did not fire. After a struggle, the man took the deputy's service weapon, a 9 mm semiautomatic handgun, and pointed it at the deputy. The deputy, still lying on the ground, lifted his leg in an effort to protect himself from the bullet when the man fired the weapon, and the bullet went through the deputy's foot and lodged in his bulletproof vest. The man fled the scene, and it was then that the victim deputy radioed dispatch that he had been shot twice. Assisting deputies arrived, secured the scene, and administered emergency medical treatment to the victim deputy until an ambulance arrived. The victim deputy was transported to a local medical center where he underwent surgery, but he succumbed to his wounds later that day. In the meantime, officers from the Sedgwick County Sheriff's Office, the Wichita Police Department, the Derby Police Department, the Kansas Highway Patrol (KHP), the Kansas Bureau of Investigation, the Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), and the FBI responded to the scene of the shooting. They surrounded the house where they believed the shooter was located and attempted negotiations with him, but those attempts were unsuccessful. Eventually they introduced gas into the house and then used a robot with a camera in an effort to find the man. However, the suspect had escaped into a rural area surrounding the house.

As two ATF agents and one KHP trooper drove through the field where they believed the suspect was hiding, he fired at them with the service weapon he had taken from the fallen deputy. A brief gun battle ensued, and the suspect was fatally wounded and died at the scene. Investigating officers discovered that the man had remarked earlier that he was going to “kill a cop,” and that he subsequently had called in the false report of larceny. They found a large supply of ammunition for the .30-30 rifle and outdoor clothing in a duffle bag at the scene in addition to the victim deputy’s service weapon. The offender was a 27-year-old man with a prior criminal record that included police assault and violent crime.

Minnesota

On September 7, at 8:45 a.m., a 57-year-old officer with the North St. Paul Police Department was shot and killed and a 37-year-old officer with the Maplewood Police Department was wounded while attempting an arrest. The North St. Paul officer, who had nearly 16 years of law enforcement experience, and the Maplewood officer, who had more than 10 years of law enforcement experience, responded to a call regarding a possible violation of a protection order. The woman who had called for assistance and her daughter were waiting in the parking lot outside of their apartment building when the officers arrived. The woman said that she thought her former husband, for whom she had an active protection order, might be in her apartment. He had violated the protection order previously and was on conditional release. At the woman’s request, the officers first checked the vacant apartment adjacent to the woman’s residence but found no sign of the man there. The woman then unlocked the door to her apartment, and the North St. Paul officer entered first and was immediately assaulted by the woman’s ex-husband. The officer pushed the woman and her daughter away from the attack, and he then was struck in the face with a burning rag that the man was wielding. In the altercation that ensued between the two officers and the man, the man managed to remove the North St. Paul officer’s service weapon, a .40-caliber semiautomatic handgun, from its holster and shoot the officer once in the side of his head. The victim officer, who was wearing body armor, died instantly. The man immediately turned the gun on the second officer, who was also wearing body armor. In the ensuing gunfight, she fired eight shots at the assailant, and he fired several rounds at her. During this time, the officer’s weapon malfunctioned once, but not before five of her rounds struck the assailant. She discarded that magazine and attempted to load another one, not knowing that it had been damaged by one of the rounds fired by the assailant. The rounds from that magazine spilled onto the floor, and as she was loading her last magazine, a back-up officer arrived, and she and the officer seized the firearm from the shooter and handcuffed him. The 34-year-old assailant, who had had a prior criminal record and convictions that included violent crime, drugs, and weapons violations, died at the scene a short time later. Medical personnel that arrived on the scene pronounced both the victim officer and the assailant deceased. They transported the wounded officer to a local hospital where the injuries to her arms/hands and front lower torso were treated. She was released later that day and returned to work approximately 2 weeks later.

New Jersey

On July 19, a 37-year-old detective with the Jersey City Police Department (JCPD) succumbed to gunshot wounds he received 3 days earlier while attempting to arrest a man suspected of shooting another police detective. In that incident, which occurred on July 16 around 5 a.m., a JCPD surveillance team was monitoring a vehicle that was allegedly used in an armed robbery in which an individual was shot with a 12-gauge shotgun. When the officers saw a female suspect move the vehicle to the opposite side of the street, they began to move toward the vehicle in their unmarked car. The woman exited the vehicle and was joined by a male suspect who apparently had been lurking nearby; the pair crossed the roadway. As the unmarked police car came into view, the man pulled a 12-gauge shotgun from under his robe-like garment and began firing at the unmarked car, striking the detective who was operating it. The pair then fled into an apartment complex. An entry team comprised of the JCPD and the Port Authority of New York and the New Jersey Police Department responded and attempted to elicit the suspects' surrender. Among the team members was the JCPD veteran detective, who had more than 10 years of law enforcement experience. When the attempts failed to yield a response from the suspects, the entry team began a floor-by-floor, unit-by-unit search of the complex. After clearing 14 units, the team knocked on the door of the fifteenth unit; although the knocks were unanswered, officers heard activity inside the apartment. As the officers prepared to break through the door, the male suspect began firing the same 12-gauge shotgun, striking four officers. The officers returned fire, fatally shooting both the male and female suspects. The victim detective, who was wearing body armor, suffered a shotgun blast to the head and neck. He was transported to a medical facility where he died from the wound to his head. The 32-year-old male assailant had a previous criminal record with both juvenile and adult convictions and that involved violent crime, drugs, police assault, and weapons violations.

New Mexico

A sergeant with the Sandoval County Sheriff's Office was shot and killed on July 16 while investigating a burglary in progress in La Cueva. The 45-year-old sergeant, with nearly 27 years of law enforcement experience, and a deputy were on duty working an undercover burglary operation. Around 4:30 a.m., a lone male entered the cabin where the officers were, and a struggle ensued. After the officers handcuffed the 62-year-old burglary suspect, he brandished a .357-caliber revolver and fired five rounds at the officers. The victim sergeant was shot in the arms/hands and fatally below the waist, severing his right femoral artery. Despite being shot, the sergeant was able to return fire, killing the assailant instantly. The man was under the influence of alcohol at the time of the incident and was wanted in Canada for a double homicide. The sergeant was airlifted to a hospital where he was pronounced dead upon arrival at 6:48 a.m. The deputy was not injured in the incident.

North Carolina

At 1:25 a.m. on April 8, a 29-year-old detective with the Lenoir County Sheriff's Office (LCSO), who had more than 7 years of law enforcement experience, was killed during a tactical situation in a wooded area in Grifton. A 27-year-old detective with the same agency was also wounded in the incident. At 10 p.m. on April 7, deputies responded to a report of a man who had parked his car near a wooded area, exited the vehicle, and fired a gun. Although the deputies found the vehicle, they could not locate the man. Moments later, the man fired a shot from the nearby patch of woods and continued to fire shots about once every 10 minutes; however, none of the rounds struck the officers or their vehicles. Additional officers arrived and set up a perimeter on both sides of the wooded area. Using a public address system, officers attempted to contact the man, and he responded by firing his weapon again. Meanwhile, officers processed the vehicle's license information and determined that the owner was a woman in a nearby county. Sheriff's deputies from that county went to the woman's residence in an effort to determine the identity of the shooter, but they found the woman dead, apparently murdered in her home. Police determined that the woman's boyfriend was the individual in the woods firing at the officers. Officers summoned a special response team from the LCSO and a helicopter from the North Carolina State Highway Patrol. Officers in the helicopter scanned the area using infrared technology, and after about 25 minutes, they located the man. Seven members of the special response team, wearing ballistic vests and using a thermal unit and a ballistic shield, entered the woods. The helicopter pilot radioed the team informing them when they were within 5 yards of the man. Armed with a 7 mm bolt-action rifle, the man fired a round at the officers, who were in a “stack formation.” The round went through the sleeve of the first officer’s uniform and struck the detective fatally in the left shoulder. The victim detective was wearing a protective vest, but the round exceeded the vest’s specifications. In the exchange of gunfire that followed, fragments from a shot struck the second detective in the left side of the neck, injuring him. Officers returned fire, hitting the suspect five times; he later died of his injuries. The injured detective recovered from his wounds and returned to duty several weeks later. The 43-year-old suspect had a record involving weapons violations, violent crime, and police assault. Police later found a note in the suspect’s home that indicated he was going to kill as many officers as he could. Investigators also determined that he had murdered his girlfriend.

‡

A corporal from the Martin County Sheriff’s Office was shot and killed on December 8 at 9:15 a.m. while responding to a disturbance call in Williamston. The 38-year-old veteran corporal, who had nearly 16 years of law enforcement service, responded to a report that a man was walking around and firing a gun in a residential area in the city. When the corporal arrived at the alleged shooter’s residence, he saw a man was inside the home. The corporal had a brief conversation with the man from the front porch and then immediately requested that all available officers report to the scene. The man appeared to walk to the rear interior of the home, and the corporal walked to the side of the house, approaching the backyard. In the backyard, the corporal encountered the man holding a 7.62x39 mm semiautomatic rifle. The corporal ordered the man to drop his weapon; instead, the man fired an unknown number of shots, striking the corporal in the front upper torso/chest. The victim corporal was wearing body armor, but one bullet entered his chest through his left armpit, circumventing the vest. The alleged assailant, a 36-year-old man with a prior criminal record including police assault, was shot and killed by assisting officers who had arrived on the scene.

‡

At 10:29 a.m. on October 7, two officers with the Winston-Salem Police Department were shot while responding to a warrant service request. A 50-year-old sergeant was shot and killed, and a 27-year-old officer was injured while attempting to make an arrest stemming from the warrant. The officer, who had more than 6 years of law enforcement experience, and his partner responded to the original call made from a local fast-food restaurant. While the officers were en route to the location, the call was upgraded to a hold-up alarm. The two officers arrived on the scene and made contact with the individual who had made the call. Apparently, a man had gone into the business to confront his ex-wife and had created a disturbance. It was then that personnel were prompted to activate the hold-up alarm. The officers identified the suspect and confirmed that he had outstanding warrants for his arrest regarding offenses against his ex-wife. The officers were told that the suspect had exited the building and was in an adjacent parking lot. When the officers went to the parking lot to confront the man, he ran, and the officers pursued on foot. The suspect attempted to run back into the restaurant, but the employees had locked the doors. The sergeant, a 27-year veteran of law enforcement, arrived on the scene to assist just as the suspect was rounding a nearby building. The man ran down an embankment into a thicket, and the sergeant followed him. While in the thicket, the man produced a .380-caliber semiautomatic handgun and shot the sergeant, who was wearing body armor, in the front of his head at point blank range. The 27-year-old officer caught up to them in the thicket, and the suspect shot the officer in the chest. The round was stopped by the officer's body armor. The officer was also struck by a bullet in the side of the head, near his ear. The officer returned fire with six shots, striking the man three times. The 35-year-old suspect died at the scene. He had a prior criminal record including violent crime, drugs, police assault, and weapons violations. Both the sergeant and the officer were transported to a local medical center. The officer survived his injury but did not return to duty. The sergeant did not recover from his injury and died 5 days later.

Oklahoma

Two sheriff's deputies with the Seminole County Sheriff's Department were shot and killed in the city of Seminole in an ambush around 4:30 p.m. on July 26. About 4 p.m., a woman called the department because her son, against whom she had a restraining order, had broken into her home, and she was afraid to go into the residence. The two deputies went to the home to investigate. One of the deputies knocked on the front door three times then entered the home. The man in the house opened fire on the officers with 22 shots from a 9 mm automatic rifle. The first deputy, who was 23 years old and had 1 year of law enforcement experience, was struck in the front below the waist and in the front of the head. The second deputy, who was 43 years old and had 3 years of law enforcement experience, was hit by a round in the chest. The first deputy died at the scene from the gunshot wound to his head. The second deputy was taken to a local hospital where he died later that day. The 26-year-old alleged assailant was arrested and charged with two counts of Murder. He was a known drug user and was under the influence of narcotics at the time of the incident. The man also had a prior criminal record that included violent crime, drugs, police assault, and weapons violations.

Pennsylvania

A 32-year-old patrol officer with the Penn Hills Police Department was shot and killed on December 6 around 8:25 p.m. in an ambush. The patrol officer, who was a 5½-year veteran of law enforcement, was sitting in his police cruiser waiting for backup outside the house where a 911 call around 8:20 p.m. indicated that there was a man inside with a gun. While the telephone line remained open, the dispatcher heard what sounded like a struggle, then gunshots. A second officer arrived at the scene and reported that an officer was down. Additional units were called to the scene. Approximately 8:30 p.m., a sergeant arrived and found a woman standing in the street crying and yelling, "He's been shot, the cop's shot." She told the sergeant that the victim officer was in his car. The sergeant told the woman to return to her house and remain there, and he ran to the patrol officer's vehicle, where he found the victim patrol officer slumped in the front seat with a gunshot wound to his head. Because of the initial "officer down" call, medical personnel already had been dispatched. Within minutes of the sergeant's arrival, an ambulance arrived at the scene and rushed the patrol officer to a local hospital, where he was pronounced dead a short time later of the head wound from a round from a 7.62x39 mm semiautomatic rifle. Further investigation showed that the victim patrol officer, who was wearing body armor, was also shot in the chest but had been able to fire two shots from his service weapon before he was fatally wounded. They also found the body of another man in an upstairs bathroom. Apparently, the suspect had shot and killed the man in the bathroom and was attempting to run from the scene when he saw the patrol officer in the cruiser and had shot him. Twelve hours later, officers arrested a 32-year-old suspect when they located him in his mother's residence. The suspect had a criminal record that included murder, weapons violations, and drugs, and was also on parole at the time of the incident. He was charged with two counts of Criminal Homicide, Burglary, Robbery, Illegal Possession of a Firearm, Possession of a Firearm without a License, Possession of a Firearm with an Altered Manufacturing Number, and Possession of a Prohibitive/Offensive Weapon.

‡

Around 8:40 p.m. on June 7, a 34-year-old state trooper with the Pennsylvania State Police, Swiftwater, who had nearly 7 years of law enforcement experience, was fatally shot following a traffic stop in Coolbaugh Township. A 35-year-old state trooper with the same detachment, who had nearly 6 years of law enforcement experience, was injured in the same incident. Approximately 7:45 p.m., officers from the Nazareth Borough Police Department (NBPD) responded to the residence of a reported protection from abuse violation. When the officers arrived at the home, they found that the suspect had left the home with his 9-year-old son. Other officers with the NBPD spotted the man driving his vehicle, and they pursued him for 40 miles to Coolbaugh Township. Assisting officers were able to stop the vehicle. The two troopers from the Swiftwater detachment approached the vehicle, and when they were within 5 feet of the driver's door, the man opened fire with a 9 mm semiautomatic handgun, striking the victim officer in the neck and wounding the other officer in his left shoulder. The troopers returned fire, striking the assailant, while another state trooper and a corporal with the Tatamy Borough Police Department pulled the boy from the vehicle unharmed. The fatally wounded state trooper, who was wearing body armor, was airlifted to a local hospital where he succumbed to his injury later that day. The second state trooper, who was also wearing body armor, was taken to another hospital where he was treated and later released. The 31-year-old assailant, who was on probation at the time of the incident and who had a prior criminal record that included drug use, was pronounced dead at the scene.

‡

A 25-year-old police officer with the Philadelphia Police Department was shot and killed on February 13 while investigating an attempted robbery. At 8:12 p.m., the officer and his partner responded to a call where they were met by a cab driver who identified a man who had attempted to rob him. As the officers approached the suspect, they directed him to remove his hands from his pockets. The man fired multiple shots from a .357-caliber revolver from inside his jacket pocket. The victim officer, who had nearly 6 years of law enforcement experience, was struck three times in the front upper torso/chest above his body armor. Both officers returned fire and wounded the offender. The victim officer was transported to a local medical center where he died shortly after arrival. The 33-year-old suspect, a known drug dealer and user, was on probation at the time of the incident. He was arrested and charged with Murder and Narcotics Possession.

‡

Three officers from the Pittsburgh Bureau of Police were killed and another of its officers was injured in an ambush at a residence shortly after 7 a.m. on April 4. At 7:03 a.m., dispatchers received a call of a domestic dispute at the residence, and two officers arrived at the scene at 7:11 a.m. One officer was 36 years old and had more than 1 year of law enforcement experience; the other officer was 28 years old and had nearly 2 years of law enforcement experience. Each was wearing body armor. The complainant, who had called and asked police to remove her adult son from the house, admitted the officers into the dwelling. She apparently was unaware that her son had come into the room with a .22-caliber rifle. When the officers entered about 10 feet into the house, he opened fire on them with an unknown number of rounds. The woman fled downstairs to the basement as each officer was hit in the front of the head. The 36-year-old officer was hit at point blank range and fell to the floor inside the house. The other officer apparently had moved outside of the house to the front stoop, where he fell. Witnesses said the man opened the screen door and fired two or three more shots at the fallen officer, then went back inside. Both officers died at the scene. At approximately 7:16 a.m., dispatchers received calls about the downed officers, and a 45-year-old officer, who had 26 years of law enforcement experience, responded. As he arrived at the scene, he saw that another officer, aged 41 and with more than 14 years of law enforcement experience, had responded to the call and had been shot below the waist and in the chest. The wounded officer, who was wearing body armor and was off-duty just having completed the night shift, was lying on the ground near his vehicle. As the responding officer took cover near the front of the vehicle to assess the situation, the assailant fired an unknown number of rounds from a 7.62 mm semiautomatic rifle from the residence toward the vehicle, striking the officer in the hand. The officer, despite his injury, pulled the other wounded officer to cover behind the vehicle and fired at the assailant until the SWAT team arrived. The fatally wounded officer was taken to a local hospital where he succumbed to his injuries. When the SWAT team arrived, officers took up positions around the area, and a 3-hour standoff ensued during which time the assailant exchanged gunfire with police intermittently. The man had been stockpiling weapons and had used several weapons in the incident, including a 12-gauge shotgun, a .357-caliber revolver, and a .380-caliber handgun. Several rounds from the assailant's weapons struck the SWAT team's vehicle as well as nearby residences. Police returned fire, and at one point, struck the man in the leg, wounding him. The assailant, who was 22 years old and was wearing body armor, then allowed the police to enter the home. He was taken to a local hospital where he was treated for his injuries. He was arrested and charged with Aggravated Assault and three counts of Criminal Homicide. His mother was safely removed from the home without injuries. The officer with the injured hand recovered from his injury and returned to duty on April 25.

South Dakota

A deputy sheriff with the Turner County Sheriff's Office was shot and killed around 9:15 a.m. on March 15 while responding to a call regarding a possible suicide attempt. The 32-year-old deputy sheriff, who had 5 years of law enforcement experience, arrived at the rural residence and attempted to make contact with a 19-year-old male, whose welfare was in question. The deputy entered a bathroom in the home and located the male holding a .30-06 bolt-action rifle. The man shot at the deputy, and the bullet grazed the deputy's left shoulder, hitting beyond the edge of his body armor. The deputy returned fire and retreated toward his patrol vehicle as the man shot at him two more times. One bullet struck the front door post of the patrol vehicle and the other round went through the windshield and struck the deputy fatally in the neck. The 19-year-old suspect telephoned the Mitchell Police Department from the residence, claimed he had shot the deputy in self defense, and then fled the scene. When emergency personnel arrived, they found the deputy deceased on the ground next to his patrol vehicle. Approximately 3 hours later, the suspect, who had a prior criminal record and who was a known drug user, surrendered to law enforcement officials. He was arrested and charged with First-Degree Murder.

Tennessee

A 56-year-old captain with the Henderson Police Department died December 13 from gunshot wounds sustained shortly before 8 p.m. on December 10 when he responded to a robbery in progress at a local grocery store. Minutes before the incident, one of the employees had called dispatch to report that an armed man was robbing the store. The captain, a veteran with nearly 28 years in law enforcement, and a deputy were the first to arrive at the scene. As two assisting officers were pulling into the store's parking lot, they received a call from dispatch indicating that shots had been fired in the store and that the captain had been hit. The assisting officers entered the store and found the deputy unharmed and the captain lying on the floor. The assailant had shot three rounds from a .44-caliber revolver, wounding the captain in his front lower torso/stomach. The captain had fired 13 rounds, wounding the suspect. The assisting officers found the assailant lying on the floor of the store's office with the revolver lying at his feet. They ordered the man to show his hands. When the man did not comply, the two officers and another deputy who had arrived at the scene approached the man, who was lying face down with his hands under him moving around. The officers turned him over, handcuffed him, and searched him for any additional weapons. The captain was transported to a local medical center where he succumbed to his injuries 3 days later. The 48-year-old assailant, who had a prior history of violent crime, drugs, and weapons violations, recovered from his wounds and was charged with First-Degree Murder, Attempted Murder, and Aggravated Robbery.

Texas

At 3:40 p.m. on April 2, a sergeant with the Bridgeport Police Department was killed while assisting with a traffic pursuit. A peace officer with the Wise County Attorney's Office and a deputy with the Wise County Sheriff's Office were riding in a patrol car near Decatur when they saw a speeding vehicle driven by an individual they believed they had pursued earlier that day. They followed the vehicle into Bridgeport. The 32-year-old sergeant, who had 6 years of law enforcement experience, had been clearing traffic ahead of the pursuit and was waiting in his marked cruiser on the right side of the road for the officers' and the suspect's vehicles. When they arrived, the suspect abruptly turned his vehicle to the right, crossed two lanes of traffic, and struck the parked patrol car, fatally wounding the victim sergeant, who died at the scene. The 43-year-old assailant, who was taken to a local hospital for treatment of injuries sustained in the incident, was known to use drugs and had a prior criminal record. At the hospital, he confessed to the murder to an attending ranger and was subsequently arrested and charged with Capital Murder of a Law Enforcement Officer.

‡

A 31-year-old deputy sheriff with the Chambers County Sheriff's Office was killed on July 13 in an incident at a residence in Baytown. The deputy, who had more than 6 years' law enforcement experience, responded to a mobile home a little after 9:30 a.m. with a fellow deputy and a trooper from the Texas Department of Public Safety. A meter reader assigned to turn off water service to the home had reported being shot at by a resident. When the law enforcement officers arrived, they arrested a female resident of the home who had shot with what she later described as "blanks" at the meter reader. When the deputy sheriff, who was wearing body armor, entered the home to search for other suspects or victims, he encountered a male resident in a hall near a back bedroom. The male resident looked around a corner, saw the deputy, and began firing a .223-caliber semiautomatic rifle, fatally wounding the deputy in the front head. The shooter then went into the back bedroom. The other deputy and the trooper fired at the assailant through the door and wall of the bedroom and were able to get the victim deputy out of the home. Because there was no further response from inside the home, SWAT teams were called. After an extended standoff, heavy construction equipment was used to shake the mobile home and then remove a wall. The 37-year-old shooter was found dead in the back bedroom with a self-inflicted gunshot wound. The SWAT units noticed explosives in the home and called in the bomb squad, which began clearing the residence. They requested assistance from other bomb squads, including four FBI Special Agent Bomb Technicians. The bomb squads collectively found 118 improvised devices, which took 2 days to safely remove. The shooter had prior crime convictions that included violent crime, weapons violations, and a juvenile conviction.

‡

A 47-year-old lieutenant with the Corpus Christi Police Department was fatally struck by a vehicle at 12:10 a.m. on March 11 while deploying stop sticks during a felony traffic pursuit. A few minutes earlier, a patrol officer in a neighboring community had requested an emergency backup after a driver had assaulted him in Molina. The assault had escalated into a traffic pursuit, and the lieutenant had responded to the area to assist the patrol officer. The lieutenant had placed the tire deflation devices on the road in advance of the suspect's arrival in Corpus Christi. The 20-year law enforcement veteran was waiting on the shoulder of the road to pull up the spikes once the suspect had driven over them. As the driver approached the devices, officers chasing the suspect's vehicle saw the driver swerve off the road and strike the victim officer with the vehicle. The victim officer suffered extensive and fatal internal injuries; he was taken to a local medical center where he was pronounced dead at 12:30 a.m. After striking the victim officer, the assailant sped away in his vehicle with the other officers still in pursuit. The pursuit ended when the driver was shot while attempting to assault other officers. The 21-year-old driver, who was on probation at the time of the incident, was also taken to a medical center for the treatment of his wounds. The suspect, who had a prior record for violent crime, was arrested and charged with Homicide and eight counts of Aggravated Assault on a Law Enforcement Officer. The suspect was later found guilty and sentenced to death.

‡

A 43-year-old senior corporal with the Dallas Police Department was shot and killed on January 6 while attempting to serve an arrest warrant. The corporal, who had 18 years of law enforcement experience, was with other members of a gang unit as they attempted to enter an apartment at 6:14 p.m. An individual from inside the residence fired five shots through the door from a .38-caliber revolver. The victim corporal, who was wearing body armor, was struck in the front of his head from an unknown number of rounds, and he fell to the ground. He was transported to a local hospital where he died as a result of his injuries. The 26-year-old male suspect, a known drug dealer with a prior criminal history, was arrested and charged with Capital Murder.

‡

A 29-year-old patrol officer with the Pasadena Police Department died from a gunshot wound to the head at 7:11 a.m. on August 21 after responding to a domestic disturbance call. He was one of two patrol officers dispatched to the scene. The officer, who had nearly 5 years of law enforcement experience, was wearing body armor when he arrived at the residence at 6:25 a.m. He knocked on the door of the dwelling and made contact with the woman who had called the police for help concerning a man who was mentally ill. While the two talked on the porch, the man stepped out of the residence and shot the officer in the front of the head with a .40-caliber semiautomatic handgun. The second responding officer had just arrived, and upon seeing the shooting, he shot the male assailant. The victim officer was transported by medical helicopter to a hospital in Houston where he was pronounced dead. The 24-year-old assailant, who had a previous criminal record with both juvenile and adult convictions, was arrested and charged with Capital Murder of a Law Enforcement Officer and Aggravated Assault of a Law Enforcement Officer.

Washington

One sergeant and three officers from the Lakewood Police Department were killed in an ambush at 8:14 a.m. on November 29. Earlier that morning, the sergeant and the officers went to a local coffee shop where police often gather to share information and complete required reports. At 8:16 a.m., dispatchers received a 911 call via a mobile phone that reported a man had entered the coffee shop and had fired a gun. The witness with the mobile phone reported that a man had walked into the business as if he were going to purchase coffee, but instead, had drawn a 9 mm semiautomatic handgun and had fired on the four officers at close range. The 39-year-old sergeant, who had more than 13 years of law enforcement experience, was shot in the rear of his head and fatally in the side of his head. The 37-year-old officer, who had more than 12 years of law enforcement experience, was shot in the front and side of his head, in his front upper torso/chest, and fatally in his neck/throat area. The 40-year-old officer, who had nearly 15 years of law enforcement experience, was struck in the rear of her head and fatally in the side of her head. The fourth officer, a 42-year-old with more than 8 years of law enforcement experience, was able to shoot the assailant twice in the chest/abdomen even though the officer was shot in the front, rear, and side of his head; in the front below his waist; in his arms/hands; and in the front of his head, which was the fatal wound. After killing the four officers, all of whom were wearing body armor, the assailant took the 42-year-old officer's weapon and left the coffee shop. Witnesses reported that the alleged assailant went to a nearby car wash where he got into the passenger side of a truck that was being washed by another man. That man reportedly drove away in the vehicle with the alleged assailant. Two days later, at 2:30 a.m., a police officer in Seattle discovered a stolen vehicle apparently abandoned in the middle of a street. As the officer approached the vehicle, he heard a noise by his patrol car, turned, and saw a man whom he recognized as the suspect from the Lakewood shootings. The officer ordered the man to show his hands, and when the man refused to comply, the officer shot and killed him. The gun that was taken from the victim officer during the ambush in the coffee shop was found in the man's waistband. The 37-year-old alleged assailant was a known drug dealer with previous charges against him for violent crime, murder, and weapons violations. He was on conditional release at the time of the shootings and was known to have mental disorders.

‡

Two officers with the Pierce County Sheriff's Department were shot at 8:48 p.m. on December 21 when they responded to a domestic incident in Eatonville. The 44-year-old deputy sheriff, who had 10 years of law enforcement experience, was fatally wounded, and the 43-year-old sergeant, who had nearly 21 years of law enforcement experience, was seriously wounded but survived the attack. The officers were called to a residence to investigate an argument between two brothers. The officers were invited into the home by the caller, who was one of the brothers. The other brother apparently had armed himself and began firing shots at both officers with a .45-caliber semiautomatic handgun. The deputy sheriff was wounded in the neck/throat and fatally in the front upper torso/chest when the bullet entered between the side panels of his protective body armor. Even though he was severely wounded, the deputy sheriff returned fire, killing the assailant. The veteran sergeant, who was wearing body armor, was wounded on the side of his head. The victim deputy sheriff was airlifted to a hospital where he died on December 28. The victim sergeant was taken to a hospital where he was treated and released days later for an extended recovery. The 35-year-old assailant, who had a prior mental disorder, had a criminal history including police assault and was on conditional release at the time of the incident.

‡

On October 31, just after 11 p.m., two officers from the Seattle Police Department were ambushed while sitting in their patrol car. The attack left a 39-year-old officer dead and a 34-year-old officer injured. The 39-year-old officer, who had nearly 9 years of law enforcement experience, and a trainee officer, who had 7 months of law enforcement experience, were parked on a public street discussing training points following a routine traffic stop. The veteran officer was seated in the passenger side when a car pulled up on the driver's side of their police vehicle, blocking the trainee officer's door. The trainee officer noticed that the driver had something in his hand, and she yelled a warning and ducked. The driver of the car shot several rounds from a .223-caliber semiautomatic rifle into the police vehicle. The trainee officer received an injury to her upper back when a bullet entered the left sleeve of her shirt, traveled along her back tearing her protective vest, and exited through her right sleeve. The veteran officer, who was wearing body armor, was shot in the neck and arm, and received a fatal wound to the side of his head. The shooter backed up his vehicle and made a three-point turn and fled the scene. The injured trainee officer was able to exit the patrol car and fire several rounds into the assailant's vehicle before he sped away. She used the radio to call for help, reporting that shots had been fired and that her partner had been killed. When assistance arrived, the injured officer was transported to the hospital where she was treated and released. The 41-year-old male suspect, who had no prior record, was arrested 6 days later and charged with Murder, two counts of Attempted Murder, and Arson.

Law Enforcement Officers Accidentally Killed

This page provides information regarding accidental line-of-duty deaths of duly sworn city, university and college, county, state, tribal, and federal law enforcement officers who met the same criteria as officers feloniously killed.

Overview

- In 2009, 47 law enforcement officers died as the result of accidents that occurred in the line of duty.
- Law enforcement agencies in 29 states reported that officers from their jurisdictions died in the line of duty as a result of accidents in 2009.
- Of the 47 officers accidentally killed, 15 were employed by city police departments, 21 were employed by county agencies, 10 were employed by state agencies, and 1 was employed by a federal agency.

More information about these topics (including annual totals from 2000 through 2009) is provided in Tables 48, 49, 59, 60, and 64.

Victim profile

- The average age of the officers who were accidentally killed in 2009 was 35 years.
- In 2009, the average length of law enforcement service of the 47 officers accidentally killed in the line of duty was 9 years.
- Of the 47 officers who were accidentally killed, 44 were white and 3 were black.
- All 47 officers were male.

More information about these topics is provided in Tables 53, 54, 55, 56, 57, and 58.

Circumstances

- Thirty-four of the 47 officers who were accidentally killed in the line of duty in 2009 died as a result of automobile accidents. Six officers were struck by vehicles, 3 officers died in motorcycle accidents, and 4 officers died during other types of accidents.

- Of the 6 officers struck by vehicles, 3 were executing a traffic stop or roadblock, and 3 officers were directing traffic or assisting motorists.

- Two officers were accidentally shot as a result of crossfire or other firearm mishap.

More information about this topic (including a complete breakdown of the types of circumstances in which officers accidentally died) is provided in Tables 61, 62, 63, and 64.

Regional and outlying area breakdowns

Of the 47 officers accidentally killed in the line of duty in 2009:

- 21 officers were employed by law enforcement agencies in the South.

- 12 officers were employed by law enforcement agencies in the West.

- 8 officers were employed by law enforcement agencies in the Midwest.

- 6 officers were employed by law enforcement agencies in the Northeast.

More information about this topic (including annual totals from 2000 through 2009) is provided in Table 48.

Months, days, and times of incidents

Months

- In 2009, agencies reported the most accidental deaths (9) in January.

Days

- More officers (10) were fatally injured in accidents on Thursday in 2009 than on any other day of the week.

Times

- Twenty-five officers were fatally injured in accidents that occurred between the hours of 12:01 p.m. and midnight, and 22 officers were killed in accidents between 12:01 a.m. and noon.

More information about these topics (including annual totals from 2000 through 2009) is provided in Tables 50, 51, and 52.

Law Enforcement Officers Assaulted

The following information concerns duly sworn city, university and college, county, state, and tribal law enforcement officers who were assaulted in the line of duty in 2009 and met certain other criteria.

Overview

- The FBI collected assault data from 11,451 law enforcement agencies that employed 556,155 officers in 2009. These officers provided service to more than 243 million persons (79.4 percent of the Nation's population). (Based on Table 65.)
- Law enforcement agencies reported that 57,268 officers were assaulted while performing their duties.
- The rate of officer assaults in 2009 was 10.3 assaults per 100 sworn officers.

More information about these topics is provided in Tables 65, 66, 70, and 71.

Injuries

- Of the officers assaulted, 26.2 percent sustained injuries.
- 27.6 percent of the officers who were attacked by persons using personal weapons (e.g., hands, fists, or feet) suffered injuries.
- 13.3 percent of the officers who were assaulted by persons with knives or other cutting instruments were injured.
- 8.8 percent of officers who were attacked by persons with firearms suffered injuries.
- 23.5 percent of officers who were attacked by persons with other dangerous weapons were injured.

More information about this topic is provided in Tables 65, 66, and 70.

Times of incidents

- The largest percentage of assaults on officers (16.0 percent) happened from 12:01 a.m. to 2 a.m.

- The smallest percentage of assaults on officers (2.4 percent) occurred from 6:01 a.m. to 8 a.m.

More information about this topic is provided in Table 67.

Circumstances

- Of all officers who were assaulted in 2009, the largest percentage (32.6 percent) were responding to disturbance calls (family quarrels, bar fights, etc.).

- 15.4 percent of the officers assaulted were attempting other arrests.

- 12.7 percent of the officers assaulted were handling or transporting prisoners.

More information about this topic is provided in Tables 68, 69, and 73.

Clearances

Law enforcement agencies can clear offenses by arrests or exceptional means (i.e., when law enforcement can identify the perpetrator but are unable to make an arrest due to circumstances beyond their control, such as the death or suicide of the subject).

- In 2009, law enforcement agencies cleared 89.2 percent of the 57,268 reported assaults on law enforcement officers.

- By type of circumstance, agencies cleared the greatest percentage (91.1) of assaults on officers attempting other arrests.

More information about this topic is provided in Table 68.

Assignments

- 61.9 percent of the officers who were assaulted were assigned to 1-officer vehicle patrols.
- 18.9 percent of the officers who were assaulted were assigned to 2-officer vehicle patrols.
- 4.8 percent of officers who were assaulted were assigned to detective duties or special assignments.
- 14.5 percent of officers were assigned to other duties when they were assaulted in the line of duty.

(Based on Table 69.)

Weapons

- In 2009, the majority of officers who were assaulted in the line of duty (81.4 percent) were attacked by persons using personal weapons.
- 3.5 percent of the officers were assaulted by persons with firearms.
- 1.5 percent of the officers were assaulted by persons with knives or other cutting instruments.
- 13.6 percent of the officers were assaulted by persons with other dangerous weapons.

More information about this topic is provided in Tables 70, 71, 72, and 73.

Property Crime

Definition

In the FBI's Uniform Crime Reporting (UCR) Program, property crime includes the offenses of burglary, larceny-theft, motor vehicle theft, and arson. The object of the theft-type offenses is the taking of money or property, but there is no force or threat of force against the victims. The property crime category includes arson because the offense involves the destruction of property; however, arson victims may be subjected to force. Because of limited participation and varying collection procedures by local law enforcement agencies, only limited data are available for arson. Arson statistics are included in trend, clearance, and arrest tables throughout *Crime in the United States*, but they are not included in any estimated volume data. The arson section in this report provides more information on that offense.

Data collection

The data presented in *Crime in the United States* reflect the Hierarchy Rule, which requires that only the most serious offense in a multiple-offense criminal incident be counted. In descending order of severity, the violent crimes are murder and nonnegligent manslaughter, forcible rape, robbery, and aggravated assault, followed by the property crimes of burglary, larceny-theft, and motor vehicle theft. Although arson is also a property crime, the Hierarchy Rule does not apply to the offense of arson. In cases in which an arson occurs in conjunction with another violent or property crime, both crimes are reported, the arson and the additional crime.

Overview

- In 2010, there were an estimated 9,082,887 property crime offenses in the Nation.

- The 2-year trend showed that property crime decreased 2.7 percent in 2010 compared with the 2009 estimate. The 5-year trend, comparing 2010 data with that of 2006, showed a 9.3 percent drop in property crime.

- In 2010, the rate of property crime was estimated at 2,941.9 per 100,000 inhabitants, a 3.3 percent decrease when compared with the rate in 2009. The 2010 property crime rate was 12.1 percent lower than the 2006 rate and 19.6 percent below the 2001 rate. (See Tables 1 and 1A.)

- Larceny-theft accounted for 68.1 percent of all property crimes in 2010. Burglary accounted for 23.8 percent and motor vehicle theft for 8.1 percent. (Based on Table 1.)

- Property crimes in 2010 resulted in losses estimated at 15.7 billion dollars. (Based on Tables 1 and 23.)

What you won't find on this page

Clearance and arrest data for property crimes.

Violent Crime

Definition

In the FBI's Uniform Crime Reporting (UCR) Program, violent crime is composed of four offenses: murder and nonnegligent manslaughter, forcible rape, robbery, and aggravated assault. Violent crimes are defined in the UCR Program as those offenses which involve force or threat of force.

Data collection

The data presented in *Crime in the United States* reflect the Hierarchy Rule, which requires that only the most serious offense in a multiple-offense criminal incident be counted. The descending order of UCR violent crimes are murder and nonnegligent manslaughter, forcible rape, robbery, and aggravated assault, followed by the property crimes of burglary, larceny-theft, and motor vehicle theft. Although arson is also a property crime, the Hierarchy Rule does not apply to the offense of arson. In cases in which an arson occurs in conjunction with another violent or property crime, both crimes are reported, the arson and the additional crime.

Overview

- In 2010, an estimated 1,246,248 violent crimes occurred nationwide, a decrease of 6.0 percent from the 2009 estimate.

- When considering 5- and 10-year trends, the 2010 estimated violent crime total was 13.2 percent below the 2006 level and 13.4 percent below the 2001 level.

- There were an estimated 403.6 violent crimes per 100,000 inhabitants in 2010.

- Aggravated assaults accounted for the highest number of violent crimes reported to law enforcement at 62.5 percent. Robbery comprised 29.5 percent of violent crimes, forcible rape accounted for 6.8 percent, and murder accounted for 1.2 percent of estimated violent crimes in 2010.

- Information collected regarding type of weapon showed that firearms were used in 67.5 percent of the Nation's murders, 41.4 percent of robberies, and

20.6 percent of aggravated assaults. (Weapons data are not collected for forcible rape.) (See Expanded Homicide Data Table 7, Robbery Table 3, and the Aggravated Assault Table.)

What you won't find on this page

Clearance and arrest data for violent crime.

Arrests

Definition

The FBI's Uniform Crime Reporting (UCR) Program counts one arrest for each separate instance in which a person is arrested, cited, or summoned for an offense. The UCR Program collects arrest data on 28 offenses, as described in Offense Definitions. (Please note that, beginning in 2010, the UCR Program no longer collected data on runaways.) Because a person may be arrested multiple times during a year, the UCR arrest figures do not reflect the number of individuals who have been arrested; rather, the arrest data show the number of times that persons are arrested, as reported by law enforcement agencies to the UCR Program.

Data collection-juveniles

The UCR Program considers a juvenile to be an individual under 18 years of age regardless of state definition. The program does not collect data regarding police contact with a juvenile who has not committed an offense, nor does it collect data on situations in which police take a juvenile into custody for his or her protection, e.g., neglect cases.

Overview

- Nationwide, law enforcement made an estimated 13,120,947 arrests (except traffic violations) in 2010. Of these arrests, 552,077 were for violent crimes and 1,643,962 were for property crimes.

- The highest number of arrests were for drug abuse violations (estimated at 1,638,846 arrests), driving under the influence (estimated at 1,412,223), and larceny-theft (estimated at 1,271,410).

- The estimated arrest rate for the United States in 2010 was 4,257.6 arrests per 100,000 inhabitants. The arrest rate for violent crime (including murder and nonnegligent manslaughter, forcible rape, robbery, and aggravated assault) was 179.2 per 100,000 inhabitants, and the arrest rate for property crime (burglary, larceny-theft, motor vehicle theft, and arson) was 538.5 per 100,000 inhabitants.

- Two-year arrest trends show violent crime arrests declined 5.3 percent in 2010 when compared with 2009 arrests, and property crime arrests decreased 4.7 percent when compared with the 2009 arrests.

- Arrests of juveniles for all offenses decreased 9.7 percent in 2010 when compared with the 2009 number; arrests of adults declined 3.7 percent.

- Nearly three-quarters (74.5 percent) of the persons arrested in the Nation during 2010 were males. They accounted for 80.5 percent of persons arrested for violent crime and 62.4 percent of persons arrested for property crime.

- In 2010, 69.4 percent of all persons arrested were white, 28.0 percent were black, and the remaining 2.6 percent were of other races.

Expanded arrest data

Expanded data about arrests include information about the age, gender, and race of the arrestees. These data are available in the following tables:

Age: Tables 32, 34, 36, 38, 39, 40, 41, 44, 46, 47, 50, 52, 53, 56, 58, 59, 62, 64, and 65

Gender: Tables 33, 35, 37, 39, 40, 42, 45, 48, 51, 54, 57, 60, 63, and 66

Race: Tables 43, 49, 55, 61, and 67

What you won't find on this page

- Clearance data for violent crimes and property crimes.

- The number of persons who were convicted, prosecuted, and/or imprisoned. The UCR Program does not collect this information.

FIRE LOSS IN THE UNITED STATES DURING 2010

Michael J. Karter, Jr.

September 2011

National Fire Protection Association
Fire Analysis and Research Division

Abstract
U.S. fire departments responded to an estimated 1,331,500 fires. These fires resulted in 3,120 civilian fire fatalities, 17,720 civilian fire injuries and an estimated $11,593,000,000 in direct property loss. There was a civilian fire death every 169 minutes and a civilian fire injury every 30 minutes in 2010. Home fires caused 2,640, or 85%, of the civilian fire deaths. Fires accounted for five percent of the 28,205,000 total calls. Eight percent of the calls were false alarms; sixty-six percent of the calls were for aid such as EMS.

Keywords: fire fatalities, fire injuries, fire losses, fire statistics, intentional fires, region fire department calls, intentional fires.

Acknowledgements
The NFPA gratefully thanks the many fire departments that responded to the 2010 National Fire Experience Survey for their continuing efforts for providing us in a timely manner the data so necessary to make national projections.

The survey project manager and author of the report gratefully thanks the many members of NFPA staff who worked on this year's survey including Frank Deely, John Baldi, and John Conlon for editing the survey forms and their follow-up calls to fire departments; and Norma Candeloro for handling the processing of survey forms and typing this report.

NFPA NO. FLX10

Overview of 2010 U.S. Fire Experience

Number of Fires

- 1,331,500 fires were attended by public fire departments, a slight decrease of 1.3% from the year before.

- 482,000 fires occurred in structures, a very slight increase of 0.3%.

- 384,000 fires or 80% of all structure fires occurred in residential properties.

- 215,500 fires occurred in vehicles, a decrease of 1.6% from the year before.

- 634,000 fires occurred in outside properties, a decrease of 2.3%.

- What do these fire frequencies above mean? Every 24 seconds, a fire department responds to a fire somewhere in the nation. A fire occurs in a structure at the rate of one every 65 seconds, and in particular a residential fire occurs every 82 seconds. Fires occur in vehicles at the rate of 1 every 146 seconds, and there's a fire in an outside property every 50 seconds.

Civilian Fire Deaths

- 3,120 civilian fire deaths occurred in 2010, an increase of 3.7%.
- About 85% of all fire deaths occurred in the home.
- 2,640 civilian fire deaths occurred in the home (1-and-2 family dwelling homes and apartments), an increase of 2.9%.
- 285 civilians died in highway vehicle fires.
- 90 civilians died in nonresidential structure fires.
- Nationwide, there was a civilian fire death every 169 minutes.

Civilian Fire Injuries

- 17,720 civilian fire injuries occurred in 2010, an increase of 3.9%. This estimate for civilian injuries is on the low side, because many civilian injuries are not reported to the fire service.
- 13,800 of all civilian injuries occurred in residential properties, while 1,620 occurred in nonresidential structure fires.
- Nationwide, there was a civilian fire injury every 30 minutes.

Property Damage

- An estimated $11.6 billion in property damage occurred as a result of fire in 2010, a decrease of 7.5% from last year.

- $9.7 billion of property damage occurred in structure fires.

- $7.1 billion of property loss occurred in residential properties.

Intentionally Set Fires

- An estimated 27,500 intentionally set structure fires occurred in 2010, an increase of 3.8%.

- Intentionally set fires in structures resulted in 200 civilian deaths, an increase of 17.7%.

- Intentionally set structure fires also resulted in $585,000,000 in property loss, a decrease of 14.5%.

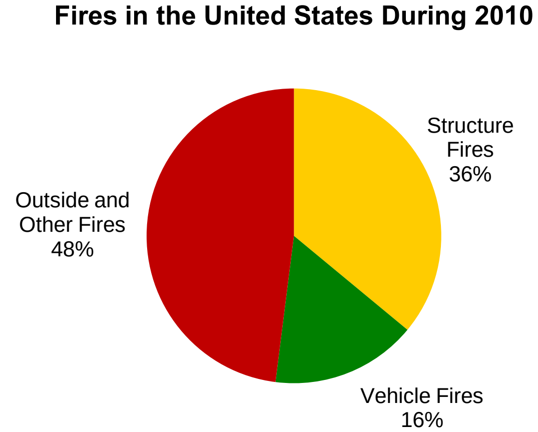
- 14,000 intentionally set vehicle fires occurred, a decrease of 6.7% from a year ago, and caused $89,000,000 in property damage, a decrease of 17.6% from a year ago.

List of Tables and Figures

Fires in the United States During 2010

1,331,500 fires were reported in the U.S. during 2010.

- down **1%** from 2009
- **3,120** civilian fire deaths
- On civilian death occurred every two hours and 49 minutes
- **17,720** civilian fire injuries
- One civilian injury occurred every 30 minutes
- **$11.6 billion** in property damage
- A fire department responded to a fire every 24 seconds



482,000 structure fires occurred in the U.S. during 2010.

- Less than 1% increase from 2009
- **2,755** civilian fire deaths
- **15,420** civilian fire injuries
- **$9.7 billion** in property damage
- One structure fire was reported every 65 seconds

215,500 vehicle fires occurred in the U.S. during 2010.

- down **1%** from 2009
- **310** civilian fire deaths
- **1,590** civilian fire injuries
- **$1.4 billion** in property damage
- One vehicle fire was reported every 146 seconds

634,000 outside and other fires occurred in the U.S. during 2010.

- down **2%** from 2009
- **55** civilian fire deaths
- **710** civilian fire injuries
- **$501 million** in property damage
- One outside fire was reported every 50 seconds

NFPA’s Fire Safety Resources

NFPA´s wealth of fire-related research includes investigations of technically significant fire incidents, fire data analysis, and the Charles S. Morgan Technical Library, one of the most comprehensive fire literature collections in the world. In addition, NFPA´s Fire Protection Research Foundation is a source of independent fire test data. Find out more at: www.nfpa.org/research

Properly installed and maintained smoke alarms are necessary to provide a warning of any fire to all occupants. You can find out more information about smoke alarms here: NFPA Smoke Alarm Information

Home fire sprinkler systems provide even greater protection. These systems respond quickly to reduce the heat, flames, and smoke from a fire until help arrives. More information about home fire sprinklers may be found at www.firesprinklerinitiative.org

Research ↔ **Advocacy**

Codes & Standards ↔ **Public Education**

NFPA also develops, publishes, and disseminates more than 300 consensus codes and standards intended to minimize the possibility and effects of fire and other risks. Among these are:

NFPA1: Fire Code:

NFPA 101: Life Safety Code®:

NFPA 13R: Standard for the Installation of Sprinkler Systems in Residential Occupancies up to and Including Four

For consumers: NFPA has consumer safety information regarding causes, escape planning, fire & safety equipment, and many other topics.

For Kids: Sparky.org has important information for kids delivered via fun games, activities, and cartoons.

For public educators: Resources on fire safety education programs, educational messaging, grants & awards, and many other topics.

Number of Fires

In 2010, public fire departments responded to 1,331,500 fires in the United States, according to estimates based on data the NFPA received from fire departments responding to its 2010 National Fire Experience Survey (see Tables 1 and 2). (A fire department is a public organization that provides fire prevention, fire suppression and associated emergency and non-emergency services to a jurisdiction such as a county, municipality, or organized fire district.) This represents a slight decrease of 1.3% from last year, and is the lowest since the NFPA started using its current survey methodology in 1977-78[1].

There was an estimated 482,000 structure fires reported to fire departments in 2010, a very slight increase of 0.3%, or virtually no change from a year ago. For the 1977-2010 period, the number of structure fires were at their peak in 1977 when 1,098,000 structure fires occurred (see Figure 1). The number of structure fires then decreased quite steadily particularly in the 1980s to 688,000 by the end of 1989 for an overall decrease of 37.3% from 1977. Since 1989, structure fires again decreased steadily for an overall decrease of 24.7% to 517,500 by the end of 1998. They stayed in the 505,000 to 530,500 area from 1999 to 2008, before the decrease to 480,500 in 2009, and the slight increase in 2010.

Fire incident rates by community size were examined for the 2006-2010 period (see Figure 2). The smallest communities (populations less than 2,500) had the highest rate with 11.7 which was more than twice the average national rate.

Of the structure fires, 384,000 were residential fires, accounting for 79.7% of all structure fires, and a slight increase of 1.9% from a year ago. Of the residential structure fires, 279,000 occurred in one- and two-family homes, accounting for 57.9% of all structure fires. Another 90,500 occurred in apartments accounting for 18.8% of all structure fires.

For nonresidential structure fires, some property types showed notable changes: a decrease of 17.2% to 12,000 in public assembly properties, an increase of 9.1% to 18,000 in stores and offices, and a decrease of 11.1% to 20,000 in special structure properties.

There were an estimated 184,500 highway vehicle fires in 2010, a decrease of 3.2% and 31,000 other vehicle fires, an increase of 8.8%.

For the 1977-2009 period, the number of outside fires were at their high in 1977 when 1,658,500 outside fires occurred. The number of outside fires decreased steadily the next six years to 1,011,000 in 1983 for a considerable decrease of 39.0% from 1977. Outside fires changed little for the rest of the 1980s except for 1988 when 1,214,000 occurred. Outside fires dropped to 910,500 in 1993, and stayed near the 1,000,000 level

Table 1
Estimates of 2010 Fires, Civilian Deaths, Civilian Injuries and Property Loss in the United States

	Estimate	Range[1]	Percent Change From 2009
Number of Fires	1,331,500	1,311,500 to 1,351,500	-1.3
Number of Civilian Deaths	3,120	2,810 to 3,430	+3.7
Number of Civilian Injuries	17,720	16,820 to 18,620	+3.9
Property Loss[2]	$11,593,000,000	$11,283,000,000 to 11,903,000,000	-7.5**

The estimates are based on data reported to the NFPA by fire departments that responded to the 2010 National Fire Experience Survey.

[1] These are 95 percent confidence intervals.

[2] This includes overall direct property loss to contents, structures, vehicles, machinery, vegetation, and anything else involved in a fire. It does not include indirect losses. No adjustment was made for inflation in the year-to-year comparison.

**Change was statistically significant at the .01 level.

the next three years. From 1997 to 2002, the number of outside fires stayed in the 839,000 to 861,500 level except for 1999, then rose in 2005 and 2006, before declining during 2007-2010 to 634,000 at the end of 2010.

Of the outside fires, there were an estimated 304,000 brush, grass and wildland fires in 2010, a very slight decrease of 0.7%, while an estimated 173,000 rubbish fires occurred, a very slight increase of 1.2%, or virtually no change from a year ago.

Civilian Fire Deaths

The 1,331,500 fires reported by fire departments in the U.S. in 2010, resulted in an estimated 3,120 civilian deaths based on data reported to the NFPA. This is an increase of 3.7% from a year ago. The nature of the increase is better understood when results are examined by property type.

An estimated 2,665 civilians died in residential fires in 2010, an increase of 2.9%. Of these deaths, 440 occurred in apartment fires. Another 2,200 died in one- and two-family homes, an increase of 4.8%.

In all, fires in the home (one- and two-family homes including manufactured homes and apartments) resulted in 2,640 civilian deaths, an increase of 2.9% from a year ago. Looking at trends in civilian deaths since 1977-78[1], several observations are worth noting (see Figure 3). Home fire deaths were at their peak in 1978 when 6,015 fire deaths occurred. Home fire deaths then decreased steadily during the 1979-82 period except for 1981, and decreased a substantial 20% during the period to 4,820 by the end of 1982. From 1982 to 1988, the number of home fire deaths stayed quite level in the 4,650 to 4,950 area except for 1984 when 4,075 fire deaths occurred. From 1989 to 1996 home fire deaths continued to decline and stayed in the 3,420 to 4,340 area. From 1997 onward home fire deaths have generally continued to decline with the number of deaths staying in the 2,550 to 3,200 area since 2001.

Overall for the 1977-2010 period, the number of home fire deaths decreased from 5,865 in 1977 to 2,640 in 2010 for a decrease of 55%. The number of home fire incidents also declined steadily for an overall decrease of 49% for the same period. When the death rate per 1,000 home fire incidents is looked at (Figure 3), there is no steady decline, but rather the rate fluctuates considerably up and down[2]. In fact, the death rate per 1,000 home fires was 8.1 in 1977 and 7.1 in 2010 for a decrease of 12%. These results suggest that even though the number of home fires and home fire deaths declined similarly during the period, the death rate did not, and that given there is a home fire, the fire death rate risk has not changed much for the period.

With home fire deaths still accounting for 2,640 fire deaths or 85% of all civilian deaths, fire safety initiatives targeted at the home remain the key to any reductions in the overall fire death toll. Five major strategies are: First, more widespread public fire safety education is needed on how to prevent fires and how to avoid serious injury or death if fire occurs. Information on the common causes of fatal home fires should continue to be used in the design of fire safety education messages. Second, more people must use and maintain smoke detectors and develop and practice escape plans. Third, wider use of residential sprinklers must be aggressively pursued. Fourth, additional ways must be sought to make home products more fire safe. The regulations requiring more child-resistant lighters are a good example, as are requirements for cigarettes, with reduced ignition strength (generally called “fire-safe” cigarettes). The wider use of upholstered furniture and mattresses that are more resistant to cigarette ignitions is an example of change that has already accomplished much and will continue to do more. Fifth, the special fire safety needs of high-risk groups, e.g., the young, older adults, and the poor need to be addressed.[3,4]

Also in 2010, 90 civilians that died in nonresidential structure fires, a decrease of 14.3%.

Civilian fire death rates per million people by community size were examined (Figure 4). The smallest communities (populations less than 2,500) had the highest rate with 10.8, which was almost twice the national average rate.

Of the 2,755 civilians that died in structure fires, 200 or 7.3% died in fires that were intentionally set.

Also in 2010, an estimated 285 civilians died in highway vehicle fires, an increase of 9.6%.

Table 4
Estimates of 2010 Civilian Fire Deaths and
Injuries by Property Use

Property Use	Civilian Deaths: Estimate	Civilian Deaths: Percent Change From 2009	Civilian Deaths: Percent of all Civilian Deaths	Civilian Injuries: Estimate	Civilian Injuries: Percent Change From 2009	Civilian Injuries: Percent of all Civilian Injuries
Residential (total)	2,665	+2.9	85.4	13,800	+5.8	77.9
One-and-Two-Family Homes[1]	2,200	+4.8	70.5	9,400	+1.1	53.1
Apartments	440	-5.4	14.1	3,950	+17.9*	22.3
Other Residential[2]	25	0	0.8	450	+12.5	2.5
Non-residential Structures[3]	90	-14.3	2.9	1,620	-4.1	9.1
Highway Vehicles	285	+9.6	9.1	1,440	-1.0	8.1
Other Vehicles[4]	25	+25.0	0.8	150	-3.2	0.9
All Other[5]	55	+57.1	1.8	710	+1.4	4.0
Total	3,120	+3.7		17,720	+3.9	

Estimates are based on data reported to the NFPA by fire departments that responded to the 2010 National Fire Experience Survey. Note that most changes were not statistically significant; considerable year-to-year fluctuation is to be expected for many of these totals because of their small size.

[1] This includes manufactured homes.

[2] Includes hotels and motels, college dormitories, boarding houses, etc.

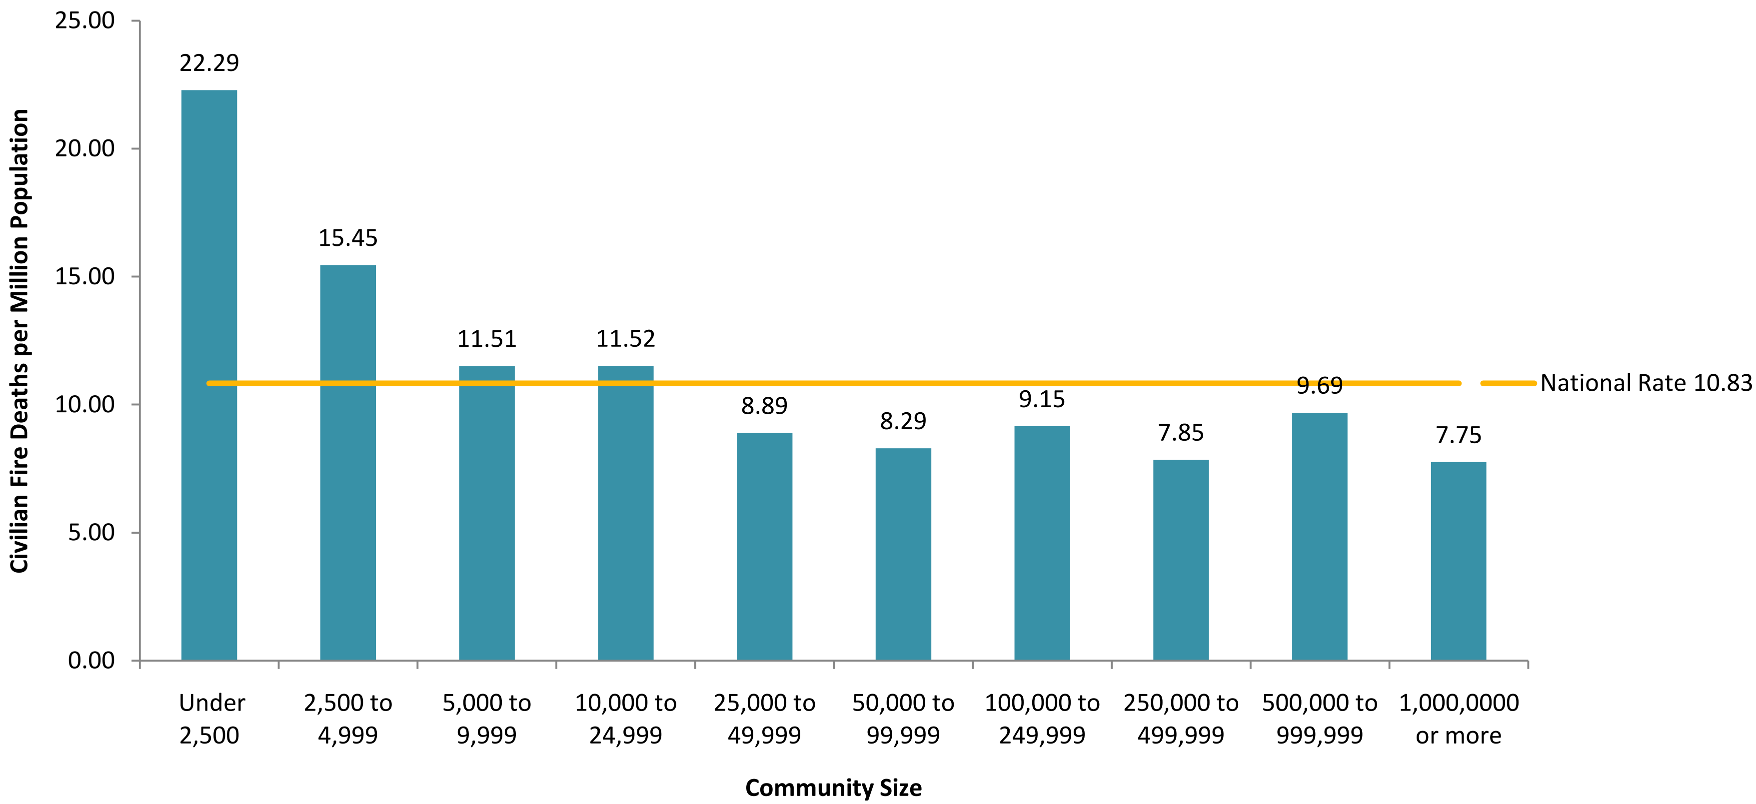
[3] This includes public assembly, educational, institutional, store and office, industry, utility, storage, and special structure properties.

[4] This includes trains, boats, ships, farm vehicles and construction vehicles.

[5] This includes outside properties with value, as well as brush, rubbish, and other outside locations.

*Change was statistically significant at the .05 level.

Figure 4. Civilian Fire Deaths per Million Population by Community Size (2006-2010)



Source: NFPA Survey of Fire Departments (2006-2010)

Civilian Fire Injuries

Results based on data reported to the NFPA indicate that in addition to 3,120 civilian fire deaths, there were an estimated 17,720 civilian fire injuries in 2010. This represents an increase of 3.9% from a year ago, and is the highest since 2005 when 17,925 injuries occurred.

Estimates of civilian fire injuries are on the low side, because many civilian injuries are not reported to the fire service. For example, many injuries occur at small fires that fire departments do not respond to, and sometime when departments do respond they may be unaware of injured persons that they did not transport to medical facilities.

The NFPA estimates that there were 13,800 civilians injured in residential properties, an increase of 5.8%. Of these injuries 9,400 occurred in one- and two-family homes, and 3,950 occurred in apartments. There were also 1,620 civilians injured in nonresidential structures in 2010.

For the 1977-2010 period, the number of civilian injuries has ranged from a high of 31, 275 in 1983 to a low of 16,400 in 2006 for an overall decrease of 48%. There was no consistent pattern going up or down until 1995, when injuries fell roughtly 5,000 in 1994-95 to 25,775. From 1996 to 2002, injuries declined 28% to 18,425 by the end of 2002. Since 2002, civilian injuries have been in the range of 16,400 to 18,425.

Property Loss

The NFPA estimates that the 1,331,500 fires responded to by the fire service caused $11,593,000,000 in property damage in 2010. This is a highly significant decrease of 7.5%.

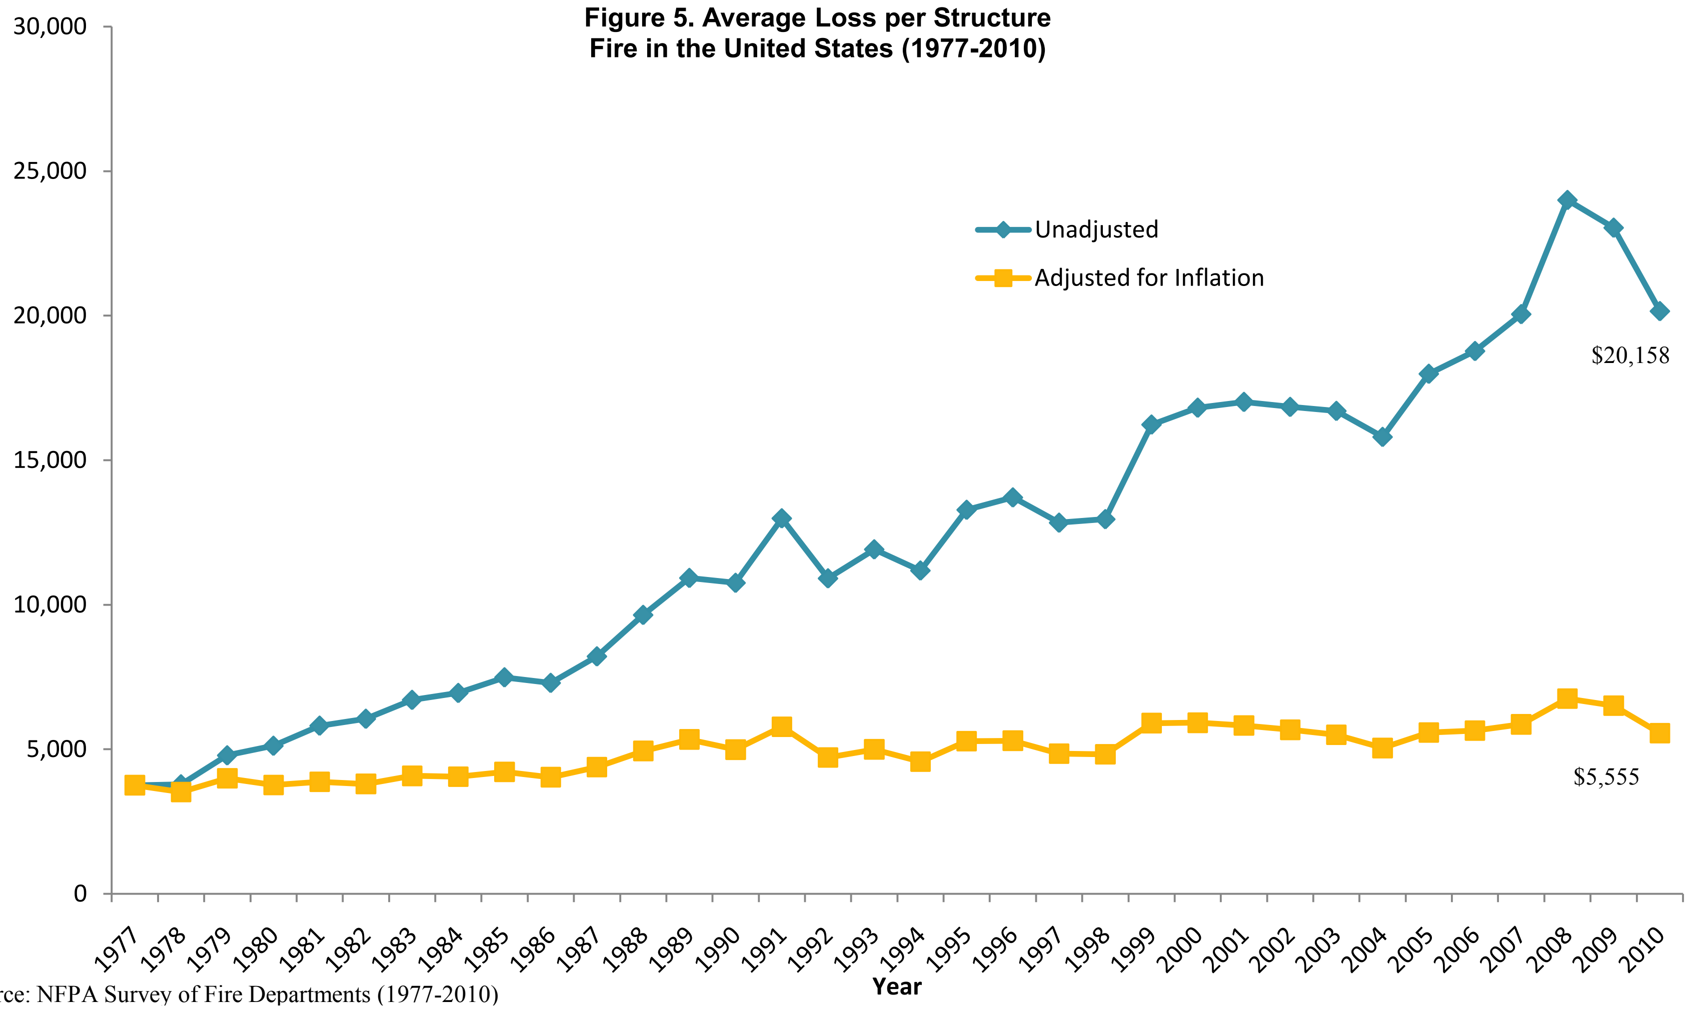
Fires in structures resulted in $9,716,000,000, in property damage, a significant decrease of 10.4%. Average loss per structure fire was $20,158, a significant decrease of 10.6%.

Over the 1977-2010 period, and excluding the events of 9/11/01, the average loss per structure fire was $3,757 in 1977 and $20,158 in 2010 for an overall increase of 436%. When property loss is adjusted for inflation, the increase in the average structure fire loss between 1977 and 2010 is 48%.

Of the property loss in structures, $7,079,000,000 occurred in residential properties, a decrease of 9.2%. An estimated $5,895,000,000 occurred in one- and two-family homes, a decrease of 7.8%. An estimated $1,033,000,000 also occurred in apartments.

Other property damage figures worth noting for 2010 include: $421,000,000 in public assembly properties, a significant decrease of 44.4% (this decrease reflects a s009 casino fire that resulted in $340,000,000 in property loss); $515,000,000 in industrial properties, a decrease of 10.0%; $389,000,000 in fires outside of a structure with value involved, a significant increase of 27.6% (this increase reflects the Fourmile Canyon Wildfire in Colorado with an estimated property loss of $217,000,000).

It should be kept in mind that property loss totals can change dramatically from year to year because of the impact of occasional large loss fires. The NFPA provides an analysis of these large loss fires in the November/December issue of *NFPA Journal* every year.



Source: NFPA Survey of Fire Departments (1977-2010)

Intentionally Set Fires

Based on data reported by fire departments in the survey, the NFPA estimates there were 27,500 intentionally set structure fires in 2010, an increase of 3.8% from a year ago (see Table 5). (Note the NFPA survey is based on the NFIRS 5.0 system. This system has an intentionally set category which is equivalent to the old incendiary category. There is no new equivalent to the old suspicious category, which has been eliminated.)

These intentionally set structure fires resulted in an estimated 200 civilian deaths, an increase of 17.7%. These set structure fires also resulted in $585,000,000 in property loss, a decrease of 14.5%.

Also in 2010, there were an estimated 14,000 intentionally set vehicle fires, a decrease of 6.7% from a year ago. These set vehicle fires resulted in $89,000,000 in property loss, a decrease of 17.6% from a year ago.

Table 5
Estimate of 2010 Losses in
Intentionally Set Structure Fires

Intentionally[2] Set Structure Fires	Estimate	Percent change from 2008
Number of Structure Fires	27,500	+3.8
Civilian Deaths	200	+17.7
Property Loss[1]	$585,000,000	-14.5

The estimates are based on data reported to the NFPA by fire departments that responded to the 2010 National Fire Experience Survey.

[1] This includes overall direct property loss to contents, structure, a vehicle, machinery, vegetation, or anything else involved in a fire. It does not include indirect losses, e.g., business interruption or temporary shelter costs. No adjustment was made for inflation in the year-to-year comparison.

[2]The NFPA Survey is based on the NFIRS 5.0 system. This system has an intentionally set category which is equivalent to the old incendiary category. There is no new equivalent to the old suspicious category, which has been eliminated.

Region

Fire loss rates nationwide and by region can be seen in Table 6. The Midwest and the South with 4.9 fires per thousand people had the highest fire incident rates..

The South (13.0) and the Midwest (12.6) had the highest civilian death rate per million population. In recent years, the Midwest and the South have had the highest fire incident and civilian death rates.

The Northeast (76.6) and the Midwest (71.1) had the highest civilian injury rates per million population.

The Midwest with $46.0 property loss per capita had the highest property loss rate.

Fire incident rates by region and community size are shown in Table 8. The Northeast had the highest rate for communities of 500,000 or more, the Midwest had the highest rate for communities of 250,000 to 499,999, and the South had the highest rates for communities of 10,000 to 99,999, and smaller communities (population of less than 10,000)..

Civilian fire deaths per million population by region and community size are shown in Table 9. The Midwest had the highest rate for communities of 100,000 to 499,999 and the smallest communities (population of less then 5,000 population), the West had the highest rate for communities of 5,000 to 9,999, and the South had the highest rates for communities of 10,000 to 99,999.

Civilian fire injuries per million population by region and community size are shown in Table 9. The West had the highest rates for communities of 500,000 or more (though only the South and the West had sufficient data for this community size), and the South had the highest rate for communities of 100,000 to 249,999. The Midwest had the highest rates for communities of 250,000 to 499,999, communities of 10,000 to 24,999, and communities less than 2,500 population, and the Northeast had the highest rates for communities of 25,000 to 99,999, and communities of 2,500 to 9,999.

Property loss per capita by region and community size are shown in Table 10. The South had the highest rates for most community sizes, and the West had the highest rate for communities of 25,000 to 49,999.

Table 6
Fire Loss Rates Nationwide and by Region, 2010

Region	Number of Fires per Thousand Population	Civilian Deaths per Million Population	Civilian Injuries per Million Population	Property Loss per Capita
Nationwide	4.3	10.1	57.3	$37.5
Northeast	4.4	6.8	76.6	31.2
Midwest	4.9	12.6	71.1	46.0
South	4.9	13.0	51.6	38.7
West	2.7	5.7	38.8	32.5

SURVEY METHODOLOGY

Each year, based on a sample survey of fire departments across the country, the NFPA estimates the national fire problem as measured by the number of fires that public fire departments attend, and the resulting deaths, injuries and property losses that occur. This report summarizes key findings based on the NFPA Survey for 2010 Fire Experience. This section explains the major steps in conducting the 2010 survey.

Sample Selection

The NFPA currently has 30,170 public fire departments listed in the US in its Fire Service Inventory (FSI) file. Based on desired levels of statistical precision for the survey results and the staff available to process, edit, and follow up on the individual questionnaires the NFPA determined that 3,000 fire departments were a reasonable number for the 2010 sample.

Because of the variation in fire loss results by community size, fire departments were placed in one of the following 10 strata by size of community protected:

1,000,000 and up
500,000 to 999,999
250, 0000 to 499,999
100,000 to 249,999
50,000 to 99,999
25,000 to 49,999
10,000 to 24,999
5,000 to 9,999
2,500 to 4,999
Under 2,500

Sample sizes for the individual strata were chosen to ensure the best estimate of civilian deaths in one-and two-family dwellings, the statistic that most aptly reflects the overall severity of the fire problem. All departments that protect 50,000 people or more were included. These 800 departments in the five highest strata protect 147,989,000.

For the remaining five population strata, assuming response rates similar to the past two years for the five highest strata, a total sample of 2,640 was indicated. Sample sizes for individual strata were calculated using a methodology that assured optimum sample allocations[6]. Based on the average variation in civilian deaths in one- and two-family dwellings by stratum for the last two years and on the estimated number of fire departments, appropriate relative sample weights were determined. Then the corresponding sample sizes by stratum were calculated. The sample size by stratum was then adjusted based on the response rates from the last two years' returns. A sample size of 18,861 was found to be necessary to obtain the desired total response of 3,000 fire departments. For all strata, were a sample was necessary, departments were randomly selected.

Data Collection

The fire departments selected for the survey were sent the 2010 NFPA Fire Experience Questionnaire during the 2nd week of January 2011. A second mailing was sent in mid-March to fire departments that had not responded to the first mailing. A total of 2,650 departments responded to the questionnaire 2,182 to the first mailing and 468 to the second.

Table 14 shows the number of departments that responded by region and size of community. The overall response rate was 14%, although response rates were considerably higher for departments protecting larger communities than they were for departments protecting smaller communities. The 2,650 departments that did respond protect 112,153,200 people or 36% of the total U.S. population.

After the NFPA received the surveys, technical staff members of the Fire Analysis and Research Division reviewed them for completeness and consistency. When appropriate, they followed up on questions with a telephone call.

After the edit, procedures were completed, the survey data were keyed to a computer file, where additional checks were made. The file was then ready for data analysis and estimation procedures.

Estimation Methodology

The estimation method used for the survey was ratio estimation[7], with stratification by community size. For each fire statistic a sample loss rate was computed for each stratum. This rate consisted of the total for that particular statistic from all fire departments reporting it, divided by the total population protected by the departments reporting the statistic. Note that this means that the departments used in calculating each statistic could be different, reflecting differences in unreported statistics The sample fire loss rates by stratum were then multiplied by population weighing factors to determine the estimates were combined to provide the overall national estimate.

If this method of estimation is to be effective, estimates of the total number of fire departments and the total population protected in each stratum must be accurate. The NFPA makes every effort to ensure that this is the case. The population weights used for

Table 16
Number of Fire Departments Responding to 2010 NFPA Survey, by Region and Community Size

Population of Community	All Regions	Northeast	Midwest	South	West
1,000,000 or more	9	2	0	4	3
500,000 to 999,999	30	1	2	15	12
250,000 to 499,999	35	1	6	18	10
100,000 to 249,999	111	4	19	54	34
50,000 to 99,999	203	19	67	68	49
25,000 49,999	305	38	133	88	46
10,000 to 24,999	534	90	256	128	60
5,000 to 9,999	361	76	153	94	38
2,500 to 4,999	335	57	170	76	32
Under 2,500	727	99	369	154	105
Total	2,650	387	1,175	699	389

the national estimates were developed using the NFPA FSI (Fire Service Inventory) File and U.S. Census population figures.

For each estimate, a corresponding standard error was also calculated[6]. The standard error is a measure of the error caused by the fact that estimates are based on a sampling of fire losses rather than on a complete census of the fire problem. Due to the fact that the survey is based on a random sample, we can be very confident that the actual value falls within the percentage noted in parentheses for the overall national fire loss statistics: number of fires (1.5%), number of civilian deaths (10.0%), number of civilian injuries (5.1%), and property loss (2.7%).

The standard error helps in determining whether year-to-year differences are statistically significant. Differences that were found to be statistically significant were so noted in tables. Property loss estimates are particularly prone to large standard errors because they are sensitive to unusually high losses, and, as a result, large percentage differences from year to year may not always be statistically significant. In 2010, for instance, property damage in industrial properties was estimated to be $515,000,000. This represented a decrease of 10.0% from the year before, but was found not to be statistically significant.

In addition to sampling errors, there are nonsampling errors. These include biases of the survey methodology, incomplete or inaccurate reporting of data to the NFPA, differences in data collection methods by the fire departments responding. As an example of a nonsampling error, most of the fires included in the survey took place in highly populated residential areas, because the fire departments selected for the surveys are primarily public fire departments that protect sizable residential populations. Fires that occur in sparsely populated areas protected primarily by State and Federal Departments of Forestry are not likely to be included in the survey results.

The NFPA Fire Incident Data Organization (FIDO) data base was also used in conjunction with the annual survey to help identify any large loss fires or deaths that the survey might have missed.

The editors of survey data attempted to verify all reported civilian deaths in vehicle fires. They contacted most of the fire departments that reported fire-related deaths in vehicles and found that many of the deaths were indeed the results of fire. In some instances, however, impact was found to have been the cause of death. This effort can have a considerable impact on the estimates.

The results presented in this report are based on fire incidents attended by public fire departments. No adjustments were made for unreported fires and losses (e.g., fires extinguished by the occupant). Also, no adjustments were made for fires attended solely by private fire brigades (e.g., industry and military installations), or for fires extinguished by fixed suppression systems with no fire department response.

Fire Experience of Nonrespondents

A telephone follow-up was made to a sample of nonrespondents to determine whether fire departments that did not respond to the survey experienced fire loss rates similar to those that did respond. This would help the NFPA determine whether we received questionnaires only from departments that had experienced unusually high or low fire losses.

The sample of nonrespondents selected was proportional by state and population of community to the original sample selected for the survey. As a result of these efforts, 157 fire departments were successfully contacted and answered some of the questions about their fire experience.

Table 17 compares fire loss rates for both respondents and nonrespondents. For communities of 100,000 to 249,999, the rates were similar for fires, the respondent rate was 49% higher for civilian deaths, and the nonrespondent rate was 37% higher for property loss (None of these results were statistically significant).

For communities of 50,000 to 99,999, the respondent rate was 10% higher for fires, while the nonrespondent rate was 18% higher for civilian deaths, and 34% higher for property loss. (None of these results were statistically significant).

For communities of 25,000 to 49,999, the nonrespondent rate was 21% higher for fires, and 58% higher for civilian deaths while the respondent rate was 22% higher for property loss. (None of these results were statistically significant).

For communities of 10,000 to 24,999, the nonrespondent rate was 19% higher for fires, while the respondent rate was 122% higher for civilian deaths, and 10% higher for property loss. (Only the civilian death result was statistically significant).

For communities of 5,000 to 9,999, the nonrespondent rate was 26% higher for fires, 48% higher for civilian deaths, and 9% higher for property loss. (None of these results were statistically significant).

Table 17
A Comparison of Respondents and Nonrespondents*
to the 2010 NFPA Survey by Community Size

Population of Community	Number of Fires (Per Thousand Population)				Civilian Deaths (Per Million Population)				Property Loss (Per Capita)			
	Respondents		Nonrespondents		Respondents		Nonrespondents		Respondents		Nonrespondents

5,000 to 9,999	343	5.0	18	6.3	359	12.0	16	17.7	168	51.7	8	56.5

*Some departments did not return the questionnaire. A sample of these nonrespondents was contacted by telephone and questioned about their 2010 fire experience.

Note: ―n‖ refers to the number of departments reporting the statistic.

ns – Data not sufficient.

Definition of Terms

Civilian: The term ―civilian” includes anyone other than a firefighter, and covers public service personnel such as police officers, civil defense staff, non-fire service medical personnel, and utility company employees.

Death: An injury that occurred as a direct result of a fire that is fatal or becomes fatal within one year.

Fire: Any instance of uncontrolled burning. Includes combustion explosions and fires out on arrival. Excludes controlled burning (whether authorized or not), over pressure rupture without combustion, mutual aid responses, smoke scares, and hazardous responses (e.g., oil spill without fire).

Injury: Physical damage that is suffered by a person as a direct result of fire and that requires (or should require) treatment by a practitioner of medicine (physician, nurse, paramedic, EMT) within one year of the incident (regardless of whether treatment was actually received), or results in at least one day of restricted activity immediately following the incident. Examples of injuries resulting from fire are smoke inhalation, burns, wounds and punctures, fractures, heart attacks (resulting from stress under fire condition), strains and sprains.

Property Damage: Includes all forms of direct loss to contents, structure, machinery, a vehicle, vegetation or anything else involved in the fire but not indirect losses, such as business interruption or temporary shelter provisions.

Structure: An assembly of materials forming a construction for occupancy or use in such a manner as to serve a specific purpose. A building is a form of structure. Open platforms, bridges, roof assemblies over open storage or process areas, tents, air-supported, and grandstands are other forms of structures.

Vehicles, Highway and Other: Fires in these instances may have been associated with an accident; however, reported casualties and property loss should be the direct result of the fire only. Highway vehicles include any vehicle designed to operate normally on highways, e.g., automobiles, motorcycles, buses, trucks, trailers (not mobile homes on foundations), etc. Other vehicles include trains, boats and ships, aircraft, and farm and construction vehicles.

Footnotes

1. Note that the NFPA changed its survey methodology in 1977-78, and meaningful comparisons cannot be made with fire statistics estimated before 1977.

2. The downward trend of home fire deaths for the period was examined by a Spearman's rho correlation coefficient and was found to be statistically significant at the .001 level, while for the death rate per 1,000 home fires, there was no statistically significant trend found.

3. John R. Hall, Jr., Characteristics of Home Fire Victims Including Age and Sex, July 2005, Quincy: National Fire Protection Association, Fire Analysis and Research Division.

4. Rita F. Fahy and Alison L. Miller, ―How Being Poor Affects Fire Risk", *Fire Journal*, Vol. 83, No. 1 (January 1989), p. 28.

5. As defined by the U.S. Bureau of the Census, the four regions are: Northeast: Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont. Midwest: Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin. South: Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia. West: Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington and Wyoming.

2005	1,602,000	3,675	17,925	$10.7	$11.9
2006	1,642,500	3,245	16,400	$11.3	$12.2
2007	1,557,500	3,430	17,675	$14.6[8]	$15.4[8]
2008	1,451,500	3,320	16,705	$15.5[9]	$15.7[9]
2009	1,348,500	3,010	17,050	$12.5	$12.7
2010	1,331,000	3120	17,720	$11.6	$11.6

[1]This includes $1.5 billion in damage caused by the Oakland Fire Storm, most of which was lost to homes but for which no detailed breakdown by property type was available.

[2]This includes $809 million in damage caused by Southern California wildfires.

[3]This includes 2,451 civilian deaths that occurred from the events of 9/11/01.

[4]This includes 800 civilian injuries that occurred from the events of 9/11/01.

[5]This includes 340 firefighters at the World Trade Center, September 11, 2001.

[6]This includes $33.44 billion in property loss that occurred from the events of 9/11/01.

[7]This includes the Southern California Wildfires (Cedar and Old Wildfires) with an estimated total property loss of $2,040,000,000. Loss by specific property type for this fire was not available.

[8]This includes the California Fire Storm 2007 with an estimated property damage of $1.8 billion.

[9]This includes the California wildfires 2008 with an estimated property damage of $1.4 billion.

Direct property damage figures do not include indirect losses, like business interruption. Inflation adjustment to 2010 dollars is done using the consumer price index.

2010	482,000	2,755	15,420	$9.7	$9.7

[1] Individual incidents with large loss can affect the total for a given year.
[2] The 1988 figure includes a Norco, Louisiana petroleum refinery with a loss of $330 million.
[3] The 1989 figure includes a Pasadena, Texas polyolefin plant with a loss of $750 million.
[4] The 1991 figure includes the Oakland fire storm with a loss of $1.5 billion and the Meriden Plaza high-rise fire in Philadelphia with a loss of $325 million.
[5] The 1992 figure includes the Los Angeles Civil Disturbance with a loss of $567 million
[6] The 1993 figure includes Southern California wildfires with a loss of $809 million.
[7] Includes 168 deaths that occurred at the federal office building fire in Oklahoma City, OK.
[8] Does not include the events of 9/11/01, where there were 2,451 civilian deaths, 800 civilian injuries and $33.44 billion in property loss.
[9] Includes 100 fire deaths in the Station Night Club Fire in Rhode Island and 31 deaths in tow nursing home fires in Connecticut and Tennessee.
[10] Does not include the Southern California wildfires with an estimated property damage of $2 billion.
[11] This does not include the California Fire Storm 2007 with an estimated property damage of $1.8 million.
[12] Does not include the California wildfires 2008 with an estimated property damage of $1.4 billion.
Direct property damage figures do not include indirect losses, like business interruption
Inflation adjustment to 2010 dollars is done using the consumer price index.

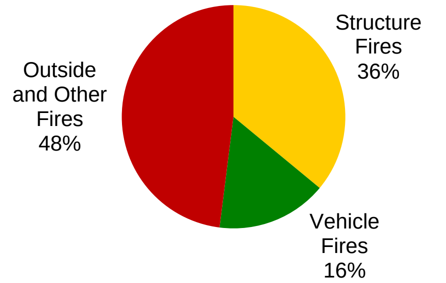
Fires in the United States During 2010

1,331,500 fires were reported in the U.S. during 2010.

- down **1%** from 2009
- **3,120** civilian fire deaths
- **17,720** civilian fire injuries
- **$11.6 billion** in property damage
- **72 firefighter deaths**
  Firefighter deaths are not restricted to fires.

Fires in the United States During 2010



482,000 structure fires occurred in the U.S. during 2010.

- Less than 1% increase from 2009
- **2,755** civilian fire deaths
- **15,420** civilian fire injuries
- **$9.7 billion** in property damage

215,500 vehicle fires occurred in the U.S. during 2010.

- down **1%** from 2009
- **310** civilian fire deaths
- **1,590** civilian fire injuries
- **$1.4 billion** in property damage

634,000 outside and other fires occurred in the U.S. during 2010.

- down **2%** from 2009
- **55** civilian fire deaths
- **710** civilian fire injuries
- **$501 million** in property damage

TRENDS AND PATTERNS OF U.S. FIRE LOSSES IN 2010

Ben Evarts

September 2011

NFPA

National Fire Protection Association
Fire Analysis and Research Division

Abstract

Projections from NFPA's annual fire department experience data reported in Michael Karter's annual reports: *Fire Loss in the United States,* particularly the most recent report, are summarized in this analysis. Reported fires and fire deaths have fallen since 1977, the first year of available data. The drop in population-based rates is even sharper. In 2010, home structure fires accounted for 28% of the reported fires. However, these incidents caused 85% of all civilian fire deaths. Vehicle fires accounted for 16% of the reported fires and 10% of the civilian fire deaths. Roughly half (48%) of the reported fires were outside or other non-structure, non-vehicle fires. In 2010, only 5% of all fire department responses were to fires while 66% were medical aid responses. Since 1980, medical aid calls have more than tripled.

Keywords: fire statistics, fires, fire deaths, fire loss, fire injuries, fire department calls

Acknowledgements

The National Fire Protection Association thanks all the fire departments who participate in the annual NFPA fire experience survey. These firefighters are the original sources of the data that make this analysis possible. Their contributions allow us to estimate the size of the fire problem.

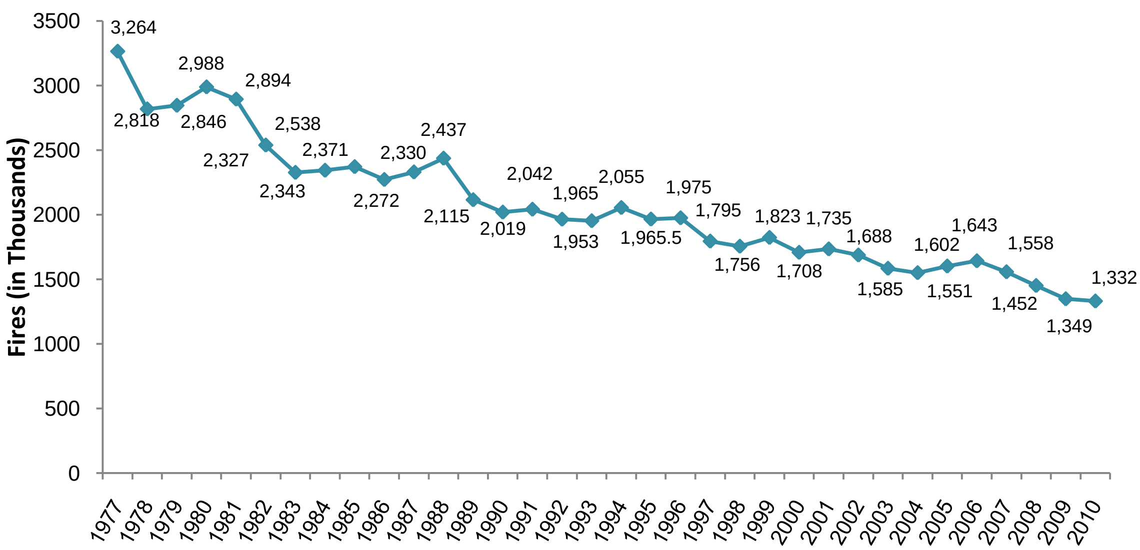
Fire Department Experience with Fires and Other Calls

Except where otherwise noted, the statistics in this report were extracted from the annual reports, Fire Loss in the United States, by Michael J. Karter, Jr. The 2010 report may be downloaded free of charge from www.nfpa.org/osds. Copies can also be obtained from NFPA's One-Stop Data Shop by calling (617) 984-7443 or emailing osds@nfpa.org. These statistics are projections based on the results of NFPA's annual fire department survey. Only fires reported to municipal fire departments are included. Fires handled without fire department involvement, by private fire brigades or by state or federal firefighting authorities are not included in these statistics.

Fire departments responded to 1,331,500 fires in 2010.
U.S. municipal fire departments responded to an estimated 1,331,500 fires in 2010. These fires killed 3,120 civilians (non-firefighters) and caused 17,720 reported civilian fire injuries. Direct property damage was estimated at $11.6 billion dollars. Seventy-two firefighters died while on duty or of injuries incurred while on duty.[1] The 482,000 structure fires accounted for 36% of all reported fires.

Figure 1 and Table 1 show that reported fires fell 59% from 3,264,000 in 1977 to 1,331,500 in 2010, the lowest point since the current data collection system began. Reported fires fell 1% from the previous record low of 1,348,500 in 2009.

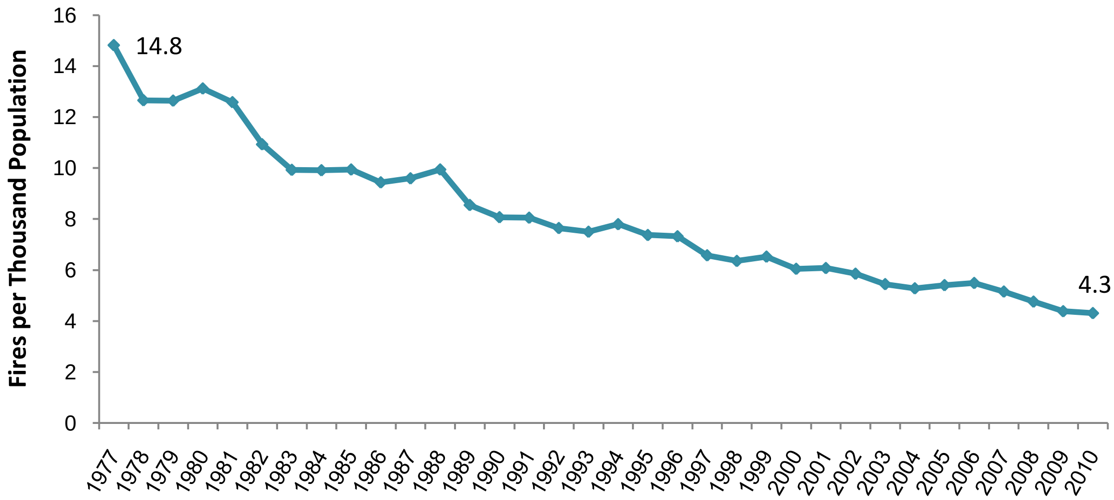
Figure 1. U.S. Fire Incident Trends (in Thousands) 1977-2010



[1] Rita F. Fahy, Paul R. LeBlanc, and Joseph L. Molis, *Firefighter Fatalities in the United States – 2010,* Quincy, MA: National Fire Protection Association, June 2011.

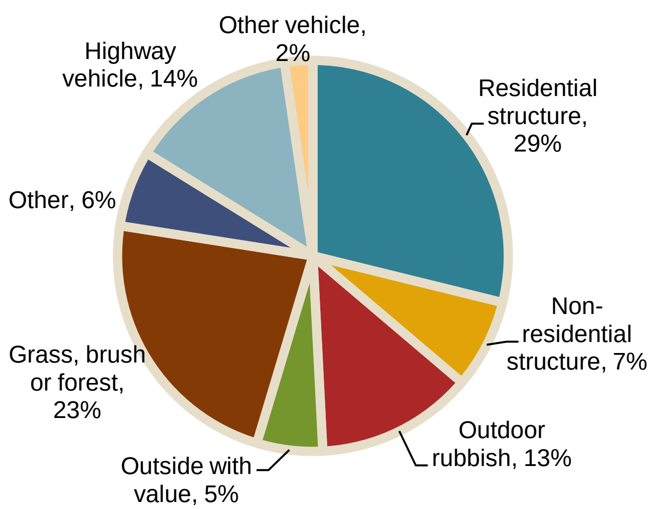
Rates of reported fires per 1,000 population fell even more sharply than total fires over the past three decades.
According to the U.S. Census, the resident population of the US grew 40% from 1977 to 2010. Figure 2 shows that the rate of reported fires per 1,000 population fell 71% from 14.8 in 1977 to 4.3 in 2010.

Figure 2. Trend in Reported Fire Rates per Thousand Population 1977-2010



Structure fires account for one-third of all reported fires but the majority of losses.
Figure 3 shows a breakdown of fires by major property class. The 482,000 reported structure fires caused 2,755 civilian fire deaths, 15,420 civilian fire injuries, and $9.7 billion in direct property damage. Structure fires accounted for 36% of the reported fires, 88% of the civilian fire deaths, 87% of the civilian fire injuries, and 84% of the direct property loss.

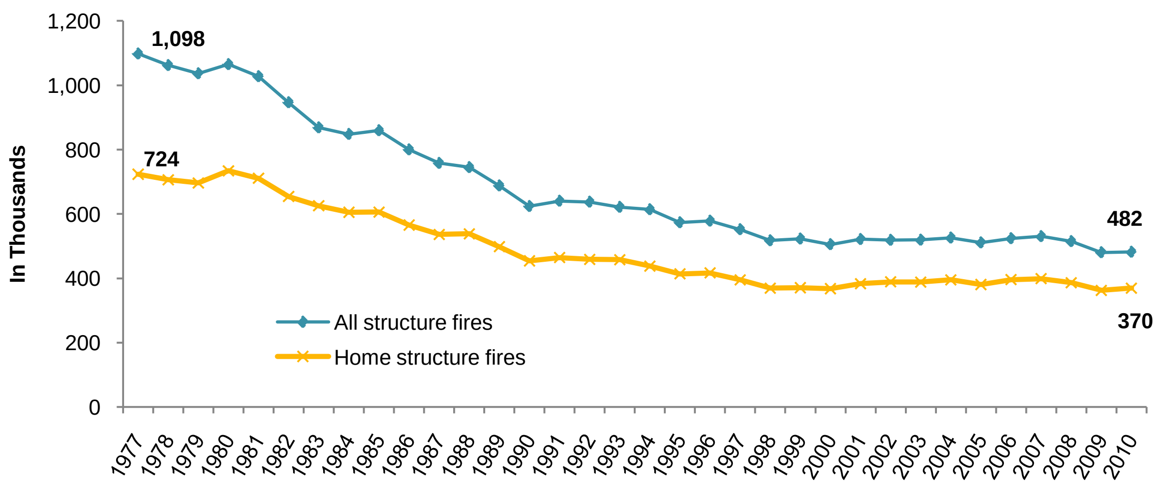
Figure 3. Reported Fire Incidents by Major Property Class 2010



Reported structure fires fell 56% from 1,098,000 in 1977. From 2009 (480,500 structure fires) to 2010, they increased 0.3%. Generally speaking, any fire in or on a structure is considered a structure fire, even if only the contents were involved and there was no structural damage.

Home fires dominate the structure fire problem.
Eighty percent (384,000) of the 482,000 structure fires occurred in residential properties, including homes, hotels, motels, rooming houses and dormitories; 77% (369,500) occurred in homes. (NFPA uses the term "home" to include one- and two-family homes, apartments and manufactured housing.) Home structure fires fell 49% from the 723,500 reported in 1977. They increased 2% from the 362,500 reported in 2009. Figure 4 shows that the trend line for structure fires overall resembles the trend for home fires. However, the percentage of all structure fires that are home fires has risen slowly but steadily through the years, from 66% in 1977 to 77% in 2010.

Figure 4. All Structure Fires and Home Structure Fires by Year 1977-2010



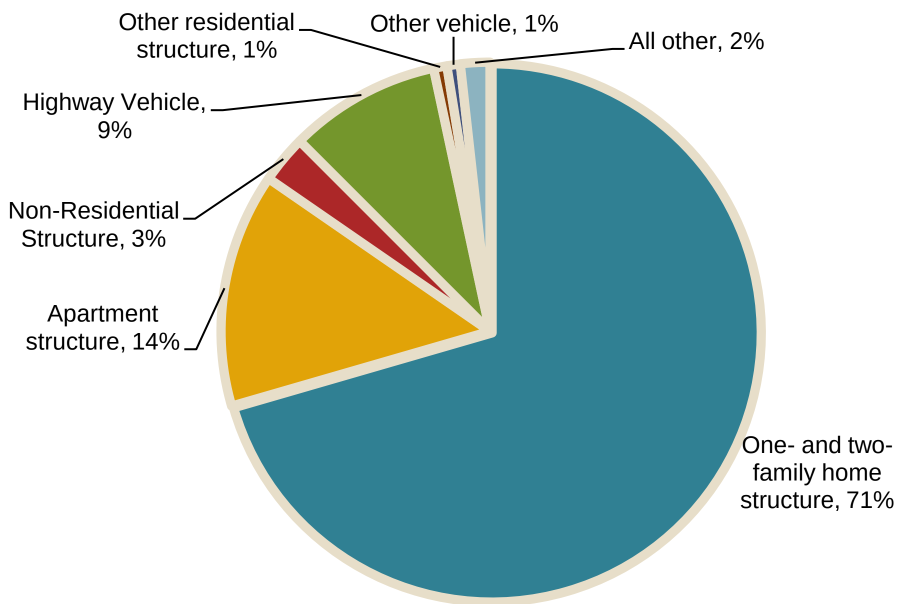
Fifty-eight percent (279,000) of all reported structure fires occurred in one- and two-family homes, including manufactured homes; 19% (90,500) occurred in apartments. NFPA produces a variety of reports about general and specific causes and circumstances of home fires. A general overview, *Home Structure Fires*, by Marty Ahrens, is available at www.nfpa.org/osdsoccupancies. The report is free to all visitors. NFPA members may download more specific reports at no cost.

Home structure fires caused 85% of the civilian fire deaths.
In 2010, 2,640, or 85%, of the 3,120 civilian fire deaths resulted from home structure fires. Only 21% of all reported fires occurred in one- or two-family homes but these fires caused 71% (2,200) of the fire deaths. Apartment fires accounted for only 7% of all reported fires but caused 14% (440) of the deaths. Figures 5-7 show breakdowns of civilian fire deaths, civilian fire injuries, and direct property damage by type of fire and property class. Homes also account for the largest share of civilian fire injuries and direct

property damage. For more information about the people killed or injured in home fires, see NFPA's 2010 report, *Characteristics of Home Fire Victims,* by Jennifer D. Flynn.

Although non-residential structure fires accounted for only 7% of all reported fires, Figure 6 shows that these incidents caused 23% of the direct property damage.

Figure 5. Civilian Fire Deaths by Major Property Class
2010



Vehicle fires caused 10% of fire deaths and civilian fire injuries
During 2010, the 215,500 reported vehicle fires caused an estimated 310 civilian deaths, 1,590 civilian injuries, and $1.4 billion in direct property loss. Vehicle fires accounted for 16% of the reported fires, 10% of the civilian fire deaths and 9% of civilian fire injuries, and 12% of the total direct property damage.

The estimate of 310 vehicle fire deaths was more than three times the 90 civilian deaths reported in non-residential structure fires. Vehicle fires fell 58% from 508,000 in 1977. From 2009 to 2010, highway vehicle[2] fires fell 3%, while non-highway vehicle fires increased 9%**.** Vehicle fires have been hitting consecutive new lows since 2002.

NFPA's 2010 report, *U.S. Vehicle Fire Trends and Patterns,* by Marty Ahrens, provides more information about highway vehicle fires and a breakdown of all vehicle fires by type of vehicle.

---

[2] Highway vehicles include cars, trucks and other vehicles intended for roadway use. Non-highway vehicles include vehicles for water, air or rail transportation, as well as construction, lawn, garden and agricultural vehicles.

Figure 6. Reported Civilian Fire Injuries by Major Property Class 2010

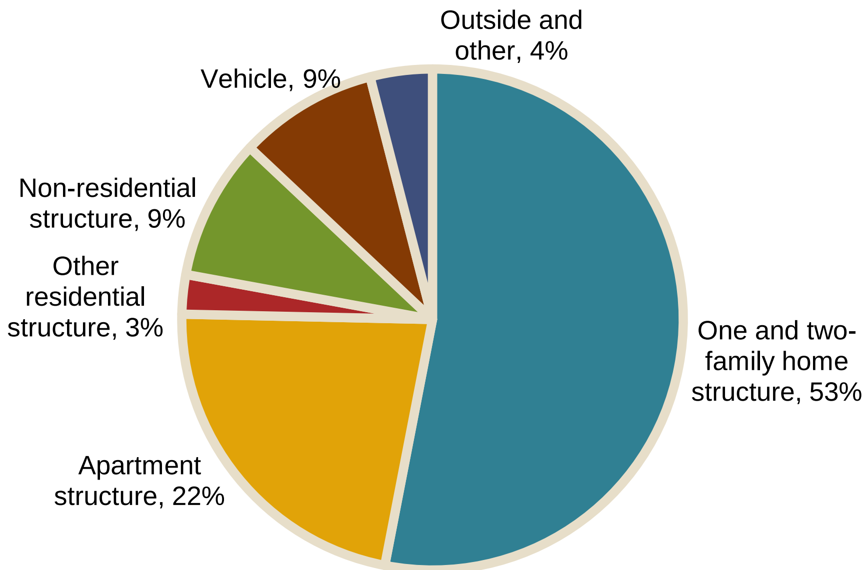


Figure 7. Direct Property Damage by Major Property Class 2010

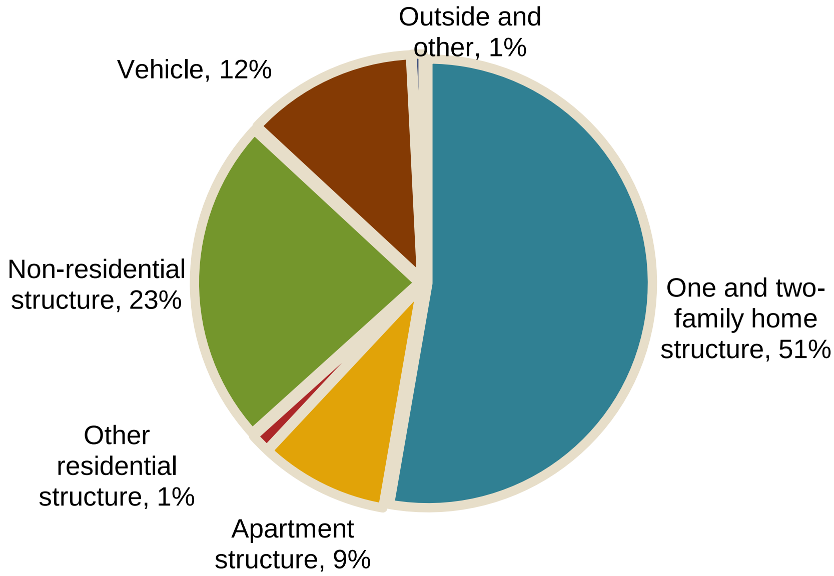

Civilian fire deaths increased slightly from 2009.
The 2010 civilian fire death toll of 3,120 was 4% higher than the 3,010 in 2009 and 58% lower than the 7,395 reported in 1977. Figure 8 shows that the 2010 total civilian fire death toll was the second-lowest since data collection began in 1977. Home structure fire deaths increased 3% from 2,565 in 2008 and 55% from 5,865 in 1977. Because home fire deaths account for such a large share of the total fire deaths, the trend line for both home fire deaths and all home fire deaths tend to be very similar.

Figure 8. All Civilian Fire Deaths and Home Fire Deaths by Year 1977-2010

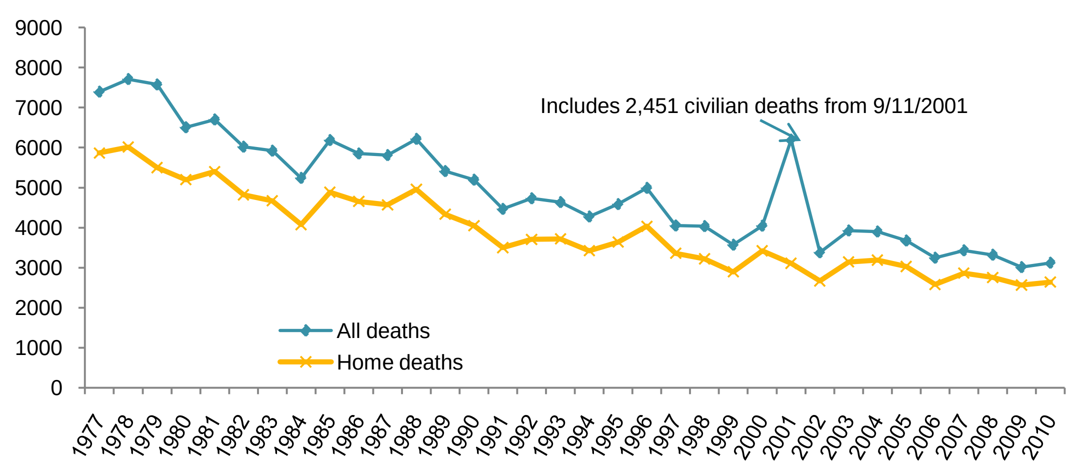

Figure 9 shows that the fire death rate per million population fell 71% from 34.4 in 1977 to 10.1 in 2010. From 2009 to 2010, the rate increased 3%.

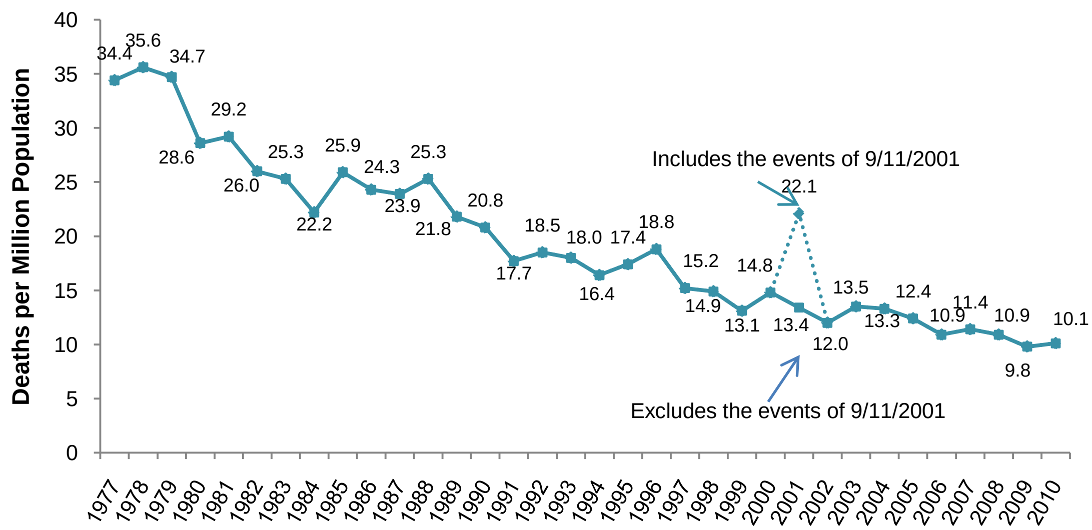
Figure 9. Trend in Civilian Fire Death Rates per Million Population, 1977-2010



The highest fire death rates were seen in the rural South.

In 2010, the South had the highest overall fire death rate (13.0 per million population.) The Midwest had a rate of 12.6, the Northeast had a rate of 6.8 and the West had the lowest death rate of 5.7, much less than the national rate of 10.1.

Nationally, in terms of community size, rural areas with populations under 2,500 had a death rate of 14.6 per million. Southern communities with populations under 2,500 had a civilian fire death rate of 17.4 deaths per million population. The lowest rate was seen in communities with populations between 250,000 and 499,999 (5.8 deaths per million population). Larger Midwestern cities had death rates that were higher than comparably sized cities in other regions.

Half of the reported fires were reported as "outside or other."

Figure 3 showed that 48% (634,000) of the 1,331,500 total reported fires were outside fires or fires other than structure or vehicle fires. These fires caused 55, or 2%, of the civilian deaths and 710, or 4%, of the civilian injuries. These fires fell 2% from the 649,000 reported in 2009.

Outside and other fires reported in 2010 included:

- 72,500 outside fires involving property of value;
- 304,000 brush, grass, or wildland fires; (fires handled by state or federal agencies are not included)
- 173,000 outside rubbish fires; and
- 84,500 other fires including outside spills or leaks with ensuing fires, outside gas or vapor combustion explosions with no after-fire, and unclassified or unknown-type fires.

Although real property damage was lower than in 1977, the average adjusted loss per structure fire was higher.

Figure 10 shows that direct property damage from fire (excluding the events of September 11, 2001), as reported, has generally been rising despite a 26% drop from 2008 to 2010. When adjusted for inflation, however, total fire damages were 31% lower in 2010 than in 1977. Figure 11 shows that the adjusted loss per structure fire was 50% higher in 2010 than it was in 1977.

Figure 10. Direct Property Damage Trend: 1977-2010
(Excluding the Events of September 11, 2001)

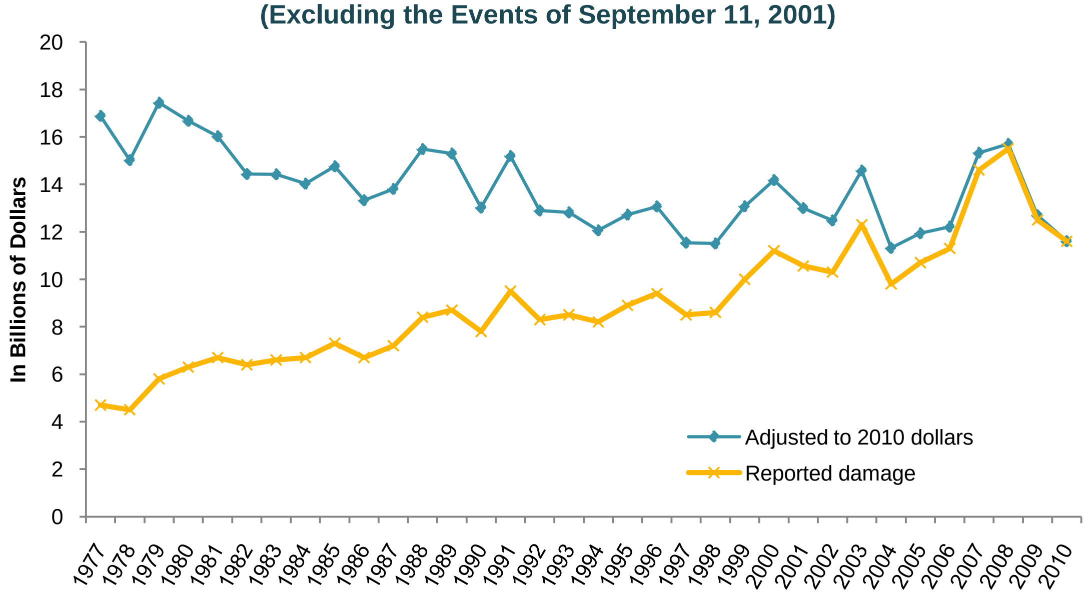


Figure 11. Average Direct Loss per Structure Fire: 1977-2010
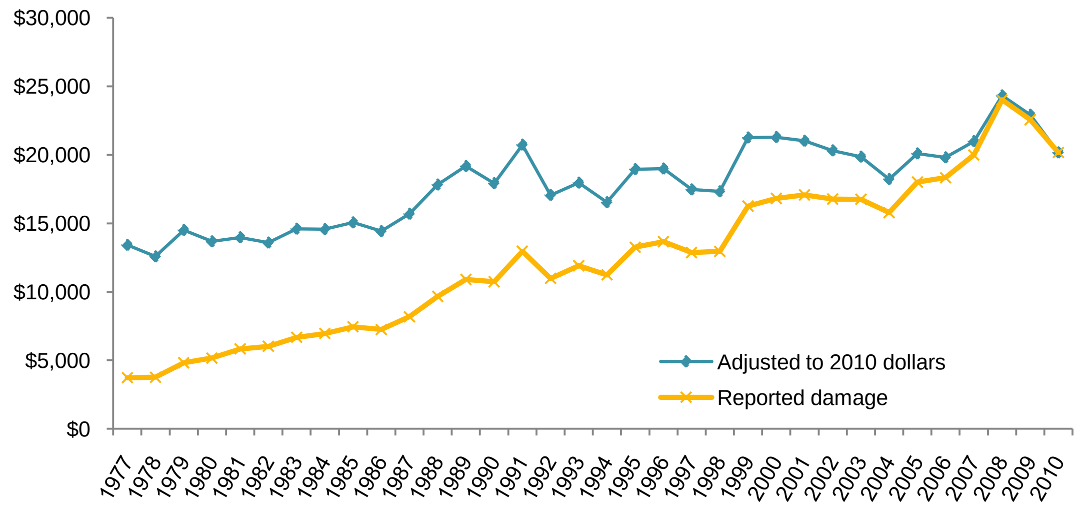
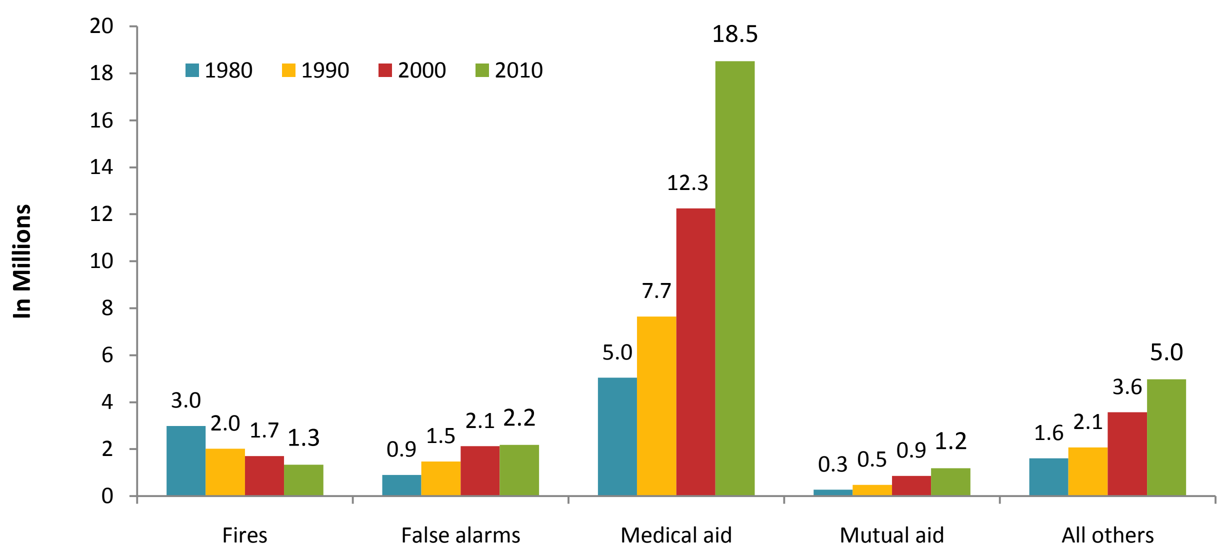
(Excluding the Events of September 11, 2001)



U.S. Fire Department Responses by Incident Type

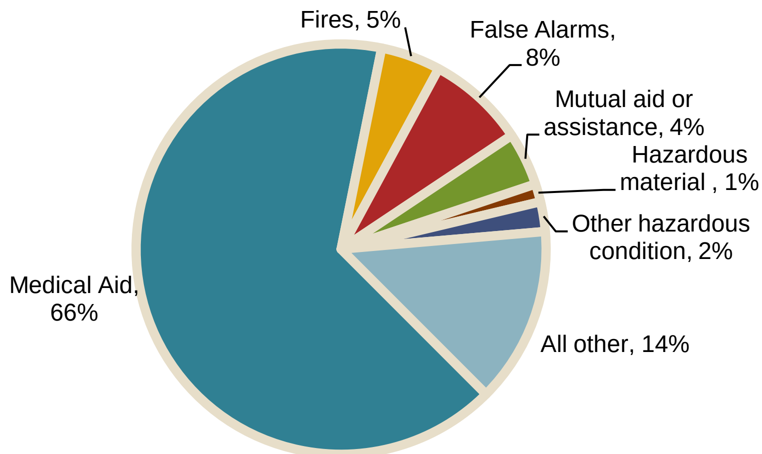
Fire department responses have more than doubled since 1980.
During 2010, U.S. fire departments responded to a total of 28,205,000 calls, 2.6 times the 10,819,000 responses in 1980. Figure 12 shows that medical aid calls have more than tripled since 1980. Mutual aid calls increased more than four times although the share of mutual aid incidents remains small, increasing from 3% in 1980 to 4% in 2010.

Figure 12. Fire Department Responses by Incident Type in 1980, 1990, 2000, and 2010



Two-thirds of fire department responses were medical aid calls.
During 2010, U.S. fire departments responded to 18,522,000 medical aid calls involving emergency medical services (EMS), medical assistance, and non-fire rescue. Figure 13 shows that these incidents accounted for 66% of fire department responses. In 2007-2009, the majority of U.S. fire departments provided at least some EMS services. Forty-four percent of the departments provided EMS only and 15% provided advanced life support (ALS) in addition. The percentage of departments providing any EMS, and more specifically both EMS and ALS, increased with the size of the population protected.[3]

Figure 13. Fire Department Responses by Incident Type 2010



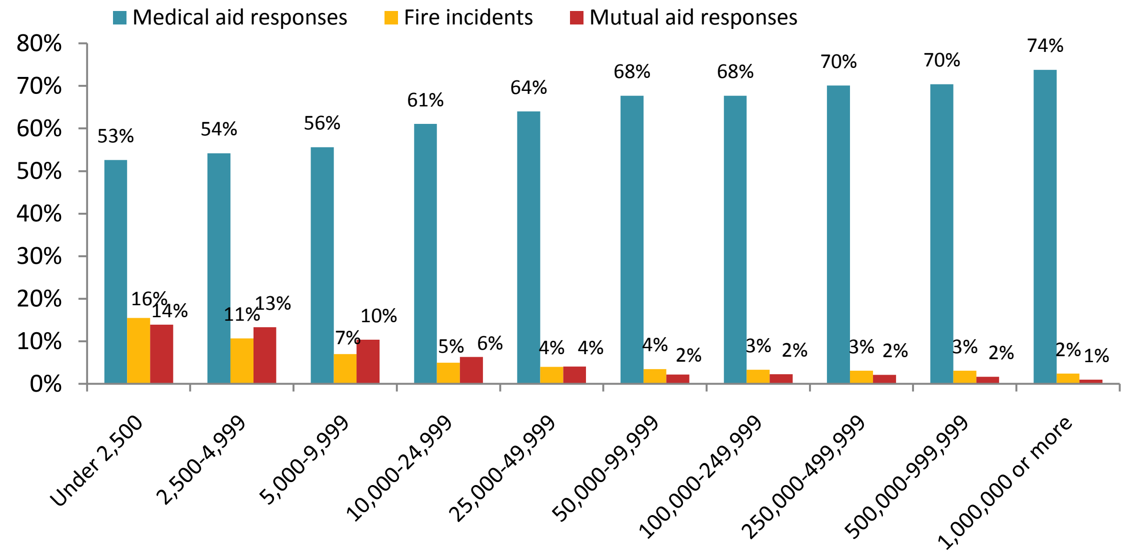
Fires account for a larger percentage of fire department responses in small communities.
Figure 14 shows fire incidents accounted for 16% of the responses by departments protecting populations under 2,500. The percentage of fire calls fell as population grew, dropping to 4% in localities with populations between 25,000 and 49,999 and to 3% for the most populated jurisdictions. These statistics are for 2009 and 2010 combined.

Even in the smallest departments, medical aid accounted for an average of half of all fire department responses. In communities with populations of at least 50,000, at least two-thirds of the responses were for medical aid.

Mutual aid responses also accounted for larger percentages of the incidents in localities with smaller populations. Fourteen percent of the responses in communities with populations under 2,500 were mutual aid. The percentage dropped to 1-2% for departments with populations of 50,000 or more.

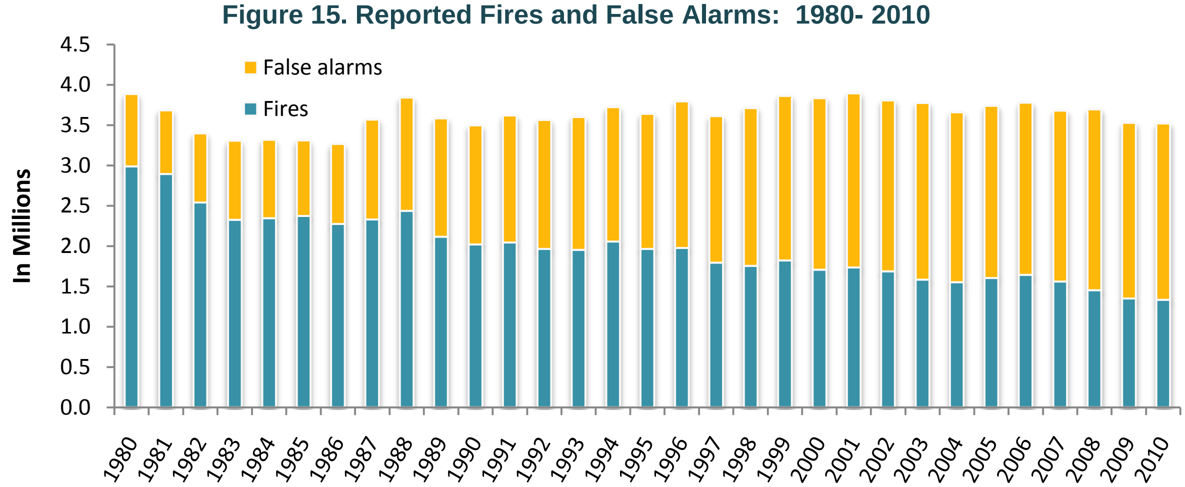
[3] Michael J. Karter, Jr. and Gary P. Stein. *U.S. Fire Department Profile Through 2009,* Quincy, MA: NFPA, 2010, p. 28.

Figure 14. Fire Incidents, Medical Aid, and Mutual Aid Responses as Percentages of Fire Department Responses by Community Size 2009-2010



Sum of false alarms and actual fires has not changed much.
Fires accounted for only 5% of all fire department responses in 2010, compared to 28% in 1980. This decrease is due in large part to the increase in medical aid calls noted earlier. However, the 2010 estimate of 2,187,000 false alarms or false calls was 2.4 times the 896,500 reported in 1980. This increase in false alarms is due to increases in system malfunctions and unintentional calls over the years. Figure 15 shows that the total of reported fires and false alarms has been remarkably stable. Fire departments cannot know the actual situation until they arrive at the scene. In terms of initial response, a false alarm is generally treated as if it were an actual fire. False alarms or false can be related to equipment for smoke, fire or carbon monoxide detection as well as malicious false alarms, bomb scares, and the like.

Figure 15. Reported Fires and False Alarms: 1980- 2010



Other comparative data is found in supporting tables.
Table 1 compares 2010 data with data from 2009, 2000, 1990, and 1980. Most measures show steady improvement over time. Table 2 provides a numeric summary of 2010 fires and associated losses by incident type. Table 3 shows a breakdown of all fire department responses by incident type for 2010 and the percent change from the 2009, 2000, 1990, and 1980. Table 4 shows the percentage breakdown of incident types for the same years as in Table 3.

These statistics were extracted from the annual reports *Fire Loss in the United States,* by Michael J. Karter, Jr. Summaries of these reports are published each year in *NFPA Journal®.* The 2010 report may be downloaded free of charge from www.nfpa.org/osds. Copies of this and other NFPA reports can be obtained from NFPA's One-Stop Data Shop by calling (617) 984-7443 or emailing osds@nfpa.org. Trend tables for all fire department calls, all fires, structure fires, home structure fires, non-home fires, and all fires by incident type are also available on the website or from the One-Stop Data Shop.

NFPA No. MDS10

CATASTROPHIC MULTIPLE-DEATH FIRES IN 2010

Headlines from around the country during 2010 read a lot like these: "Two children survive fire that kills rest of family"; "Adult care home fire kills three"; "Motel fire kills four college students," and so on. If they sound familiar, it's because they could have been written in any previous year. When it comes to these kinds of fires, history truly repeats itself.

According to U*.S. Fire Loss for 2010*, by Michael J. Karter, Jr. of NFPA, firefighters in the United States in 2010 responded to an estimated 1,331,500 fires, 384,000 of which were in residential structures, 98,000 of which were in nonresidential structures, and 849,500 of which were outside of structures. These fires accounted for an estimated 3,120 deaths, 2,665 of which occurred in residential structures, 90 in non-residential structures, and 365 in fires outside of structures.

Twenty-nine of the fires were categorized as catastrophic multiple-death fires, defined here as fires or explosions in homes or apartments that result in five or more fire-related deaths, or as fires or explosions in all other structures, as well as outside of structures such as wildfires and vehicle fires, that claim three or more lives.

These 29 fires accounted for 175 fire deaths, including 30 children under the age of six. They accounted for 0.002 percent of the total estimated fires and 5.6 percent of the total fire deaths for 2010. By comparison, there were 21 catastrophic multiple-death fires in 2009, resulting in 103 deaths, including 26 children under age six.

The largest loss of life in a fire or explosion in the United States in 2010 was a mine explosion. At approximately 3 p.m. on April 5, 2010, a powerful explosion occurred in a coal mine almost 1,000 feet (305 meters) below the surface of the Coal River and mountains in West Virginia, killing 29 miners and seriously injuring at least one other. The Mine Safety and Health Administration (MSHA), the State of West Virginia, the Governor's Independent Investigation Panel, and the United Mine Workers of America conducted a joint investigation, and the Governor's Panel report (see nttc.edu/ubb/) identified several mining system failures that led to, and contributed to, the devastating explosion and fire. "The company's ventilation system did not adequately ventilate the mine," the report found. "As a result, explosive gases were allowed to build up. The company failed to meet federal and state safe principal standards for the application of rock dust. Therefore, coal dust provided the fuel that allowed the explosion to propagate through the mine. Also, water sprays on equipment were not properly maintained and failed to function as they should have. As a result, a small ignition could not be quickly extinguished."

The mine had been closed on April 4, which was Easter Sunday, and re-opened the following day, with 45 workers underground by 7 a.m. During what seemed to be a "normal and typical" day, several problems that arose were reported and being dealt with by the miners before the explosion occurred.

The conclusion reached by the Governor's Panel was that "the ignition point for the blast was the tail of the longwall [the machinery for shearing off coal from the wall]. As the shearer cut into the sandstone mine roof, the resulting sparks ignited a pocket of methane, creating a fireball. The fireball in turn ignited the methane that had accumulated in the gob [an area filled with rock waste] during the Easter weekend and leaked onto the longwall face. The fireball traveled into the tailgate area, where accumulations of coal dust provided fuel for a second, more deadly, force. This dust-fueled blast ricocheted in multiple directions, traveling across the longwall face, into the tailgate entry, and through more than two miles [3 kilometers] of the mine."

According to MSHA, several miners who were near the portals were able to evacuate when the explosion occurred. Those who could not ranged from 20 to 61 years old. It was several days before conditions in the mine were safe enough for the bodies to be removed, and several weeks before the conditions were safe enough for investigators to enter the mine.

Catastrophic Home Structure Fires

Two-thirds, or 65.5 percent, of the catastrophic multiple-death fires occurred in homes. Of the 19 such fires in these properties in 2010, 15 occurred in single-family homes, five of which were manufactured homes; one occurred in a duplex; three occurred in apartment buildings, one of which had six units, one of which had four units, one of which occurred in a building whose size was not reported. This is an increase of nine from 2009. There were 101 deaths in these catastrophic multiple-death home fires in 2010, up from 59 in 2009. Of the 101 fatalities, 28 were children under six, three more than 2009.

The cause or origin was reported for just five of these 19 fires. One fire was deliberately set. One each involved abandoned or improperly disposed of smoking materials, combustibles too close to a heat source, a short circuit in a damaged electric cord, and defective wiring in a ceiling. Fifteen of the fires broke out between the hours of 11 p.m. and 7 a.m., resulting in 81 deaths, including 22 children under age six.

In 14 cases, the cause and origin was listed as undetermined. In some cases, this was due to destruction of the property. In others, fire investigators were unable to determine the cause or eliminate all potential causes. In four incidents, the authorities provided no details.

The largest loss-of-life fire in a home killed seven people, including two children under age six. This arson fire was set on the first floor of a two-story apartment building of unprotected wood-frame construction. There were smoke alarms, which operated and alerted occupants. It was not reported why the occupants were unable to escape.

Four fires killed six people each. The first fire broke out on the second floor of a two-story, six-unit apartment building of unprotected ordinary construction that had a business on the ground level. This fire killed three children under age six. The building had some smoke alarms, but they did not operate for an unreported reason, and others had been removed. The victims were all found on the second story.

The second fire, which killed two children under the age of six, broke out on the first floor of a two-story, single-family home of unprotected wood-frame construction. The cause was not determined, and no information was reported on the presence or absence of smoke alarms. One child was found in a first-floor bedroom, and the other fatalities were found on the second story. Three other people in the house were injured.

The third fire, which killed two children under age six, broke out in a two-story, single-family home of unprotected wood-frame construction. No information was reported on smoke alarms. The fire was electrical in nature and broke out in the first-floor living room.

The fourth fire broke out in a one-story, single-family home, killing two children under age six. No other additional information was reported.

Fourteen fires killed five people each. Seventeen children under age six died in these fires; one fire alone killed four children. These fires occurred in 12 single-family homes, five of which were manufactured homes; one duplex; and one apartment building, with an unreported number of units. In eight of these fires, the buildings had no smoke alarms. In two fires, smoke alarms were present. In one of the two, the victims were under the influence of drugs, and in the second, the family was trying to open doors and windows and became trapped. No information on smoke alarms was reported in four fires.

Catastrophic Non-Home Structure Fires

Eight of the 29 fires occurred in non-home structures. There was one fire each at a chemical manufacturer, a refinery, a care-for-the-aged facility, a motel, a coal mine, a tool shed, a vacant building, and a building under construction. These accounted for 63 of the 175 deaths, compared to 20 in 2009. None of the victims was under age six. In 2009, there were five fires in the non-home category. Part of the large increase in deaths was due to the West Virginia coal mine explosion and fire that killed 29 people, or 46 percent of the deaths in this category.

Seven of the properties were operating to some extent, and the status of the eighth was not reported. The cause—a mechanical breakdown—was reported for just one of the fires.

The largest loss-of-life incident was the coal mine explosion and fire. Eight people were also killed in a vacant warehouse that was being used by the homeless for shelter and sleeping, but no further information was reported.

Seven people were killed at a hydrocarbon refinery when a heat exchanger ruptured, releasing hydrocarbon and naphtha vapors that ignited almost immediately. The heat exchanger, which was almost 40 years old, was being returned to service after maintenance. The rupture occurred at cracks in welds caused by the stresses that heat exchangers experience over years of operation.

Six people died in an explosion and fire in an electric power generation plant that was under construction. The explosion occurred as a large quantity of natural gas was being used in a blowout being conducted to clean out pipes.

Four people died in a two-story motel. No information was released due to ongoing civil suits.

Three people died in each of three incidents. The first, whose cause and origin were not reported, occurred at a one-story chemical manufacturing plant. The second, also of unknown cause, occurred in a one-story, 144-square-foot (13-square-meter) tool shed. The third fire broke out in the living room of a one-story, 2,100-squarefoot (195-square-meter) care-for-the-aged facility. The cause of this fire was undetermined and is still under investigation.

Catastrophic Non-Structure Fires

There were two non-structure incidents, one in a passenger vehicle crash and fire, and the other in a gas distribution system. The incidents killed 11 people, two under age six. This is four fewer incidents than occurred in this category in 2009 and 10 fewer deaths. Vehicle crashes and fires are included in this study if the fire in the vehicle caused the crash or if the local coroner or medical examiner confirms that the victims died of thermal injuries or inhalation of products of combustion, rather than from impact injuries.

One of the fires killed eight people. An explosion and fire erupted in a natural gas distribution system when a 30-inch (76.2-centimeter) gas transmission pipeline developed a leak under a street in a residential area. An unknown source ignited the explosion of approximately 47 million cubic feet (1,331,000 cubic meters) of natural gas. The fire destroyed 38 homes and damaged 63 others. The victims were at various locations in the area.

Three members of one family, including two children under age six, died in a multi-vehicle crash and fire on an interstate highway when a tractor trailer struck their passenger car from behind, pushing it into another tractor trailer. Fuel from a breach in the car's fuel system, as well as fuel from a saddle tank on the tractor trailer that hit the car, was ignited by heat from the tractor's engine. Another family member in the car died of blunt force trauma.

The Role of Smoke Detection and Suppression Equipment

In 12 of the 19 home fires, information was available on automatic smoke detection equipment. Four were equipped with smoke alarms. Two systems operated, one didn't, and it was not known if the fourth did or not. The reason the occupants failed to evacuate in one home that had operational smoke alarms was not reported. The other fire in which operational smoke alarms were present occurred in a four-unit apartment building where the fire department reported the exits were blocked by smoke and flames. Eight structures had no smoke alarms at all. In these fires, 40 people died, including three children under the age of six.

Information on detection equipment was reported for only one of the eight non-home structures. The care-for-the-aged facility was equipped with smoke alarms that operated and alerted the residents. The fire department reported that the age of the victims was a factor in preventing escape.

Smoke alarms have been proven effective in reducing the risk of death in home fires. The most effective arrangement is interconnected, multiple-station smoke alarms that are supplied by hard-wired AC power with a battery backup. These should be located outside each sleeping area, on each level, and in each bedroom. Homeowners should routinely test smoke alarms according to manufacturers' recommendations; NFPA recommends testing home smoke alarms at least monthly. Batteries should also be replaced according to manufacturer's recommendations; conventional batteries should be replaced at least yearly. If an alarm "chirps," a warning that the battery is low, the battery should be replaced right away. All smoke alarms, including alarms that use 10-year batteries and hard-wired alarms, should be replaced when they are 10 years old or sooner if they do not respond properly when tested.

Smoke alarms are only effective if occupants leave the building when they sound. Children should be familiar with the sound of a properly operating smoke alarm and follow a practiced escape plan, one that emphasizes two exits from any location, as well as a designated meeting place once they have evacuated the structure. Exit drills in the home are part of many school curricula. Practicing the plan helps families determine whether children and others readily waken to the sound of a smoke alarm if it sounds during night, and that, along with assistance for family members who require it, can be factored into the plan. Practicing escape plans, as well as basic fire prevention principles, might have prevented many of the fires and deaths included in this report.

No suppression equipment was reported to have been present in any of the fires. This is unfortunate, because sprinklers are proven lifesaving systems across many different kinds of properties, including homes. The risk of dying in a reported fire in your home decreases by about 80 percent when sprinklers are present, and sprinklers reduce the average property loss by 71 percent per fire. More information about home fire sprinklers is available at www.firesprinklerinitiative.org.

Where We Get Our Data

NFPA obtains its data by reviewing national and local news media, including fire service publications. A news clipping service reads all daily U.S. newspapers and notifies the NFPA Fire Analysis and Research Division of catastrophic fires. Once an incident has been identified, we request information from the local fire department or the agency having jurisdiction.

NFPA's annual survey of U.S. fire experience and mailings to state fire marshals are additional data sources, although not principal ones. We also contact federal agencies that have participated in the investigation of such fires. The diversity and redundancy of these sources enable us to collect the most complete data available on catastrophic fires in the United States. We understand that, in many cases, a department cannot release information due to ongoing litigation. In other cases, departments have been unable to determine the information we request.

Stephen G. Badger*, a fire data assistant with NFPA's Fire Analysis and Research Division, is retired from the Quincy, Massachusetts, Fire Department.*

TABLE 1. HOME STRUCTURE FIRES

Illinois

Date, Time of Alarm, Number of Deaths
February, 6:30 a.m., 7 (2 under age 6)
Number of Stories, Occupancy Type, Construction Type
This was an occupied two-story, four-unit apartment building that covered 2,250 square feet (210 square meters) and was of unprotected wood-frame construction.
Smoke Alarm and Other Protection Devices
Smoke alarms were present and alerted the occupants. The fire department reported the occupants were unable to escape because exits were blocked by smoke and flames. There was no automatic suppression equipment.
Fire Origin and Path
This fire was set on the first story using available combustibles. No additional information was reported.
Contributing Factors and Victim Locations
Three firefighters were also injured. No information was reported on the victim's locations. An arrest has been made in this case.

Minnesota

Date, Time of Alarm, Number of Deaths
April, 5:59 a.m., 6 (3 under age 6)
Number of Stories, Occupancy Type, Construction Type
The two-story, six-unit apartment building with a pub on the first floor covered7,200 square feet (670 square meters). It was of unprotected, ordinary construction. The second-story apartments were occupied, and the pub was closed.
Smoke Alarm and Other Protection Devices
Smoke alarms, though present, did not operate for unreported reasons, and some had been removed. There was no automatic suppression equipment.
Fire Origin and Path
The only information reported was that the fire began on the second story.
Contributing Factors and Victim Locations
The victims were all located on the second story. An additional five people, as well as four firefighters, were injured.

New York

Date, Time of Alarm, Number of Deaths
June, 6:51 a.m., 6 (2 under age 6)
Number of Stories, Occupancy Type, Construction Type
This was a two-story, single-family home of unprotected wood-frame construction.
The ground floor area was not reported.
Smoke Alarm and Other Protection Devices
No information was reported on smoke alarms. There was no automatic suppression equipment.

Fire Origin and Path
The only information reported was that the fire started on the first floor.
Contributing Factors and Victim Locations
Five of the victims were located on the second story, and one child was in a bedroom on the first story. In addition, three other people were injured.

Oklahoma

Date, Time of Alarm, Number of Deaths
August, 5:13 a.m., 6 (2 under age 6)
Number of Stories, Occupancy Type, Construction Type
This was a one-story, single-family home of unprotected ordinary construction.
Smoke Alarm and Other Protection Devices
No information was reported.
Fire Origin and Path
No information was reported.
Contributing Factors and Victim Locations
No information was reported.

Maryland

Date, Time of Alarm, Number of Deaths
December, 4:35 a.m., 6 (2 under age 6)
Number of Stories, Occupancy Type, Construction Type
This was a two-story, single-family row house of unprotected wood-frame construction that covered approximately 1,000 square feet (93 square meters).
Smoke Alarm and Other Protection Devices
No information was reported on smoke detection equipment. There was no automatic suppression equipment.
Fire Origin and Path
This fire broke out in a first-story living room and was electrical in nature. No additional details were reported.
Contributing Factors and Victim Locations
No information was reported.

Missouri

Date, Time of Alarm, Number of Deaths
January, 4:59 a.m., 5 (1 under age 6)
Number of Stories, Occupancy Type, Construction Type
This was a one-story, single-family home of unprotected wood-frame construction. The ground floor area was not reported. There were seven occupants in the home at the time.
Smoke Alarm and Other Protection Devices
There were no smoke alarms or suppression equipment present.
Fire Origin and Path
The fire broke out in the finished basement near a couch. The cause was undetermined.

Contributing Factors and Victim Locations
The five victims were found in a bathroom in the basement. Two other people were injured but escaped from the first floor. Firefighters responding to the scene were slowed due to icy roads and snow drifts.

California

Date, Time of Alarm, Number of Deaths
January, 5:15 a.m., 5
Number of Stories, Occupancy Type, Construction Type
This single-family, single-wide manufactured home of unprotected wood-frame construction covered 648 square feet (60 square meters) and had an addition that contained a bedroom.
Smoke Alarm and Other Protection Devices
Neither smoke alarms nor suppression equipment were present.
Fire Origin and Path
The fire started in the bedroom in home's addition. The cause was undetermined.
Contributing Factors and Victim Locations
These were not reported.

Tennessee

Date, Time of Alarm, Number of Deaths
January, 6:46 a.m., 5 (1 under age 6)
Number of Stories, Occupancy Type, Construction Type
This two-story duplex of unprotected wood-frame construction covered 1,690 square feet (157 square meters). The unit of origin was occupied by seven people at the time of the fire.
Smoke Alarm and Other Protection Devices
Neither smoke alarms nor suppression equipment were present.
Fire Origin and Path
The fire broke out in a first-floor bedroom, but the cause was undetermined.
Contributing Factors and Victim Locations
No information was reported on victim location or fire spread. An eight-year-old who escaped on her own was taken to a hospital, as was another child who was in critical condition.

New York

Date, Time of Alarm, Number of Deaths
January, 2:31 a.m., 5
Number of Stories, Occupancy Type, Construction Type
This three-story apartment building of unprotected ordinary construction had businesses on the ground level and covered 4,000 square feet (372 square meters). The number of apartments in the building was not reported.
Smoke Alarm and Other Protection Devices
There were no smoke alarms or suppression equipment.
Fire Origin and Path
The fire broke in a second-story apartment. No additional information was reported.

Contributing Factors and Victim Locations
Three additional people and 14 firefighters were injured.

Arkansas

Date, Time of Alarm, Number of Deaths
February, 3:57 a.m., 5 (1 under age 6)
Number of Stories, Occupancy Type, Construction Type
This was a one-story, single-family home of unprotected wood-frame construction that covered 1,200 square feet (111.5 square meters)
Smoke Alarm and Other Protection Devices
Neither detection nor automatic suppression equipment were present.
Fire Origin and Path
The fire was caused by a short circuit in a lamp’s electrical cord, which had been damaged by a sofa resting on it. The short circuit ignited the sofa, and the fire spread throughout the house.
Contributing Factors and Victim Locations
A man and a four-year-old girl were found in a bedroom. A woman was found in a bathroom off a bedroom. Two more children were found in a hallway at the entrance to a bathroom.

Rhode Island

Date, Time of Alarm, Number of Deaths
February, 12:10 pm, 5 (1 under age 6)
Number of Stories, Occupancy Type, Construction Type
This two-story, single-family home of unprotected woodframe construction covered 1,224 square feet (114 square meters).
Smoke Alarm and Other Protection Devices
There were smoke alarms, but it is not known if they operated. There was no automatic suppression equipment.
Fire Origin and Path
Defective wiring in a first-story ceiling ignited wooden structure supports. Fire damage was confined to the ceiling/floor assembly and a second-floor bedroom.
Contributing Factors and Victim Locations
Two victims were found in each of two bedrooms on the second floor. The fifth victim was also found on the second floor, but the location was not reported. All four adults had drugs in their systems.

Alabama

Date, Time of Alarm, Number of Deaths
March, 12:15 a.m., 5 (1 under age 6)
Number of Stories, Occupancy Type, Construction Type
The ground floor area of the single-family manufactured home of unprotected wood-frame construction was not reported.
Smoke Alarm and Other Protection Devices
No information was reported.

Fire Origin and Path
No information was reported.
Contributing Factors and Victim Locations
No information was reported.

Kentucky
Date, Time of Alarm, Number of Deaths
April, 2 a.m., 5 (3 under age 6)
Number of Stories, Occupancy Type, Construction Type
The ground-floor area of the single-family manufactured home of unprotected wood-frame construction was not reported.
Smoke Alarm and Other Protection Devices
No information was reported.
Fire Origin and Path
No information was reported.
Contributing Factors and Victim Locations
Seven people were also injured.

Idaho
Date, Time of Alarm, Number of Deaths
June, 4:02 a.m., 5 (1 under age 6)
Number of Stories, Occupancy Type, Construction Type
This single-family manufactured home of unprotected wood-frame construction covered 600 square feet (55.7 square meters). It was occupied by a family of two adults and three children.
Smoke Alarm and Other Protection Devices
Neither smoke alarms nor automatic suppression equipment were present.
Fire Origin and Path
The fire began on the porch when a can of discarded cigarette butts ignited the wooden decking. The fire spread into the house and to two vehicles parked outside.
Contributing Factors and Victim Locations
All five victims were found in a rear bedroom.

Washington
Date, Time of Alarm, Number of Deaths
June, 10:04 a.m., 5 (1 under age 6)
Number of Stories, Occupancy Type, Construction Type
This two-story townhouse of unprotected woodframe construction covered 476 square feet (44 square meters). It was one unit of a three-unit building that covered 1,800 square feet (167 square meters).
Smoke Alarm and Other Protection Devices
Two smoke alarms were present. An alarm on the second floor activated. There was no suppression equipment.

Fire Origin and Path

The fire broke out in a first-floor living room closet when the closet's hot light bulb ignited one end of a foam rubber mattress that had been pushed inside. Residents pulled the mattress from the closet and left it in the living room as they opened doors and windows to help silence the alarm, but the cross ventilation caused the smoldering mattress to flare up and ignite nearby furniture. The fire then spread up the stairwell to the second story.

Contributing Factors and Victim Locations

The fire blocked the victims' means of egress. All five were found in a second-floor bathroom; three were in the bathtub. Another person was injured.

Tennessee

Date, Time of Alarm, Number of Deaths

September, 2:38 a.m., 5 (2 under age 6)

Number of Stories, Occupancy Type, Construction Type

This single-family, double-wide manufactured home covered 1,404 square feet (130 square meters).

Smoke Alarm and Other Protection Devices

Neither smoke alarms nor automatic suppression equipment were present.

Fire Origin and Path

The cause and origin of this fire is undetermined.

Contributing Factors and Victim Locations

When the fire department arrived, the house was 50 percent involved in fire. Firefighters made three attempts to rescue the trapped occupants, but they were forced into a defensive attack as conditions worsened. One other person was injured.

Ohio

Date, Time of Alarm, Number of Deaths

October, 2:12 a.m., 5 (1 under age 6)

Number of Stories, Occupancy Type, Construction Type

This two-story, eight-bedroom, single-family home of unprotected wood-frame construction covered 5,720 square feet (531 square meters).

Smoke Alarm and Other Protection Devices

Information on detection equipment was undetermined due to the destruction of the house. Investigators found no automatic suppression equipment.

Fire Origin and Path

The fire began in the living room when an electric space heater ignited an unknown wooden item. How the item was ignited was not reported. The fire spread throughout the first story and up the stairway to the second floor, destroying the home.

Contributing Factors and Victim Locations

All the victims were located in four of the bedrooms on the second story, but they were found on the first floor after the house burned to the ground. A second-story balcony had no ladder or stairs allowing for egress, and the fire blocked the main means of egress. Seven civilians and a firefighter were injured.

Pennsylvania

Date, Time of Alarm, Number of Deaths
October, 7:30 p.m., 5 (4 under age 6)
Number of Stories, Occupancy Type, Construction Type
This was a three-story, single-family row house of unprotected wood-frame construction. The ground floor area was not reported.
Smoke Alarm and Other Protection Devices
No information was reported.
Fire Origin and Path
No information was reported.
Contributing Factors and Victim Locations
No information was reported.

Florida

Date, Time of Alarm, Number of Deaths
November, 10:35 p.m., 5
Number of Stories, Occupancy Type, Construction Type
This one-story, single-family home covered 1,434 square feet (133 square meters) and was of unprotected wood-frame construction.
Smoke Alarm and Other Protection Devices
Neither smoke alarms nor suppression equipment were present.
Fire Origin and Path
No information was reported on the cause and origin of the fire.
Contributing Factors and Victim Locations
Two of the victims were found in bedrooms. No information was reported as to the locations of the other three. An additional person received life-threatening smoke inhalation and burn injuries.

TABLE 2. NON-HOME STRUCTURE FIRES

West Virginia
Date, Time of Alarm, Number of Deaths
April, 3 p.m., 29
Number of Stories, Occupancy Type, Construction Type, Operating Status
This explosion and fire occurred in a coal mine consisting of approximately 2.5 miles (4 kilometers) of tunnels approximately 1,000 feet (395 meters) under the surface. It was at full operation at the time.
Detection Systems and Suppression Systems
No information reported.
Fire Origin and Path
A low volume of methane and/or methane from natural gas was the fuel for the initial ignition of the explosion. Friction or sparks from a worn bit on a mining machine contributed to the ignition. This explosion initiated a secondary coal dust explosion.
Contributing Factors and Victim Locations
Water sprayers that cooled the wall and the mining machine as it sheared away coal were missing, allowing a spark or heat from friction to ignite the gasses present. The mine's ventilation and air moving systems were not working correctly, so methane gas and coal dust accumulated over the weekend. More information can be found at the Mine Safety and Health Administration website at msha.gov. The report from the Governor's Independent Investigation Panel is available at nttc.edu/ubb/. Investigations are ongoing.

Louisiana
Date, Time of Alarm, Number of Deaths
December, 1:30 a.m., 8
Number of Stories, Occupancy Type, Construction Type, Operating Status
This one-and-a-half-story vacant warehouse of unprotected noncombustible construction was being used by homeless men and women for shelter. The floor area was not reported.
Detection Systems and Suppression Systems
No information was reported.
Fire Origin and Path
No information was reported.
Contributing Factors and Victim Locations
No information was reported.

Washington
Date, Time of Alarm, Number of Deaths
April, 12:40 a.m., 7
Number of Stories, Occupancy Type, Construction Type, Operating Status
This hydrocarbon refinery was of unprotected noncombustible construction. The height and floor area were not reported. It was operating at the time of the fire.
Detection Systems and Suppression Systems
No information was reported.

Fire Origin and Path
A heat exchanger ruptured, releasing hydrocarbon and naphtha vapors that were almost immediately ignited. The heat exchanger, which was almost 40 years old, was being brought back in service after being down for maintenance and cleaning. The leak or leaks were found in cracks in welds. During operations, heat exchangers go through many changes in temperature and pressure, causing such cracks. For further information on the investigations, visit the Washington Department of Labor and Industry at lni.wa.gov/ and the Chemical Safety Board at csb.gov/.
Contributing Factors and Victim Locations
No information was reported.

Connecticut
Date, Time of Alarm, Number of Deaths
February, 11:15 a.m., 6
Number of Stories, Occupancy Type, Construction Type, Operating Status
This was an explosion at a power generating plant construction site. No information on the construction, ground floor area, or height of the plant was reported.
Detection Systems and Suppression Systems
No information was reported.
Fire Origin and Path
The explosion occurred when a large quantity of natural gas was being used in a blowout conducted to clean out pipes. It is not known what the ignition point was.

Contributing Factors and Victim Locations
Fifteen natural gas blows were completed within four hours of the explosion from an open-ended 20-foot (6-meter) pipe located between two large structures known as heat recovery steam generators. It is probable that the proximity of the buildings and the location of the vent pipe affected the dispersion of the natural gas. Up to 50 other workers were injured. Additional information can be found at the Chemical Safety Board at csb.gov/. At least five of the fatalities were located in the power generation building and were involved in the gas blow. The location of the other victim was not reported.

Alabama
Date, Time of Alarm, Number of Deaths
January, 8 p.m., 4
Number of Stories, Occupancy Type, Construction Type, Operating Status
This was a two-story motel of unprotected wood-frame construction. No further information was reported.
Detection Systems and Suppression Systems
No information was released due to ongoing civil suits.
Fire Origin and Path
No information was released due to ongoing civil suits.
Contributing Factors and Victim Locations
No information was released due to ongoing civil suits.

California

Date, Time of Alarm, Number of Deaths
September, 12:51 p.m., 3
Number of Stories, Occupancy Type, Construction Type, Operating Status
This was a one-story, 144-square-foot (13-square-meter) tool shed of unprotected wood-frame construction.
Detection Systems and Suppression Systems
No information was reported.
Fire Origin and Path
No information was reported.
Contributing Factors and Victim Locations
No information was reported on the victims' locations or what they were doing at the time. One firefighter was injured during the fire.

Michigan

Date, Time of Alarm, Number of Deaths
October, 1:57 a.m., 3
Number of Stories, Occupancy Type, Construction Type, Operating Status
This one-story adult care home covered 2,100 square feet (195 square meters) and was of unprotected wood-frame construction. The facility was occupied at the time of the fire.
Detection Systems and Suppression Systems
There were smoke alarms in each room. The system operated and alerted the occupants. There was no automatic suppression equipment.
Fire Origin and Path
The cause of the fire, which broke out in the first-story living room, is undetermined and still under investigation.
Contributing Factors and Victim Locations
The age of the victims was reported as a factor in preventing their escape. An additional four people were injured.

West Virginia

Date, Time of Alarm, Number of Deaths
December, 1:23 p.m., 3
Number of Stories, Occupancy Type, Construction Type, Operating Status
This was a one-story chemical manufacturing plant of unprotected noncombustible construction.
Detection Systems and Suppression Systems
No information was reported.
Fire Origin and Path
No information was reported.
Contributing Factors and Victim Locations
No information was reported.

TABLE 3. NON-STRUCTURAL FIRES

California

Date, Time of Alarm, Number of Deaths
September, 6:12 p.m., 8
Setting
This was a 30-inch (76-centimeter) natural gas transmission pipeline that ran under the roadway in a residential neighborhood.
Climate
Winds were at 20 miles (32 kilometers) per hour, the temperature was 65° F (18°C), and humidity was at 58 percent.
Fire Origin and Path
A rupture of the gas transmission pipeline released over 47 million cubic feet (1,330,892 cubic meters) of natural gas. The release was ignited by an undetermined source and created a crater approximately 76 feet (23 meters) by 26 feet (8 meters), with a fireball reported to be 200 feet (61 meters) high.
Factors Hindering Occupant Escape
The explosion and ensuing fire destroyed 38 homes and damaged 63 others. It also damaged or destroyed 74 vehicles. Fifty people were injured. An investigation is ongoing by the National Transportation Safety Board (ntsb.gov/).

California

Date, Time of Alarm, Number of Deaths
February, 12:35 p.m., 3 deaths (2 under age 6)
Setting
This crash, which occurred on an interstate highway, involved a passenger car that was struck from behind and became partially wedged under another tractor trailer.
Climate
It was not reported.
Fire Origin and Path
The fire broke out when fuel spilled from a breach in the car's fuel system and fuel from a damaged saddle tank on the truck that struck the car was ignited by the truck's engine.
Factors Hindering Occupant Escape
A passenger vehicle with four occupants became wedged under a tractor trailer truck after it was struck from behind by another tractor trailer truck. The four occupants were trapped in the car when it caught fire. One of the four died of blunt force trauma injuries, and the other three died of burns or smoke inhalation. Passersby tried to rescue the victims, but they were driven back by the heat and flames.

California

Date, Time of Alarm, Number of Deaths

September, 12:51 p.m., 3

Number of Stories, Occupancy Type, Construction Type, Operating Status

This was a one-story, 144-square-foot (13-square-meter) tool shed of unprotected wood-frame construction.

Detection Systems and Suppression Systems

No information was reported.

Fire Origin and Path

No information was reported.

Contributing Factors and Victim Locations

No information was reported on the victims' locations or what they were doing at the time. One firefighter was injured during the fire.

Michigan

Date, Time of Alarm, Number of Deaths

October, 1:57 a.m., 3

Number of Stories, Occupancy Type, Construction Type, Operating Status

This one-story adult care home covered 2,100 square feet (195 square meters) and was of unprotected wood-frame construction. The facility was occupied at the time of the fire.

Detection Systems and Suppression Systems

There were smoke alarms in each room. The system operated and alerted the occupants. There was no automatic suppression equipment.

Fire Origin and Path

The cause of the fire, which broke out in the first-story living room, is undetermined and still under investigation.

Contributing Factors and Victim Locations

The age of the victims was reported as a factor in preventing their escape. An additional four people were injured.

West Virginia

Date, Time of Alarm, Number of Deaths

December, 1:23 p.m., 3

Number of Stories, Occupancy Type, Construction Type, Operating Status

This was a one-story chemical manufacturing plant of unprotected noncombustible construction.

Detection Systems and Suppression Systems

No information was reported.

Fire Origin and Path

No information was reported.

Contributing Factors and Victim Locations

No information was reported.

LARGE-LOSS FIRES IN THE UNITED STATES-2009

Stephen G. Badger
Fire Analysis and Research Division
National Fire Protection Association

November 2010

National Fire Protection Association, 1 Batterymarch Park, Quincy, MA 02169-7471

Acknowledgements
NFPA thanks the U.S. fire service for its contributions of data, without which this report would not be possible. In many cases, the fire departments were unable to contribute complete details to NFPA on these larger-loss incidents because legal action is pending or ongoing, or they are unable to determine many pieces of information we need to make our study as complete as possible. The author wishes to thank Norma Candeloro for providing the support this study requires.

For more information about the National Fire Protection Association, visit www.nfpa.org or call 617-770-3000. To learn more about the One-Stop Data Shop go to www.nfpa.org/osds or call 617-984-7443.

NFPA No. LLS09

Introduction

Each year, the NFPA reports on large-loss fires and explosions that occurred in the United States the year before. Such fires and explosions are defined as any event that results in property damage of at least $10 million. In 2009, according to Michael J. Karter Jr., in "U.S. Fire Loss For 2009," in the September/October issue of *NFPA Journal*, U.S. fire departments responded to an estimated 1,348,500 fires—480,500 structure fires and 868,000 non-structure fires—which caused an estimated loss of $12.5 billion. Many of these fires were small or resulted in little or no reported property damage. However, 24 of them resulted in losses of $10 million or more each, for a total of roughly $940 million in direct property losses. Although these fires accounted for only 0.002 percent of the estimated number of fires in 2009, they accounted for 7.5 percent of the total estimated dollar loss.

NFPA tracks and tries to verify loss information for all large-loss fires reported in the media or by other sources. These 24 large-loss fires are those fires for which an official dollar loss was obtained.

The number of large-loss fires annually has ranged over the past 10 years from 16 to 45, with an average of approximately 25 fires per year. When adjusted for inflation to 2000 dollars, the number of fires in 2009 that could be categorized as large-loss fires—that is, fires resulting in a loss of $10 million in 2000 dollars—drops to 17, with an adjusted loss of $693 million in 2000 dollars (Figures 1 and 2).

In 2009, 14 fires resulted in more than $20 million each in property damage. These costliest 14 fires, which include 10 structure fires, 3 wildland fires, and 1 vehicle fire, resulted in a combined property loss of $813.2 million, which represents 86.5 percent of the total loss in large-loss fires and 6.5 percent of the total fire losses of 2009. Two fires alone resulted in losses of over $100 million each. The combined loss for these fires was $440 million.

The largest of the large

The largest-loss fire in 2009 occurred in the pavilion of a riverboat casino that was being renovated and caused an estimated $340 million in damage. The one- and two-story facility covered 118,000 square feet (11,000 square meters) and was of protected noncombustible construction. The one-story pavilion, which housed shops, restaurants, and a large ballroom, was connected by an above-ground walkway to a two-story casino that sits on two barges in the river. The fire destroyed the pavilion, but the casino was untouched.

While welding new duct work into an older duct work system in the kitchen, a welder saw smoke coming from an area where he had just been working. He went to get a fire extinguisher, but it was no longer where he had seen it earlier. Meanwhile, the surveillance department discovered the fire and sent someone to investigate; the method of discovery was not reported. The investigator confirmed the fire, having seen a hole burned through the duct work in the ceiling, and the premises was ordered evacuated. At the same time, the fire alarm sounded.

The fire spread to the ballroom, then to the hallway and throughout the structure. Arriving firefighters found that the fire had spread through the roof of the new construction area of the pavilion and started an interior attack. They also made trench cuts in the roof in an effort to stop the fire's spread. As conditions deteriorated, however, the incident commander ordered the firefighters inside and on the roof to evacuate, and a defensive attack was begun with master stream appliances.

During the fire, water availability became a problem; no cause was reported. Thirty extra tankers were requested from nearby communities to start a tanker shuttle of water to the scene. It was not reported if the river was used as a water supply.

Where fires occurred

Nineteen of the 24 large-loss fires of 2009 occurred in structures, resulting in a total property loss of $716.8 million. Another three were wildland fires that resulted in a total property loss of $169 million, and two more were vehicle fires that resulted in a total loss of $54.5 million. The vehicles involved were a tractor-trailer truck with TV broadcasting equipment and a cargo plane.

Six of the structure fires occurred in buildings that were under construction or being renovated, with a total loss of $429.8 million. The structures included three apartment buildings under construction. The buildings being renovated the casino pavilion mentioned above, a middle school, and a block of stores. Four fires occurred in manufacturing properties—a meat preparation plant, a machinery parts manufacturer, a truss and beam lamination plant, and a saw mill—and resulted in a total loss of just over $102.5 million. Three fires occurred in storage properties—a produce warehouse, a chemical waste facility, and a book storage warehouse—and resulted in losses of $70 million.

Two more structure fires each involved residential properties, both single-family homes, and two basic industry facilities, an 11-barn egg farm and a transformer next to an electric power generating plant, for a total loss of $40 million and $32 million, respectively. There was one fire each in a college classroom building and a furniture store, resulting in losses of $22.5 million and $20 million, respectively.

Information on operating status was reported for 17 of the 19 structure fires. Six were at full operation or occupancy, and three had some construction workers at the site. Eight properties were closed when the fires broke out.

Information on the cause of the fire was reported for 10 of the structures, all 3 wildfires, and 1 vehicle fire. Two of the structure fires and one wildland fire were incendiary. The resulting losses in these fires were $83 million, or 8.8 percent of the fire loss in large-loss fires.

Seven of the fires, five in structures and both the vehicles fires, broke out between 11 p.m. and 7 a.m.

Detection and suppression systems

Information about smoke detection equipment was reported for 16 of the 19 structure fires. Eleven of the 16 fires, or 69 percent, occurred in properties that had no automatic detection equipment. The other five structures had some type of automatic detection equipment. One had complete coverage smoke and manual alarms, and the coverage of the other four systems, which included three smoke detection systems and one unreported type of system, was not reported. Four of the five systems operated effectively, while the operation or effectiveness of the other system was not reported.

Information on automatic suppression equipment was reported for 18 of the 19 structure fires. Eleven structures had no suppression equipment, and seven had some type of system. Three had wet-pipe sprinklers; two provided partial coverage and the coverage of the other was not reported. Two had dry-pipe systems, both with unreported coverage. And two others were reported simply as suppression systems. One was still under construction, and the coverage of the other was not reported.

Three of the seven systems operated, and four did not. One of the systems that operated effectively controlled the fire, but two did not, one because the fire broke out above the covered area and the other because the water available was insufficient. Of the four systems that did not operate, one was not yet operational, the backflow device of another was turned off, and no reason was given for the final two.

Complete information on both detection and suppression equipment was reported for 15 of the 19 large-loss structure fires. In three structures, only detection equipment was present. In three more, only suppression equipment was present. In one fire, the structure had both detection and suppression systems, and eight properties, or 53 percent of all structures for which information was reported, had no coverage.

What we can learn

This study reports on the small share of fires that account for major losses. The number of fires in 2009 that resulted of losses of at least $10 million decreased by almost 31 percent from the total in 2008, and the associated property losses decreased by more than $1.4 billion. That difference in dollar loss can be accounted for by a large decrease in manufacturing property fires and wildfire losses. In 8 of the past 10 years, at least one fire has resulted in a loss of more than $100 million, and in at least four years, there was one loss of more than $1 billion. In 2009, two fires did more than $100 million in damage.

Adherence to the fire protection principles reflected in NFPA’s codes and standards is essential if we are to reduce the occurrence of large-loss fires and explosions in the United States. Proper design, maintenance, and operation of fire protection systems and features can keep a fire from becoming a large-loss fire. Proper construction, storage, and housekeeping will make fires less likely and help control or limit the fire spread should a fire occur.

Where we get our data

NFPA identifies potential large-loss incidents by reviewing national and local news media, including fire service publications. A clipping service reads all U.S. daily newspapers and notifies the NFPA's Fire Analysis and Research Division of major large-loss fires. NFPA's annual survey of the U.S. fire experience is an additional data source, although not the principal one.

Once an incident has been identified, we request information about the fire from the fire department or agency having jurisdiction. We also contact federal agencies that have participated in investigations, state fire marshal's offices, and military sources. The diversity and redundancy of these data sources enable the NFPA to collect the most complete data available on large-loss fires.

About the author

Stephen G. Badger is a fire data assistant in NFPA's Fire Analysis and Research Division and is a retired firefighter from the Quincy, Massachusetts, Fire Department.

Table 1
Large-Loss Fires that Caused $10 Million or More in Property Damage, 2000-2009

Year	Number of Fires	Number of Fires Causing $10 Million or More in 2000 Dollars	Direct Property Damage (in Millions) As Reported	Direct Property Damage (in Millions) In 2000 Dollars
2000	31	31	$1,814	$1,814
2001*	19	15	$762	$702
2002	25	22	$562	$509
2003	21	17	$2,623	$2,417
2004	16	9	$337	$242
2005	16	6	$217	$101
2006	16	13	$380	$305
2007	45	33	$3,393	$2,709
2008	35	23	$2,372	$1,794
2009	24	17	$940	$693

* Excluding the 9/11/01 World Trade center Incident from the loss totals but not the fire incident totals.

Note: Number of fires and unadjusted loss are based on data from studies that appeared in previous annual large-loss studies. Some of the information may differ from previously published material because material was updated after publication.

Note: Adjustment for inflation is based on the Consumer Price Index using 2000 as a base year. Note that adjustment for inflation not only reduces the the total dollar loss for each year but also reduces the number of fires when adjusted losses large enough to qualify as large-loss fires.

Table 2
Large-Loss Fires of $20 Million or More in 2009

Incident and Location	Loss in Millions
Casino pavilion under renovation, Illinois	$340.0
Wildfire, California	$100.0
Meat preparation plant, Minnesota	$50.0
TV broadcasting vehicle, Texas	$44.0
Wildfire, South Carolina	$44.0
Apartment building under construction, Indiana	$38.0
Produce warehouse, North Carolina	$30.0
Chemical waste recycling storage, Ohio	$29.7
Machinery parts manufacturing, Arkansas	$25.0
Single-family home, Michigan	$25.0
Wildfire, California	$25.0
College classrooms, Ohio	$22.5
Furniture store, Texas	$20.0
Egg farm barns, Texas	$20.0
Total Fires: 14	$813.2

Source: NFPA's Fire Incident Data Organization (FIDO).

Table 3
2009 Large-Loss Fires by Major Property Use Classification

Property Use	Number of Fires	Percent of Fires	Total Dollar Loss	Percent of Loss
Special Properties	6	25%	$429,784,856	45.7%
Manufacturing	4	17%	$102,500,000	10.9%
Wildlands	3	13%	$169,000,000	18.0%
Storage	3	13%	$69,980,000	7.4%
Vehicle	2	8%	$54,500,000	5.8%
Residential	2	8%	$40,000,000	4.3%
Basic Industry	2	8%	$32,000,000	3.4%
Educational	1	4%	$22,500,000	2.4%
Stores and Offices	1	4%	$20,000,000	2.1%
Total	24	100%	$940,264,856	100.0%

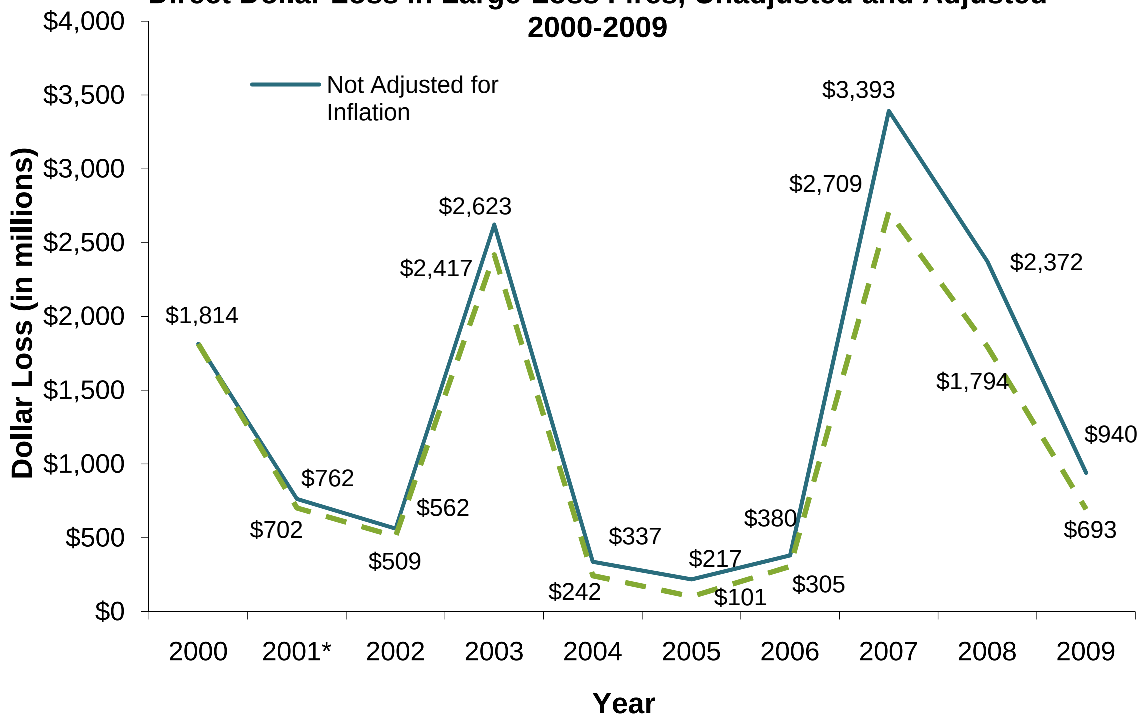
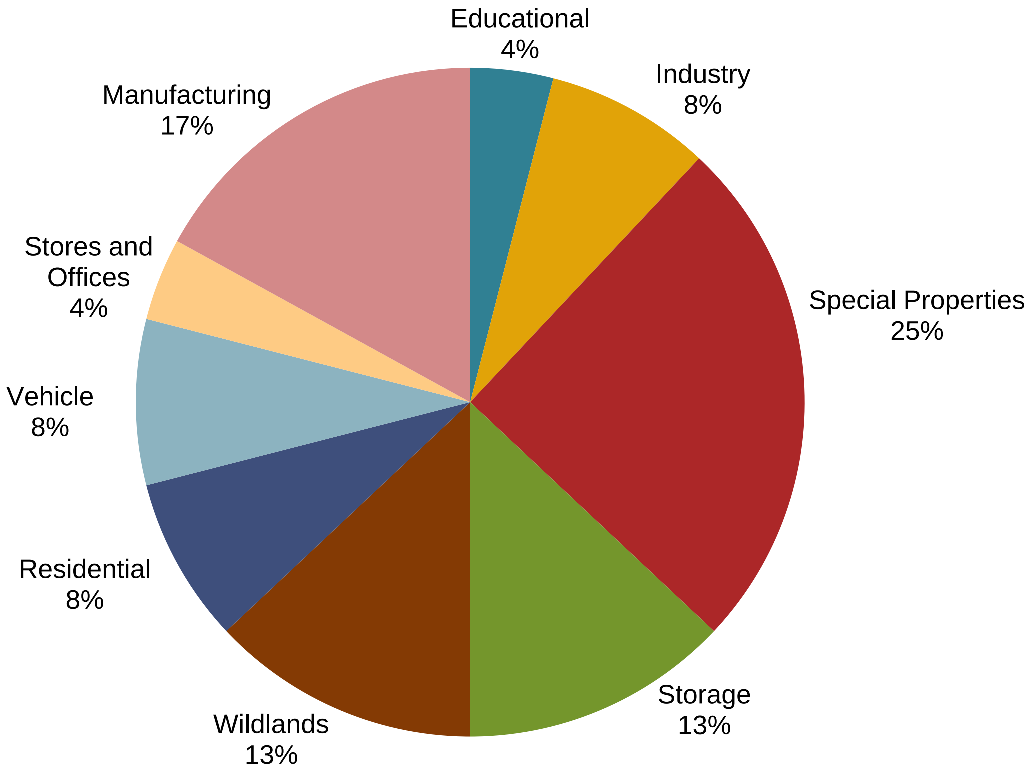
Direct Dollar Loss in Large-Loss Fires, Unadjusted and Adjusted
2000-2009



Note:Losses exclude the 9/11/01 World Trade Center Incident

Figure 3
2009 Large-Loss Fires by Major Property Use



2009 Large-Loss Fire Incidents

Special Properties

Illinois
$340 million
March, 9:33 a.m.

Property Characteristics and Operating Status
This was a one- and two-story casino pavilion that covered 118,000 square feet (10,963 square meters) and was of protected noncombustible construction. An elevated walkway separated the pavilion from a two-story casino. The pavilion contained shops, restaurants, and a ballroom. At the time of the fire, the structure was undergoing major renovations, and construction workers were on site.

Fire Protection Systems
The fire alarms present operated and notified the workers, who evacuated safely. No information was reported as to the presence or absence of automatic suppression equipment.

Fire Development
A welder was adding new ductwork to existing grease ducts in the kitchen when he spotted smoke and fire. He tried to get an extinguisher but could not find it. Grease and wood structural members ignited, and the fire spread to a large ballroom, then into the hallway and throughout the building.

Contributing Factors and Other Details
The pavilion was a total loss, but the casino was untouched by the fire due to the work of the firefighters at the elevated walkway separating the two structures. The structure sustained a loss of $290 million, and its contents sustained damages of $50 million.

Indiana
$38 million
March, 3:20 a.m.

Property Characteristics and Operating Status
This six-story apartment building was under construction at the time of the fire. The building covered 345,000 square feet (32,052 square meters) and was of unprotected wood-frame construction. Construction was nearly complete. No one was on site at the time of the fire.

Fire Protection Systems
Neither automatic detection nor suppression equipment was present.

Fire Development
This incendiary fire was set on the ground level in the rear of the building. No further information was reported.

Contributing Factors and Other Details
Firefighters were dispatched to calls for smoke in the area. Upon arrival, they found heavy smoke and fire in the building. They mounted an interior attack until conditions deteriorated and they were withdrawn. At the same time, exposure protection successfully kept the fire from spreading to two adjacent structures.

Washington
$19.8 million
November, 1:06 a.m.

Property Characteristics and Operating Status
This two-story middle school of unprotected ordinary construction covered 28,000 square feet (2,601 square meters). The building was being renovated at the time. No one was on site when the fire broke out.

Fire Protection Systems
Smoke detection equipment was present throughout the school, and there were manual pull stations at the exits. The smoke alarms were not located in the area of the fire, but they activated. There was a partial-coverage wet-pipe sprinkler system, but the fire broke out above the system so, although it activated, it was ineffective.

Fire Development
The fire, the cause of which was undetermined, broke out in the ceiling-attic assembly.

Contributing Factors and Other Details
Upon finding heavy fire and smoke issuing from the school, arriving firefighters began an interior attack. Due to fire growth and deteriorating conditions, however, they were withdrawn to an exterior attack. Structural damage was reported at $19,270,487; damage to its contents was reported to be more than $500,000.

Washington
$12 million
June, 8 p.m.

Property Characteristics and Operating Status
This five-story apartment building was under construction, covered 11,250 square feet (1,045 square meters), and was of unprotected wood-frame construction. No one was at the site at the time of the fire.

Fire Protection Systems
The automatic detection system had not yet been installed. Although a sprinkler system had been installed up to the second story, it was not yet operational.

Fire Development
Roofers had been using a torch during the day. Several spot fires had occurred, but they were thought to have been extinguished. However, overlooked embers had fallen into the void between the insulation, ceiling, and roof assembly, and a breeze provided enough air for a fire to flare up nearly four hours later. The fire spread rapidly through the wooden construction.

Contributing Factors and Other Details
Sheetrock had not yet been installed to protect the wood framing, and the fire spread rapidly, completely destroying the building.

Montana
$10 million
March, 8:30 a.m.

Property Characteristics and Operating Status
This two-story block of stores was being renovated in a downtown area. The store in which the fire started was 140 feet (43 meters) by 25 feet (8 meters) and was of unprotected wood-frame construction. Construction workers were on site when the fire broke out.

Fire Protection Systems
Neither automatic detection nor suppression equipment was present.

Fire Development
This fire broke out when embers from hot work fell into a basement partition wall and ignited paper or plastic. The fire then ignited wood framing and joists, and spread to the first and second stories through the balloon construction.

Contributing Factors and Other Details
Hot work was done without a fire watch, and there were no portable extinguishers at the location. Firefighters were able to make an interior attack before conditions deteriorated and crews were withdrawn. Winds blowing at 35 miles (56 kilometers) per hour and gusting up to 50 miles (81 kilometers) per hour hindered firefighting operations.

Oklahoma
$10 million
October, 6:01 p.m.

Property Characteristics and Operating Status
This four-story, 148-unit apartment building was under construction. The building covered 179,000 square feet (16,630 square meters) and was of unprotected wood-frame construction. Construction workers were at the site when the fire broke out.

Fire Protection Systems
No information was reported as to the presence or absence of smoke alarms. A wet-pipe

sprinkler system was present, but its coverage was not reported. The system failed to operate, but the reason for this was not reported.

Fire Development
The only information reported was that the fire broke out in a storage room on the first floor.

Contributing Factors and Other Details
None reported.

Manufacturing Properties

Minnesota
$50 million
April, 10:22 a.m.

Property Characteristics and Operating Status
This two-story meat preparation plant covered 300,000 square feet (27,871 square meters) and was of unprotected ordinary construction. The plant was in full operation at the time of the fire.

Fire Protection Systems
There was no detection equipment or suppression equipment present.

Fire Development
The fire began in the ceiling near the exhaust chimney of a cooker and burned undetected for a while.

Contributing Factors and Other Details
Firefighters had trouble reaching the fire because of barriers and obstructions created by multiple ceilings and extensive piping between the ceilings. Firefighters were concerned about a potential release of anhydrous ammonia. The fire destroyed more than a million pounds (453,592 kilograms) of food.

Arkansas
$25 million
July, 4:43 a.m.

Property Characteristics and Operating Status
This one-story machinery parts manufacturing plant covered 250,000 square feet (23,226 square meters). Its type of construction was not reported. No one was at the site when the fire broke out.

Fire Protection Systems
Neither automatic detection nor suppression equipment was present.

Fire Development
Lightning struck a roof vent and started a fire in the storage area.

Contributing Factors and Other Details
A security guard in a nearby facility detected the fire nearly 3½ hours after the lightning strike and called the fire department to report smoke in the area. By the time firefighters arrived, the factory was heavily involved in flames. The delayed discovery, as well as the high-rack storage, made fighting the blaze difficult. Damage to the structure was estimated at $15 million, and damage to its contents was estimated at $10 million. The large monetary loss was due to a large number of machines and a warehouse full of finished product.

Washington
$15 million
May, 10:35 p.m.

Property Characteristics and Operating Status
This one-story wood truss and beam laminating plant was of unprotected noncombustible construction and covered 5,000 square feet (465 square meters). No one was in the plant at the time of the fire.

Fire Protection Systems
No smoke alarms or suppression equipment were present.

Fire Development
The cause and origin of the fire were undetermined.

Contributing Factors and Other Details
Damage to the building came to $5 million; damage to its contents came to $10 million.

California
$12.5 million
September, 10:34 a.m.

Property Characteristics and Operating Status
This two- and three-story saw mill was of unprotected, wood-frame construction, had metal-covered walls, and covered 19,500 square feet (1,812 square meters). The mill was operating at the time of the fire.

Fire Protection Systems
There were no smoke alarms. A dry-pipe sprinkler system of unreported coverage was present, and all the sprinklers activated, but no water flowed because a backflow device had been turned off.

Fire Development
The fire began when cutting torch operations ignited sawdust and wood chips.

Contributing Factors and Other Details
The rapid fire spread was attributed to the presence of sawdust, pitch, and a large quantity of wood throughout the structure. The fire also spread through the many vertical openings in the walls. Lack of water prevented the sprinkler system from controlling the fire. Air tankers made two fire retardant drops, followed by water drops from helicopters. The loss to the structure was estimated at $12 million and to the contents at $500,000.

Wildland

California
$100 million
May, 1:40 p.m.

Property Characteristics and Operating Status
This fire occurred in a wildland/urban interface area.

Weather Conditions
The temperature at the time was in the 80oF (20oC) range, and wind was from the west at 5 miles (8 kilometers) per hour.

Fire Development
The fire broke out when a metal cutting wheel on a brush trimmer hit a rock and the spark ignited fine fuels. The fire smoldered undetected by the equipment operator until a motorist on a nearby highway spotted it about an hour after ignition.

Contributing Factors and Other Details
The fire destroyed 82 homes and burned 8,733 acres (3,534 hectares). Thirty-two firefighters were injured fighting this fire. At one time, a fire shelter was deployed, but it was abandoned before it was used.

South Carolina
$44 million
April, 12:22 p.m.

Property Characteristics and Operating Status
This fire occurred in a wildland/urban interface area.

Weather Conditions
The temperature was 71°F (22°C), humidity was 25 percent, winds were from the west at 17 miles (27 kilometers) per hour with gusts to 30 miles (48 kilometers) per hour, and rainfall was below normal.

Fire Development
A property owner's debris fire burned out of control and started this 19,130-acre (7,742-hectare) wildfire.

Contributing Factors and Other Details
Gusty winds, dry conditions, and volatile vegetation of pine, palmetto, gall berry (shrub), wax myrtles, and other waxy plants contributed to the fast spread of this fire. Organic soils allowed the fire to burn under the fire lines, trees with no root systems to fall, and equipment to bog down in the many snags and holes. On the first night of the blaze, two firefighters operating tractors were forced to deploy their fire shelters when the wind shifted and their vehicles bogged down. They were uninjured. The fire destroyed 76 homes and damaged another 97, causing up to 4,000 people to evacuate their homes. Timber loss was estimated at $17 million, and structural and content loss in the city was estimated at $20.5 million. The rest was miscellaneous county, state, and forestry losses to fences, outbuildings, roads, and other infrastructure.

California
$25 million
August, 2:22 p.m.

Property Characteristics and Operating Status
This fire occurred in a wildland/urban interface area.

Weather Conditions
Temperature at the time was 90°F (32°C), and the wind was from the west at 15 miles (24 kilometers) per hour.

Fire Development
This was an incendiary fire. No further information was reported.

Contributing Factors and Other Details
The wind-driven fire destroyed 65 homes and 5 businesses, and burned 311 acres (126 hectares).

Storage Properties

North Carolina
$30 million
April, 9:40 p.m.

Time: Property Characteristics and Operating Status
This one-story produce warehouse, which contained crates of sweet potatoes, was of unprotected noncombustible construction and covered 40,000 square feet (3,716 square meters). The facility was closed for the weekend.

Fire Protection Systems
No information was reported as to the presence or absence of automatic detection equipment. There was a partial-coverage wet-pipe sprinkler system, which activated and kept the fire from spreading into the protected area of the building.

Fire Development
The cause of the fire was unknown and is under investigation. The fire began in an exterior shelter and spread into and throughout the nonprotected area of the warehouse. Upon arrival, firefighters found the warehouse well involved. An arriving pumper supplied the sprinkler system in the protected area of the building through the fire department connection, while firefighters made a defensive attack against the involved section.

Contributing Factors and Other Details
Two firefighters were injured. The loss to the building was estimated at $15 million, and damage to the contents was estimated at $15 million.

Ohio
$29.7 million
May, 12:07 a.m.

Property Characteristics and Operating Status
This 20-acre (8-hectare) chemical waste facility comprised eight structures of various types and sizes. The explosion occurred in a one-story building that covered 7,500 square feet (697 square meters). The type of construction was not reported. At the time of the explosion, six workers were in different parts of the facility.

Fire Protection Systems
Smoke alarms were present in the building where ignition occurred, but their coverage was not reported, and it is not known if they operated. There was no automatic suppression equipment.

Fire Development
A flame in a natural gas burner in the lab/operations building in front of the tank farm ignited a vapor cloud from an overpressure leak in the tank farm, causing a large explosion and fire.

Contributing Factors and Other Details
The explosion heavily damaged all the structures in the facility, as were about 20 surrounding residences and 5 businesses. Four civilians were injured in the explosion, and a firefighter was injured fighting the fire.

Florida
$10.3 million
October, 6:51 p.m.

Property Characteristics and Operating Status
This single-story book storage building covered 19,500 square feet (1,812 square meters). No information about the operation of the building or the type of construction was reported.

Fire Protection Systems
Neither smoke alarms nor automatic suppression equipment was present.

Fire Development
No information was reported.

Contributing Factors and Other Details
Damage to the structure was estimated at $10 million, and damage to its contents was estimated at $300,000.

Vehicle

Texas
$44 million
April, 3:55 a.m.

Property Characteristics and Operating Status
A tractor-trailer containing electronic equipment for television sports broadcasting caught fire on an interstate highway. The operator was the only person in the truck.

Fire Development
No information was reported.

Contributing Factors and Other Details
No information was reported.

Texas
Date, Time of Alarm, Dollar Loss
January, 4:38 a.m., $10,500,000

Property Characteristics and Operating Status
This fire involved a twin-engine cargo plane landing at an airport.

Fire Development
The plane crashed short of the runway, struck the approach lighting system, and caught fire.

Contributing Factors and Other Details
Fire damage to the aircraft was estimated at $10 million, while damage to the cargo it was carrying was estimated at $500,000. For further information, read the NTSB accident report online.

Residential

Michigan
$25 million
July, 4:19 a.m.

Property Characteristics and Operating Status
This two- and three-story, single-family home of unprotected wood-frame construction covered 23,000 square feet (2,137 square meters). The house was occupied at the time of the fire.

Fire Protection Systems
Smoke alarms of unreported coverage operated to alert the occupants. There was no automatic suppression equipment.

Fire Development
The cause of this fire, which broke out in a lower-level recreation room, was undetermined. It traveled into a void between the floors and up the walls to the upper-level hallway.

Contributing Factors and Other Details
The occupant evacuated the structure. Firefighters were forced from an interior attack by a back draft on the upper level of the house. Damage to the structure was estimated at $15 million, and damage to the contents, which included artwork, was put at $10 million.

District of Columbia
$15 million
July, 8:15 p.m.

Property Characteristics and Operating Status
This three-story, single-family home of unprotected wood-frame construction covered 1,710 square feet (159 square meters). There was one person at home when the fire broke out.

Fire Protection Systems
Smoke alarms of unreported coverage were present and operated. No automatic suppression equipment was present.

Fire Development
The cause of this fire, which broke out on a balcony or porch, is under investigation.

Contributing Factors and Other Details
The fire was shielded from public view until it had engulfed a large portion of the porch and a neighbor spotted it. Another neighbor's attention was caught by the sounding alarms around the same time. Multiple roof, floor, and ceiling collapses forced firefighters to an exterior position. The water supply was an issue, although no further information was reported. Damage to the structure, which contained quite a bit of combustible artwork and decorative finishes, was estimated at $6 million. Damage to the contents, including the artwork, was estimated at $9 million. One firefighter was injured. The occupant evacuated the structure unharmed.

Basic Industry

Texas
$20 million
July, 5:36 p.m.

Property Characteristics and Operating Status
The fire started in a manure tunnel connecting one barn of this 11-barn egg farm to another that was 20 feet (6 meters) high, of unprotected wood-frame construction, and covered 45,000 square feet (4,181 square meters). This barn and four others were destroyed. No one was in the facility at the time of the fire.

Fire Protection Systems
Neither automatic detection nor suppression equipment was present.

Fire Development
The fire broke out in a manure tunnel where welding had been done earlier. Hot materials that had dropped into the manure and feathers on a conveyer belt flamed after the workers had left for the day, and the fire burned in the tunnel between the buildings before it spread to the barns.

Contributing Factors and Other Details
Firefighters from 12 departments arrived to find at least two barns totally engulfed in flames and tried to cool exposed structures using an irrigation well on an adjacent property as a water supply. Three firefighters were injured in the process.

Illinois
$12 million
September, 1:33 p.m.

Property Characteristics and Operating Status
This was a transformer next to a power plant. No additional information was reported.

Fire Protection Systems
There was no information available as to the presence or absence of detection equipment. A fire pump and an unreported type of suppression system failed to operate for an unreported reason.

Fire Development
A mechanical malfunction in the transformer led to the fire, which spread to the roof of the power plant.

Contributing Factors and Other Details
By the time local fire companies arrived, the plant fire brigade had extinguished the transformer fire using foam, and the brigade and the fire department together extinguished the fire on the roof. Water from a nearby lake had to be drafted and trucked to the scene, so additional tankers were called to assist. Early in the incident, live power lines overhead hampered firefighters' activities.

Educational Properties

Ohio
$22.5 million
February, 5:25 p.m.

Property Characteristics and Operating Status
This fire started in a tunnel containing wire and fiber optics that extended into a one-story college classroom building that covered 10,000 square feet (929 square meters). The building, which was of protected noncombustible construction, was closed at the time of the fire.

Fire Protection Systems
Neither smoke alarms nor automatic suppression equipment was present.

Fire Development
The cause of the fire was not reported.

Contributing Factors and Other Details
Fire and smoke damaged at least 10 other buildings on campus. Three firefighters were injured during extinguishment operations.

Stores and Offices

Texas
$20 million
May, 8:30 p.m.

Property Characteristics and Operating Status
This two-story furniture store of unprotected ordinary construction was open and operating at the time of the fire. The ground floor area was not reported.

Fire Protection Systems
The store had no automatic detection systems. A dry-pipe sprinkler system of unreported coverage operated, but the fire overwhelmed it, and it shut down within minutes of operating. No reason for this was given.

Fire Development
Someone started this incendiary fire by pouring gasoline in the warehouse and igniting it with an open flame. The fire quickly spread to several pallets containing 150 gallons (568 liters) of highly flammable fabric protector.

Contributing Factors and Other Details
The fabric protector, which was insoluble in water, and the fire loading in the warehouse allowed the blaze to accelerate. Damage to the structure was estimated at $5 million, and damage to its contents was estimated at $15 million. One firefighter was injured.

National Study of Ambulance Transports to United States Emergency Departments: Importance of Mental Health Problems

Abstract
Introduction: Understanding ambulance utilization patterns is essential to assessing prehospital system capacity and preparedness at the national level.
Objective: To describe the characteristics of patients transported to US emergency departments (EDs) by ambulance and to determine predictors of ambulance utilization.
Methods: Data were obtained from the National Hospital Ambulatory Medical Care Survey using mode of arrival, demographic and visit information, ICD-9-CM E and V-codes, and classified reasons for the visit.
Results: The rates for ED visits of persons conveyed by ambulence were stable between 1997 and 2003, consisting of approximately one in every seven ED visits (14%). In 2003, there were 16.2 million ED visits for which an ambulance was used in the US. However, for patients with mental health visits, nearly one in three ED presentations (31%) arrived by ambulance. Significantly higher rates of ambulance use were associated with: (1) mental health visits; (2) older age; (3) African-Americans; (4) Medicare or self-pay insurance status; (5) urban ED location; (6) US regions outside of the South; (7) presentation between 12 midnight to 0800 hours; (8) injury-related visits; (9) urgent visit status; and/or (10) those resulting in hospital admission. Among mental health patients, older age, self-pay insurance status, urban ED location, regions outside the southern US, and urgent visit classification predicted ambulance use. Ambulance usage within the mental health group was highest for suicide and lowest for mood and anxiety disorder-related visits.
Conclusion: Reliance on ambulance services varies by age, insurance status, geographic factors, time of day, urgency of visit, subsequent admission status, and type of mental health disorder. Even after controlling for many confounding factors, mental health problems remain an important predictor of ambulance use.

Larkin GL, Claassen CA, Pelletier AJ, Camargo CA: National study of ambulance transports to United States emergency departments: The importance of mental health problems. ***Prehosp Disast Med*** **2006;21(2):82-90.**

Introduction

Of the 114 million visits to US emergency departments (EDs) in 2003, an estimated 16 million arrived by ambulance (14%).[1] Given that basic ambulance transport average charges equal [US] $550–660 per trip, emergency medical services (EMS) transports to the ED cost the nation almost $10 billion annually.[2–4] In the context of ever-increasing EMS demand, ED closures and overcrowding have placed serious compensatory strains on existing prehospital resources, resulting in longer transport times, increased members of ambulance diversions, and longer out-of-service times for individual units.[5–7]

A number of studies have examined the relationship between system-specific predictors and ambulance use in narrowly defined service areas,[8–11] but there is a paucity of national, population-based data on ambulance utilization.[12] A Boston study by Rucker *et al* examined patient-specific predictors of ambulance use among non-mental health patients, and found that managed care insurance status, clinical severity, and older age were associated positively with increased usage.[13]

More inclusive, epidemiologically based, ED studies suggest that mental-health patients often rely on prehospital care while psychiatric visits constitute an increasing burden on emergency services nationwide.[14] Some authors have suggested that patients with mental illness are over-represented among ED ambulance referrals as they allegedly abuse or misuse EMS services.[15–19] A study from Australia showed that the strongest predictors of ambulance use in Brisbane were >65 years of age and were experiencing a mental health condition.[20] In San Diego County, California, psychiatric problems have been listed among the most prevalent chief complaints for both emergency and non-emergency ambulance transports for five continuous years (1999-2004).[21] To date, no large studies have examined the specific predictors of ambulance usage among mental health patients presenting to an ED, an epidemiologically important and rapidly growing subgroup of consumers seeking emergency care.

The purpose of this paper is to examine both demographic and clinical correlates of ambulance utilization for a national, population-based sample of ED visits. Also, the predictors of overall ambulance utilization are identified and the subgroups of ED patients with mental disorders are described.

Methods

Initiated in 1992 as part of the ambulatory component of the National Health Care Survey, the National Hospital Ambulatory Medical Care Survey (NHAMCS) assesses ED and outpatient department utilization by employing a four-stage probability sample of visits to non-institutional, general and short-stay hospitals in the US.[1,22] Conducted annually, the NHAMCS covers geographic, primary sampling units, hospitals within primary sampling units, EDs within hospitals, and patients within the EDs. Trained hospital staff from participating institutions collect and code data during a four-week period for each of the sampled hospitals on a 16-month, rotating cycle.[23] National estimates are obtained through the use of a multi-stage, estimation procedure that weighs patient visits and includes three basic components: (1) inflation by reciprocals of the sampling selection probabilities; (2) adjustment for non-response; and (3) a population weighting-ratio adjustment. Quality control includes computer checks to assess inconsistencies with value ranges at the central data entry site, a two-way, 10% independent procedure for medical and drug coding, and adjudication by the National Center for Health Statistics (NCHS) for ambiguous or illegible responses for fields including reasons for visit and diagnosis. The non-response rate for items generally is <5%, and error rates are <2% for items that require medical coding.[24]

Utilizing the ED component of the NHAMCS, mental health-related ED visits were included if their records met any one of three criteria: (1) DSM-IV-TR-based, major mental health problems (ICD-9-CM diagnoses 290.0-305; 307-310; 311-319.0 or V-codes 61.1-71.02 in any of the three available diagnosis fields); (2) NCHS-assigned Patient Reason-for-Visit Classification codes related to mental health in any of the three reason for visit fields,[23–25] 1100.0-1199.9; and/or (3) injury E-codes related to suicide in any of the three injury E-code fields, E950.0-E959.9. Otherwise, visits that did not meet at least one of the above criteria were deemed non-mental-health visits. Those ICD-9-CM codes in the 290–319 ranges were excluded if they were in the following categories: (1) psychosexual disorders (ICD 302); (2) sleeping disturbances (ICD 307.4); (3) physiological malfunction (ICD 306); (4) post-concussive syndrome (ICD-310.2); (5) non-dependent tobacco-use disorder (ICD 305.1); and (6) enuresis and encopresis (ICD 307.6, 307.7). Mental health-related ED visits were assigned specific DSM IV-compatible categories as listed in the Appendix.

For the NHAMCS "mode of arrival" variable for all major years contained in these analyses, <5% of the data were missing. Cases were analyzed by age, gender, race, ethnicity, insurance status, location in a metropolitan statistical area (MSA), and region of the US (Northeast, Midwest, South, and West). Metropolitan statistical areas and US regional categories as used here represent standardized geographical divisions defined by the US Census Bureau.[26] Visits were analyzed further by time and day of presentation, admission status, injury-related visit (defined by ICD-9-CM Injury and Poisoning E-Codes and Reason for Visit Classification) and NHAMCS-defined urgency ("urgent/emergent" or "non-urgent") at triage. Visits were considered "urgent" if expected triage time was recorded as $\leq$1 hour.

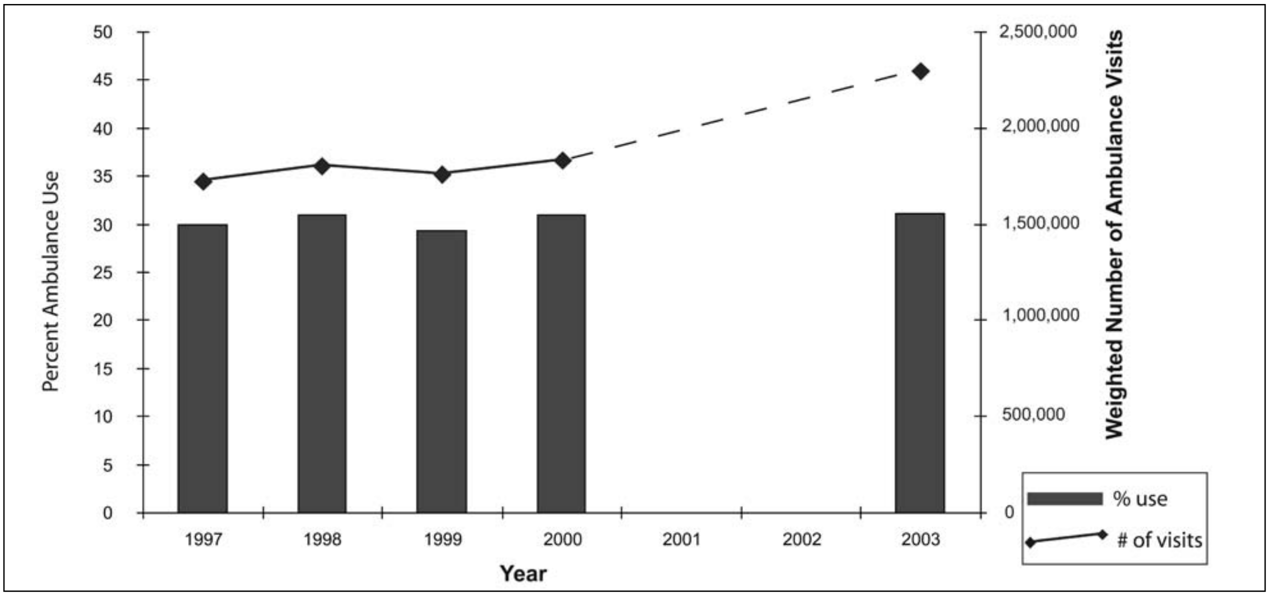
All analyses were performed using STATA 9.0 (StataCorp, College Station, Texas). A masked, ultimate, cluster sample design was used to estimate variance. In accordance with NCHS recommendations, only estimates with a relative standard error of <30% and observations >29 are reported. A non-parametric trend test was performed to examine trends over time. Weighted logistic regression was performed to obtain odds ratios (OR) and 95% confidence intervals (95% CI). To examine the stability of the two final multivariate models, they were tested using 1997 data and the results did not differ materially (data not shown). Two-sided p-values <0.05 were considered statistically significant.

Results

Between 1997 and 2003 inclusive, ambulance utilization remained stable between 14 and 15% for all ED patients (p_{trend} = 0.32). As illustrated in Figure 1, the absolute number of patient visits by ambulance increased even though this proportion of ambulance-related visits remained stable, since the overall number of ED visits continued to rise. Because there was no statistically significant change in the rate of ambulance utilization, all subsequent analyses were focused on all 12 months of 2003 data, the most recent year of NHAMCS available.

There were 16.2 million ambulance visits to the EDs in 2003. Of the 114 million emergency department (ED) visits in the US, approximately one in seven (14%) arrived via ambulance. For the 7.4 million mental health patients, however, nearly one in three (31%) used an ambulance in order to access the ED.

The characteristics of ambulance users versus non-ambulance users are listed in Table 1. Patients arriving by



Larkin © 2006 Prehospital and Disaster Medicine

Figure 1—Mental health ambulance visit trends (# = number; Data not available for 2001, 2002)

ambulance tended to be older, of Caucasian, non-Hispanic race/ethnicity, and had public rather than private insurance. Ambulance users also were more likely to be from an urban area and from a US region outside of the South. They were more likely to arrive during the night, have medical conditions classified as requiring "urgent" care at triage, visit the ED for an injury, and to be admitted to the hospital (all p <0.05). Multivariate predictors for ambulance use among all ED patients are listed in Table 2. Mental health visits were a significant predictor of ambulance usage.

Among patients admitted to US EDs with mental health problems, selected demographic and visit-related descriptors, and their respective age-adjusted odds ratios, by ambulance utilization status are listed in Table 3. Substance and suicide-related visits were 1.8 and 2.6 times (respectively) more likely than were any other ambulance visits. Mental health patients between 60 and 74 years of age were 6.7 times more likely, and patients >75 years were 11.7 times more likely to use the ambulance, compared to patients <15 years. Ambulance users with mental health problems were more likely to arrive between midnight and 0800 hours and tended to have Medicare, self-pay insurance status (versus private), or another insurance provider. Mental health patients in the emergency department are more likely to use an ambulance if their visit is injury-related, or if their visit resulted in admission to the hospital. Urgent classification among mental health patients also was associated with ambulance use. Gender, race/ethnicity, and arrival on a weekend (versus weekday) were not related to ambulance use among visits for mental health reasons.

The results from multivariate logistic regression computed to predict ambulance use among mental health patients are provided in Table 4. Independent predictors included older age, self-pay insurance status, urban location, US regions outside of the South, injury-related visit, and urgent visit classification. Those with an anxiety or mood disorder were less likely (statistically significant) to arrive by ambulance, while suicide-related visits had a borderline statistically significant increase in ambulance usage in the multivariate model.

Discussion

This is one of the few studies to examine ambulance utilization rates for ED patients in the US using a national probability sample. Most demographic variables other than older age were not predictive of ambulance use. The exponential increase in ambulance use with advanced age is in substantial agreement with other studies.[13,20,27] In a study from Australia, Clark and colleagues documented the importance of age and also found that males had higher rates of prehospital EMS utilization than did females across every age group.[28] The US Centers for Disease Control and Prevention's National Center for Health Statistics reported that in 2003, more than half of all visits for those >85 years of age arrived by ambulance,[29] and prehospital EMS can expect to be increasingly busy servicing an aging American population in the future. No effects of race or ethnicity on ambulance were found in the present analysis. A recent study from Canada, by contrast, found minority ethnicity to be associated with both ambulance and police referrals to an ED, but this was a small, non-population-based report from Montreal that included police and ambulance transports together as one outcome.[15]

As indicated by previous studies, an increased rate of ambulance use was found among those seeking emergency care for mental-health reasons. While this is an epidemiologically important group of emergency service consumers, long suspected of over-using and abusing ambulance services,[14,30] the high urgency (35%) and admission (46%) rates of psychiatric patients in this national sample questions these suspicions. Understanding existing prejudice against psychiatric patients may be important, as a study by

Table 2—Multivariate logistic regression: Predictors of ambulance use among all emergency department patients (CI = confidence interval; h = hours)

Schmidt *et al* suggested that EMS workers commonly and systematically under-triage patients with mental health problems.[31] The observation that mental health visits have higher urgency and admission rates, yet longer waiting times, may reflect a similar bias against such patients.

In contrast to non-mental health-related ED visitors, the proportion of male and female ambulance users among mental health patients in this study was equivalent when controlling for other factors. Similarly, multivariate analysis indicated that there were no rural and urban differences in ambulance demand for mental health patients. Ambulance use by mental health patients was lowest in the South. Prior studies have noted a lower density of board-certified psychiatrists per capita in the Northeast,[14] but smaller area variation analysis would be required to further explicate this observation.[32–34] Amidst threats of disaster and increased ambulance diversions due to ED closures and overcrowding, it is imperative that policy makers better understand the variations in demand for pre-hospital services.[35,36]

As with many older studies of ambulance utilization, non-private or self-pay insurance status was found to be predictive of EMS-ED transport among mental health, as well as non-mental health ED attendees.[9,11,12] While examining non-mental health patients, Rucker *et al* (1997) also found that traditional indemnity plans or privately insured patients used ambulance services the least.[13] Privately insured patients are likely to have alternative means of transportation; however, this finding also may be related to service gaps in mental health care delivery for self-pay patients and insurance coverage exclusion under many publicly funded and managed care arrangements for mental health.[37]

Ambulance use also was predicted by late night arrival to the ED (12 midnight to 08:00h), which may be related to the lack of public transportation alternatives at these times, as well as the higher acuity of overdose and substance abuse patients who typically arrive at night, intoxicated. Visits classified as injury-related also were more likely to require EMS services, and this includes self-poisoned and intentionally self-harming patients who are admitted involuntarily.

While anxiety-related visits were the least likely to use an ambulance, both substance abuse and suicide-related visits were highly predictive of ambulance transport. These data support the previously documented finding of increased ambulance use by those suffering from a substance-related disorder.[17,38–40]

There are several potential limitations to this analysis. The selection of candidate predictors was limited by what was collected in the NHAMCS. Acuity could not be measured or controlled. Therefore, it is impossible to assess who truly needed an ambulance and who did not, although it may be surmised that those visits identified as urgent and those ultimately admitted generally were more worthy of ambulance conveyance than others. In addition, the use of administrative databases to assign diagnoses, including mental-health diagnoses, may be problematic.[41] Others have shown that even highly trained emergency physicians can be poor at making accurate mental-health diagnoses. Therefore, the results of this study may under-represent these ED visits.[42–45] In order to control for systematic under-counting, patient-reported reason for visit and physician-identified injury E-codes were included to encompass as many mental health patient visits as the data would allow. Prior work in assessing occult mental-health problems suggests that under-counting is more likely than is over-counting for ED-identified mental health visits.[46]

Conclusion

In summary, the actual numbers of ED-related ambulance transports are rising, although they comprise a stable proportion of all ED visits over time. Ambulance use is associated with age, insurance, urbanicity, time of day, and surrogate markers of acuity, urgency, and admission. Usage also is associated with mental health problems—a significant issue in the wake of disasters or mass casualty incidents. For mental health-related visits, many of the same predictors of ambulance use apply, and patients with substance- or suicide-related visits were found to use ambulances more frequently than do those presenting for care of other disorders. Conversely, patients with anxiety disorders were least

likely to use EMS after controlling for age, race, ethnicity, gender, urbanicity, region, insurance status, and other factors. The twin problems of ED and ambulance over-subscription have at least one common denominator: mental illness. Indeed, psychiatric problems already pose a known and serious population threat in the wake of terrorism and disaster.[47,48] Hence, any solution to this challenge will require a restructuring of the emergency mental healthcare system informed by those working in disaster management, psychiatry, emergency medicine, and prehospital care.

Appendix—Assignments of mental-health related emergency department visits to DSM IV-compatible categories

1. *Mood disorders* (ICD/DSM-IV: 296-296.9; 300.4; 311) e.g., Major Depressive Disorder, depression not otherwise specified, dysthymia, bipolar, other mood disorders; and NCHS reason-for-visit 1110.0 (depression).

2. *Anxiety disorders* (ICD/DSM-IV: 300.00-300.61 except 300.4 dysthymia) e.g., generalized anxiety disorder, panic disorder, obsessive-compulsive disorder, post-traumatic stress disorder, acute stress disorder, agoraphobia, anxiety disorder not otherwise specified; and NCHS reasons for visit 1100.0 (anxiety and nervousness) and 1105.0 (fears and phobias).

3. *Psychotic disorders* (ICD/DSM-IV: 295-295.9, 297.3, 298.8, 298.9) e.g., schizophrenia, psychosis; and NCHS reasons for visit code 1155.0 (delusions or hallucinations).

4. *Substance-related conditions* (ICD/DSM-IV codes 290.44-292.94 and 302.89-305.98) e.g., Alcohol and other substance abuse; and NCHS reasons for visit 1145.0 (alcohol-related problems) and 1150.0 (abnormal drug usage).

5. *Miscellaneous disorders* (ICD-9 V-codes 61.1-71.09) e.g. adjustment disorders, problems in living; and NCHS Reason-for-Visit Classification 1130.0 (behavioral disturbances) and 1165 (other symptoms or problems relating to psychological and mental disorders not elsewhere classified).

6. In addition, because of the emergent nature of the condition, identified *suicide attempts/ideation* were coded as ICD-9 E codes 950-959; and NCHS reasons-for-visit 5820.0 (suicide attempt) and 5820.1 (intentional overdose).

U.S. FIRE DEPARTMENT PROFILE THROUGH 2009

Michael J. Karter, Jr.
Gary P. Stein

October 2010

National Fire Protection Association
Fire Analysis and Research Division

Abstract

NFPA estimates that there were approximately 1,148,100 firefighters in the U.S. in 2009. Of the total number of firefighters 335,950 or 29% were career firefighters and 812,150 (71%) were volunteer firefighters. Most of the career firefighters are in communities that protect 25,000 or more people. Most of the volunteer firefighters (73%) are in departments that protect fewer than 2,500 people. There are an estimated 30,165 fire departments in the U.S. Of these, 2,457 departments are all career, 1,752 mostly career, 5,099 are mostly volunteer and 20,857 are all volunteer. In the U.S., 13,275 or 44% of departments provide EMS service, 4,475 departments or 15% provide EMS service and advance life support, while 12,415 departments or 41% provide no EMS support.

Keywords: fire departments, firefighters, career, volunteer, EMS, statistics.

Acknowledgements

The authors would like to thank all the fire departments *w*ho participated in this year's annual NFPA fire experience survey, and/or to the NFPA Fire Service Survey.

The authors would also like to thank the members of the NFPA staff who worked on the 2009 U.S. Fire Experience Survey, Frank Deeley, John Bald and John Conlon for editing the survey form and making follow-up call to fire departments.

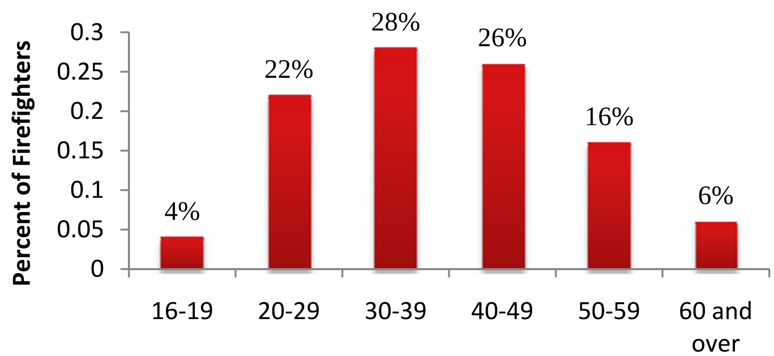
The U.S. Fire Department Profile Through 2009

There are **1,148,100** firefighters in the United States

- **29%** (335,950) are career firefighters.
- **71%** (812,150) are volunteer firefighters.
- Firefighters in smaller communities are more likely to be volunteers.
- Departments protecting larger communities tend to have a higher proportion of firefighters in the age groups 30-39 and 40-49 than smaller communities.

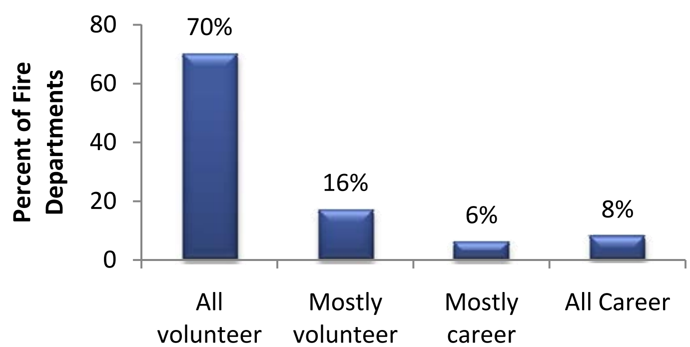
Number of Firefighters in the U. S. by Age Group, 2009



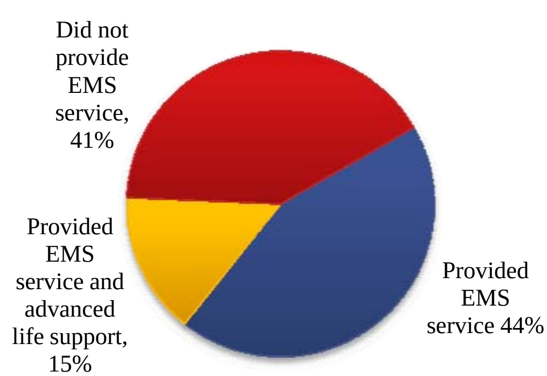
30,165 fire departments protected the United States in 2009

- All career 2,457
- Mostly career 1,752
- Mostly volunteer 5,099
- All volunteer 20,857

Fire Departments by Type, 2009



Fire Department Provision of Emergency Medical Service, 2007-2009 Annual Averages



Firefighters

There were approximately 1,148,100 firefighters in the U.S. in 2009, according to estimates based on NFPA's 2009 National Fire Experience Survey (see Table 1). This is a decrease of 0.1%, or virtually no change from a year ago.

Career firefighters include full-time (career) uniformed firefighters regardless of assignments, e.g., suppression, prevention/inspection, administrative. Career firefighters included here work for a public fire department that protects people in the community in their residences and in public buildings; they do not include career firefighters who work in private fire brigades.

Volunteer firefighters include any active part-time (call or volunteer) firefighters. Active volunteers are defined as being involved in fire fighting. Of the total number of firefighters, 335,950 or 29% were career firefighters, while 812,150 or 71% were volunteers.[1]

Most of the career firefighters (73%) are in communities that protect 25,000 or more people. Most of the volunteers (95%) are in departments that protect fewer than 25,000 people and more than half are located in the small, rural departments that protect fewer than 2,500 people (see Table 1).

Since 1986, the number of career firefighters in the U.S. has gone up quite steadily from 237,500 in 1986 to 335,900 in 2009 for an overall increase of 41% (Table 2, Figure 1). However when the rates of career firefighters per 1,000 people protected for mostly or all career departments are examined, the rates do not increase but stay in a range of 1.64 to 1.77 career firefighters per 1,000 people protected (Table 2, Figure 1). Essentially what this means is that even though the number of career firefighters has gone up, the number of people protected by career firefighters has also gone up as the population in the U.S. has increased.

---

[1] Note that these results are based on a sample survey, and as a result there is a confidence interval associated with each estimate. Based on data reported by fire departments responding to the 2009 National Fire Experience Survey, the NFPA is confident that the actual number of career firefighters falls within the range of 321,900 to 349,900, and the actual number of volunteer firefighters falls within the range of 795,150 to 829,150.

Table 1
Career and Volunteer Firefighters
in the U.S., by Population Protected, 2009

Population Protected	Career	Volunteer	Total
1,000,000 or more	36,800	650	37,450
500,000 to 999,999	35,050	5,700	40,750
250,000 to 499,999	27,750	3,300	31,050
100,000 to 249,999	50,550	2,300	52,850
50,000 to 99,999	43,600	7,750	51,350
25,000 to 49,999	50,250	23,250	73,500
10,000 to 24,999	53,400	75,850	129,250
5,000 to 9,999	20,650	108,800	129,450
2,500 to 4,999	9,850	183,850	193,700
Under 2,500	8,050	400,600	408,650
	335,950	812,150	1,148,100

Source: NFPA Survey of Fire Departments for U.S. Fire Experience, 2009

Note the number of volunteer firefighters for communities of 25,000 or more and the number of career firefighters for communities of less than 10,000 may change considerably from year to year because of their small size and sample variability.

Table 2
Number of Firefighters in the U.S., 1986-2009

Year	**Total** Number	Rate per 1,000 People	**Career** Number	Rate per 1,000 People	**Volunteer** Number	Rate per 1,000 People

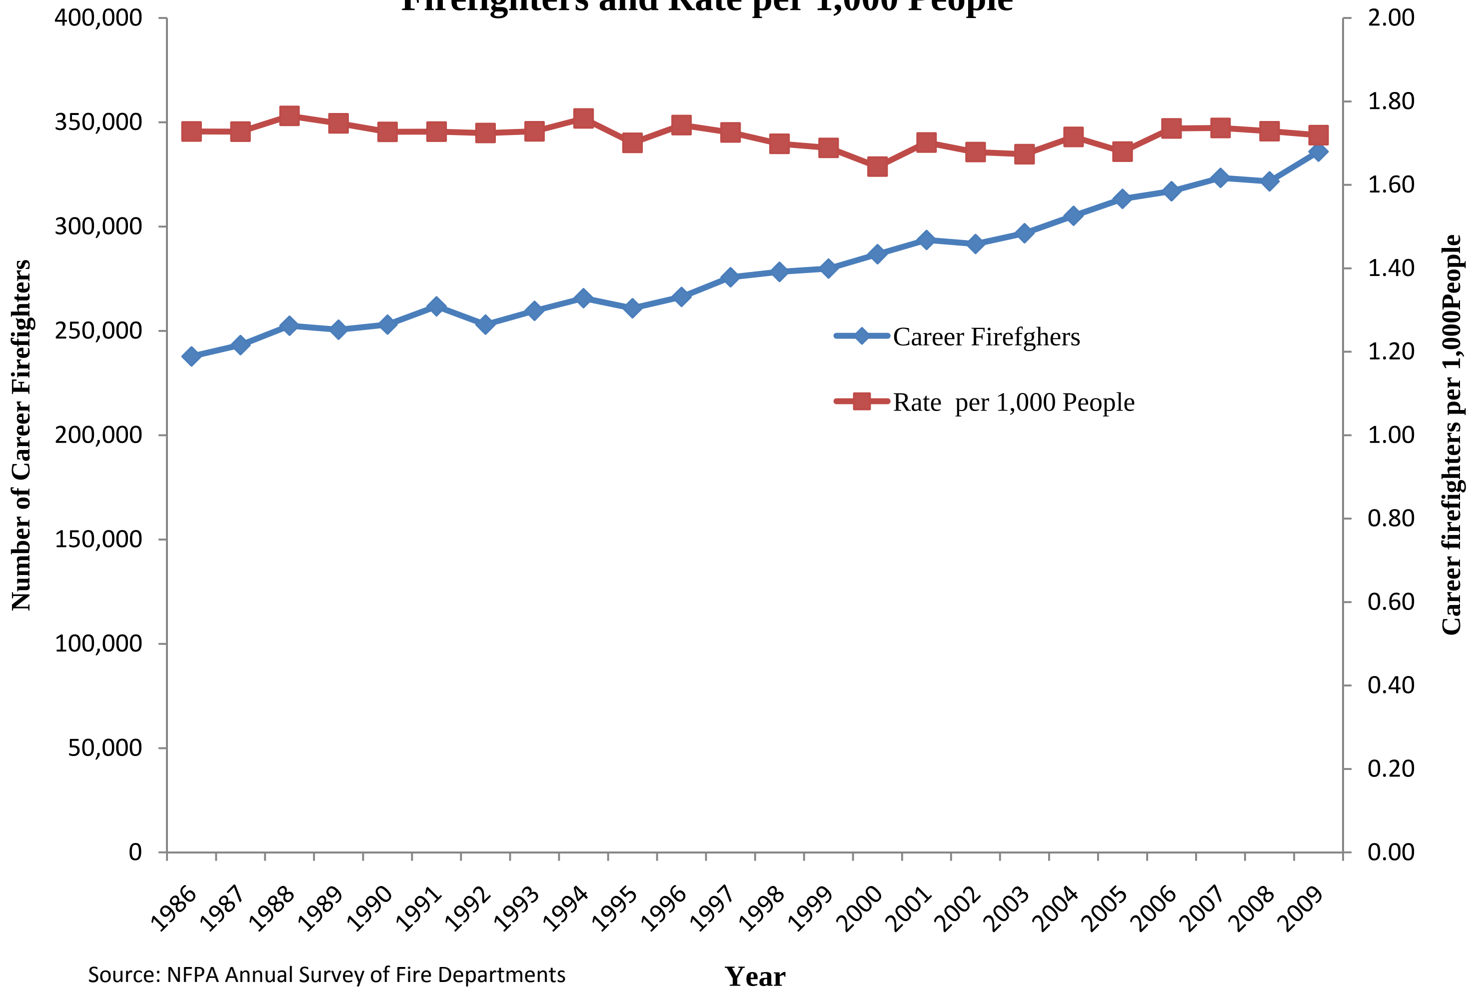
2008	1,148,850	3.81	321,700	1.73	827,150	7.01
2009	1,148,100	3.81	335,950	1.72	812,150	7.27

Source: NFPA Survey of Fire Departments for U.S. Fire Experience (1986-2009).

The rates listed above are based on data reported to the NFPA, and do not reflect recommended rates or some defined fire protection standard.

Note that the rates per 1000 people protected for career firefighters are based on population protected for departments that are comprised of all or mostly career firefighters. While the rates per 1000 people protected for volunteer firefighters are based on population protected for departments that are comprised of all or mostly volunteer firefighters.

Figure 1. Number of Career Firefighters and Rate per 1,000 People



Source: NFPA Annual Survey of Fire Departments for U.S. Fire Experience (1986-2009)

Since 1986, the number of volunteer firefighters declined in the late 1980s and in early 2000s, each time returning to the same level soon after. In 2005-2009, the number of volunteer firefighters has been stable at a level slightly higher than any previously recorded. (Table 2, Figure 2). When the rates of volunteer firefighters per 1,000 people protected for mostly or all volunteer departments are examined, the rates show a downward trend and fall within the range of 6.88 to 8.05 per 1,000 people protected.

According to the U.S. Department of Labor, Bureau of Labor Statistics for the 2005-2009 periods, there were on average 25,060 African-American career firefighters or 9% of the total and 11,140 female career firefighters, or 4% of the total.[2]

A good way to develop a sense of the size of departments relative to the population they protect is to examine the rate of firefighters per 1,000 people. Tables 3 and 4 provide the range of rates for career firefighters in departments protecting at least 25,000 people and for volunteer firefighters in departments protecting fewer than 25,000 people. **It is important to note that the rates are based on data reported to the NFPA and do not reflect recommended rates or some defined fire protection standard**.

Fire departments protecting communities of 25,000 people or more had median rates of career firefighters per 1,000 people of 1.23 to 1.30 (Table 3). However, ranges for departments by community size varied considerably within stratum and particularly for communities of 100,000 to 249,999, 50,000 to 99,999, and 25,000 to 49,999. Note that the rates for a particular size of community varied considerably, because departments face great variation in their specific circumstances and policies, including length of work week, unusual hazards, geographical

[2] Figures are from the *Annual Averages Tables Employment and Earnings*, Bureau of Labor Statistics, Washington, D.C. These numbers can change considerably from year to year because of their small size and sample variability.

Table 3
Career Firefighter Rates
By Population Protected, 2009

	Career Firefighters Per 1,000 People		
Population Protected	**Low**	**Median**	**High**
1,000,000 or more	0.63	1.30	1.39
500,000 to 999,999	0.50	1.29	3.23
250,000 to 499,999	0.62	1.20	2.44
100,000 to 249,999	0.51	1.29	3.88
50,000 to 99,999	0.00	1.30	3.97
25,000 to 49,999	0.00	1.23	5.20

Source: NFPA Survey of Fire Departments for U.S. Fire Experience, 2009.

The rates listed above are based on data reported to the NFPA, and do not reflect recommended rates or some defined fire protection standard.

The rates of a particular size of community may vary widely because departments face great variation in their specific circumstances and policies including length of work week, unusual structural conditions, types of service provided to the community, geographical dispersion of the community, and other factors.

Career rates are shown only for communities with populations of 25,000 or more, where departments are comprised of all career or mostly career firefighters. Also some of these departments have some volunteers, who are not reflected in these figures.

The low and high values are the lowest and highest values by size of community. The median value is chosen so that half the departments had higher values, and half had lower.

dispersion of the community, and scope of services provided (e.g., whether the department handles emergency medical calls).

Fire departments protecting less than 25,000 people had median rates of volunteer firefighters per 1,000 persons in the range of 1.40 to 20.57 (Table 4). This wide range in median rates for smaller communities reflects the fact that it takes a minimum number of firefighters to staff a department regardless of community size. Also volunteer firefighters are usually available on a part-time basis only, so it takes more of them to ensure an adequate response to each alarm.

Length of work week and its effect on rate of career firefighters per 1,000 population by size of community can be seen in Table 5. Tables 6 and 7 provide median rates for career and volunteer firefighters by region and size of community.

Of the 1,148,100 firefighters, the age group accounting for the largest share of firefighters was the 30-39 group, which accounted for 316,950 or 27.6% of all firefighters (Table 8 and Figure 3). Many firefighters fell in the 40-49 age group (25.6%) and the 20-29 age group (21.4%). Firefighters age 50-59 accounted for a smaller share (16.1%), but still more than one-sixth of all firefighters. Few firefighters fell outside this combined range of 20 to 59 years old. Only 3.5% of firefighters were age 16 to 19, and another 5.9% were age 60 and over.

Age group patterns did vary somewhat by population of community protected (Table 9, Figure 3). Departments that protect less than 25,000 people, and are comprised mostly of volunteers, tended to have higher proportions of firefighters in the under 30 age group, while departments that protect 25,000 people, and are comprised mostly of career firefighters, or more had higher proportions of firefighters in the 30-39 and 40-49 age groups.

When age group patterns by year are examined for the 1998-2009 period, there were slight changes over time (Figure 4). The 30-39 and the 40-49 age groups showed slight decreases over the period, while the 50-59 and 60 and over groups showed moderate increases over the period.

Table 4
Volunteer Firefighter Rates
By Population Protected, 2009

	Volunteer Firefighters Per 1,000 People		
Population Protected	**Low**	**Median**	**High**
10,000 to 24,999	0.00	1.40	12.87
5,000 to 9,999	0.00	3.73	13.00
2,500 to 4,999	0.77	7.81	20.06
Under 2,500	5.00	20.57	*

Source: NFPA Survey of Fire Departments for U.S. Fire Experience, 2009.

The rates listed above are based on data reported to the NFPA, and do not reflect recommended rates or some defined fire protection standard.

The rates of a particular size of community may vary widely because departments face great variation in their specific circumstances and policies including unusual structural conditions, types of service provided to the community, geographic dispersion of the community, and other factors.

Volunteer rates are shown only for communities under 25,000, where departments are comprised of all volunteer or mostly volunteers. Also, some of these departments, particularly those with population protected of 5,000 or more, have some career firefighters, who are not reflected in these figures.

The low and high values are the lowest and the highest values by size of community. The median value is chosen so that half of the departments had higher values, and half had lower.

*Because there are a minimum number of firefighters to form even a single company, smaller communities of under 100 people can have very high rates.

Table 5
Career Firefighters per 1,000 People For All Career Departments
By Work Week and Population Protected, 2007-2009

Population Protected	Career Firefighters Per 1,000 People 40-45 hour	46-51 hour	52-60 hour
1,000,000 or more	*	1.43	0.98

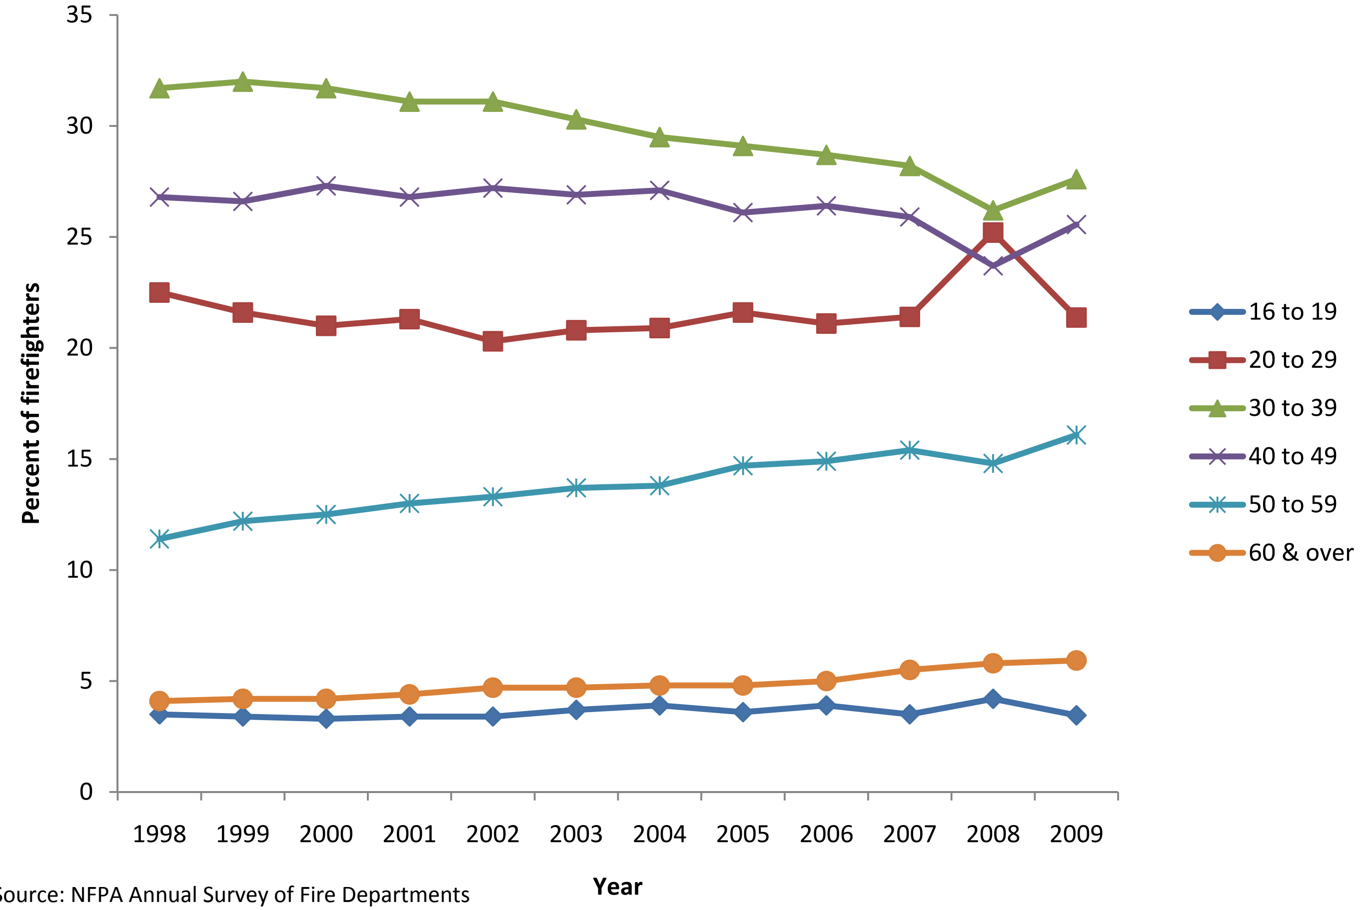
Figure 4. Percent of Firefighters in the U.S. by Age Group by Year



Source: NFPA Annual Survey of Fire Departments for U.S. Fire Experience (1986-2009)

Fire Departments

There are an estimated 30,165 fire departments[3] in the United States. Of these, 2,457 departments or 8.1% are all career[4]; that is, they are comprised solely of career firefighters. An estimated 1,752 departments (5.8%) are mostly career, while 5,099 (16.9%) are mostly volunteer. An estimated 20,857 departments (69.1%) are all volunteer (Table 10).

Another way to put this is that 14% of all departments are all career or mostly career but protect 64% of the U.S. population, while 86% of the departments are mostly volunteer or all volunteer and protect 36% of the population (Table 10).

The number of fire departments by size of community is displayed in Table 11. Department type did vary considerably by population protected. For community sizes 25,000 and above, the percentage of departments classified as all career or mostly career ranged from 71 to 100%, while for community sizes less than 25,000, the percentage of departments classified as all volunteer or mostly volunteer ranged from 57 to 99% (Table 12).

---

[3] A fire department is a public organization that provides fire prevention, fire suppression and associated emergency and non-emergency services to a jurisdiction such as a county, municipality, or organized fire district.

[4] Department type is broken into four categories. All career departments are comprised 100% of career firefighters. Mostly career is comprised of 51 to 99% career firefighters, while mostly volunteer is comprised of 1 to 50% career firefighters. All volunteer departments are comprised 100% of volunteer firefighters.

Table 10
Number of Departments and Percent of U.S. Population Protected
By Type of Department, 2009

Type of Department	**Number**	**Percent**	**Percent of U.S. Population Protected**
All Career	2,457	8.1%	47.0%
Mostly Career	1,752	5.8%	16.7%
Mostly Volunteer	5,099	16.9%	16.8%
All Volunteer	20,857	69.1%	19.5%
Total	30,165	100.0%	100.0%

Source: NFPA Fire Service Inventory, and 2009 NFPA Survey of Fire Departments.

Type of department is broken into four categories. All career departments are comprised of 100% career firefighters. Mostly career is comprised of 51 to 99% career firefighters, while mostly volunteer is comprised of 1 to 50% career firefighters. All volunteer departments are comprised of 100% volunteer firefighters.

Type of department is broken into four categories. All career departments are comprised of 100% career firefighters. Mostly career is comprised of 51 to 99% career firefighters, while mostly volunteer is comprised of 1 to 50% career firefighters. All volunteer departments are comprised of 100% volunteer firefighters.

Fire Department Apparatus and Stations

Estimates of the number of apparatus and stations in the United States for the 2007-2009 period indicate that there were 68,400 pumpers, 6,750 aerial apparatus, 74,250 other suppression vehicles (which includes pumpers less than 1,000 gpm, hose usage, brush vehicles, tanker, etc.) and 52,050 stations. Table 13 provides a breakdown of the average apparatus and station rates by community size.

It is worth emphasizing what the rates in Table 13 really mean. The numbers reflect averages of apparatus and station rates per 1,000 people by population protected reported to the NFPA. They do *not* represent recommended rates or some defined fire protection standard.

The rates are higher for departments protecting smaller communities (under 25,000). This is because it takes a minimum number of apparatus and stations to operate a fire department regardless of the number of people protected. For instance, for a department protecting 1,000 people, you would expect according to Table 13 on the average 1.163 pumpers, 1.804 other suppression vehicles, .030 aerial apparatus, and .934 stations. The .943 stations per 1,000 people is the highest rate shown in Table 13, but for this community size it is equivalent to one station per department. Another way to put this is that for every 100 departments reporting 1,000 people, you would expect approximately 116 pumpers, 180 other suppression vehicles, 3 aerial apparatus, and 94 stations. For communities of 25,000 to 999,999, the rates tend to be quite similar: .055-.111 pumpers per 1,000 people; and .022-.065 other suppression vehicles; .013-.022 aerial apparatus per 1,000 people, and .054-.096 stations per 1,000 people.

Tables 14, 15, 16, and 17 display the frequency of occurrence of the number of pumpers, other suppression vehicles, aerial apparatus, and stations by size of community.

Table 13
Average Apparatus and Station Rates per 1,000 People
By Community Size, 2007-2009

Population Protected	Pumpers per 1,000 People	Other[1] Vehicles per 1,000 People	Aerial Apparatus per 1,000 People	Stations per 1,000 People

Source: 2007-2009 NFPA Fire Service Survey

Emergency Medical Services

The level of emergency medical service (EMS) provided by fire departments by size of community for the 2007-2009 period can be seen in Table 18. The larger the community, the more likely EMS service was provided. Overall for the country, 13,275 or 44.0% of departments provided EMS service, 4,475 departments or 14.8% provided EMS service and advanced life support, while 12,415 departments or 41.2% provided no EMS service.

U.S. Expenditures on Local Fire Protection

Table 19 shows expenditures on local fire protection by governments, with and without adjustment for inflation. Note that these expenditures adjusted for inflation, have risen 166% from 1980 to 2008. Other municipal service costs like police protection have risen in a similar manner.

Fire protection costs rose 111% from 1986 to 2008 after adjusting for inflation, while the number of career firefighters was increasing 41%. Since chiefs of fire departments serving larger communities report problems with shrinking budgets or with level budgets combined with increasing responsibilities, this clear pattern of increasing fire department resources nationwide is difficult to interpret. Some of the factors possibly contributing to this increase in costs are (1) shrinkage of the work week[5] for some departments, which results in a need to increase staffing and apparatus or to pay firefighters at overtime rates; (2) increased EMS responsibilities requiring increased staffing and, in some communities, a more frequent replacement of apparatus; and (3) costs of retirement and health benefits continuing to rise as they do for the general population.

[5] This is the result at least to some extent of the Fair Labor Standards Act being applied to municipal fire departments.

Table 18
Departments Providing Emergency Medical Service
By Community Size (Percent), 2007-2009

Population Protected	No EMS	EMS	EMS and ALS	Total
1,000,000 or more	0%	0%	100%	100%
500,000 to 999,999	0	31	69	100%
250,000 to 499,999	0	31	69	100%
100,000 to 249,999	3	37	60	100%
50,000 to 99,999	10	36	54	100%
25,000 to 49,999	17	37	46	100%
10,000 to 24,999	28	41	31	100%
5,000 to 9,999	41	41	18	100%
2,500 to 4,999	43	46	11	100%
under 2,500	48	46	6	100%
Nationwide	41	44	15	100%

Source: NFPA Fire Service Survey, 2007-2009

ALS refers to fire departments providing advanced life support.

Table 19
Direct Expenditures on Local Fire Protection

Year	Expenditures (in Billions)	Expenditures (in Billions) Adjusted for Inflation*
1980	$5.7	$5.7
1981	$6.3	$5.7
1982	$7.0	$6.0
1983	$7.6	$6.3
1984	$8.2	$6.5
1985	$8.5	$6.5
1986	$9.6	$7.2
1987	$10.5	$7.9
1988	$11.8	$8.2
1989	$11.9	$7.9
1990	$13.2	$8.3
1991	$13.8	$8.3
1992	$14.4	$8.5
1993	$15.4	$9.0
1994	$16.1	$9.0
1995	$17.0	$9.2
1996	$17.7	$9.3
1997	$19.4	$10.0
1998	$20.3	$10.3
1999	$21.3	$10.5
2000	$23.1	$11.1
2001	$25.0	$11.6
2002	$26.0	$11.9
2003	$27.9	$12.5
2004	$28.4	$12.4
2005	$30.7	$13.0
2006	$34.2	$14.0
2007	$36.8	$14.6
2008	$39.7	$15.2

Data Sources

The report is based on two data sources: the annual NFPA Survey for U.S. Fire Experience, 2009, and the NFPA Fire Service Survey, 2007-2009.

The annual fire experience survey is a sample survey of fire departments in the United States, which serves as the basis for making national estimates of the fire problem. The sample is stratified by the size of the community protected by the fire department. All U.S. fire departments that protect communities of 50,000 or more are included in the sample, because they constitute a small number of departments with a large share of the total population protected. For departments that protect less than 50,000 population, a sample was selected stratified by size of community protected. Survey returns in recent years have ranged from 2,500 to 3,500 departments annually. The survey also includes questions on the number of career and volunteer firefighters. The national projections are made by weighing sample results according to the proportion of total U.S. population accounted for by communities of each size.

The NFPA Fire Service Survey is a three year cycle survey which attempts to survey about one third of the states in the country each year. The survey includes questions on the number of career firefighters, the number of volunteer firefighters, length of work week, number of apparatus and stations, etc. In recent years the survey has had a response rate of about 19% from departments.

National Hospital Ambulatory Medical Care Survey: 2008 Emergency Department Summary Tables

The Ambulatory and Hospital Care Statistics Branch of the Centers for Disease Control and Prevention's National Center for Health Statistics is pleased to release the most current nationally representative data on ambulatory care visits to hospital emergency departments (EDs) in the United States. Statistics are presented on selected hospital, patient, and visit characteristics based on data collected in the 2008 National Hospital Ambulatory Medical Care Survey (NHAMCS). NHAMCS is a national probability sample survey of visits to EDs and outpatient departments of nonfederal short-stay and general hospitals in the United States. Web table estimates are based on sample data weighted to produce annual national estimates and include standard errors. Detailed information on the design, conduct, and estimation procedures of NHAMCS can be found at: http://www.cdc.gov/nchs/ahcd.htm.

As in any survey, results are subject to sampling and nonsampling errors. Nonsampling errors include reporting and processing errors, as well as biases due to nonresponse and incomplete response. In 2008, race was missing for 15% (unweighted) of ED records, while ethnicity was missing for 24% (unweighted) of ED records. As in previous years, missing responses for race and ethnicity were imputed using a warm deck method. Nonetheless, the high amount of missing data are of concern. Tables 3,7,8, and 14 presenting race and ethnicity data include estimates based on both imputed and reported (known) values and estimates based on reported values only. The ''best'' estimates of ED use by race and ethnicity are those that include both imputed and reported data. For those who wish to understand the effects of imputation on percent distributions and their standard errors, we provide ''reported only'' data. Those who wish to conduct a complete-case analysis can use the ''reported only'' data for benchmarking.

Table 1. Emergency department visits, by selected hospital characteristics: United States, 2008

Selected hospital characteristic	Number of visits in thousands	(Standard error of percent)	Percent distribution	(Standard error of percent)	Number of visits per 100 persons per year[1,2,3]	(Standard error of rate)
All visits	123,761	(4,918)	100.0	. . .	41.4	(1.6)
Ownership						
Voluntary	93,847	(5,102)	75.8	(2.6)	31.4	(1.7)
Government	15,237	(2,446)	12.3	(2.0)	5.1	(0.8)
Proprietary	14,677	(3,198)	11.9	(2.5)	4.9	(1.1)
Geographic region						
Northeast	24,529	(1,960)	19.8	(1.5)	45.4	(3.6)
Midwest	27,004	(2,434)	21.8	(1.7)	41.2	(3.7)
South	48,153	(3,188)	38.9	(2.1)	44.0	(2.9)
West	24,075	(2,653)	19.5	(1.9)	34.5	(3.8)
Metropolitan status[4]						
MSA	102,735	(5,271)	83.0	(1.9)	41.1	(2.1)
Non-MSA	21,027	(2,220)	17.0	(1.9)	43.3	(4.6)
Medical school affiliation						
Yes	65,786	(4,527)	53.2	(2.9)	22.0	(1.5)
No or blank[5]	57,975	(4,180)	46.8	(2.9)	19.4	(1.4)
Trauma center						
Yes	46,727	(4,700)	37.8	(3.3)	15.6	(1.6)
No or blank	77,034	(4,811)	62.2	(3.3)	25.8	(1.6)
Season[6]						
Winter	28,302	(3,620)	22.9	(2.8)	9.5	(1.2)
Spring	32,771	(3,384)	26.5	(2.5)	11.0	(1.1)
Summer	33,183	(3,486)	26.8	(2.7)	11.1	(1.2)
Fall	29,504	(3,941)	23.8	(2.9)	9.9	(1.3)

. . . Category not applicable.

[1]Visit rates are based on the July 1, 2008, set of estimates of the civilian noninstitutionalized population of the United States as developed by the Population Division, U.S. Census Bureau.

[2]Population estimates by metropolitian statistical area status are based on estimates of the civilian noninstitutionalized population of the United States as of July 1, 2008, from the 2008 National Heath Interview Survey, National Center for Health Statistics, compiled according to the November 2007 Office of Management and Budget definitions of core-based statistical areas. See http://www.census.gov/population/www/estimates/metrodef.html for more about metropolitan statistical area definitions.

[3]For geographic region and metropolitan statistical area, population denominators are different for each category and thus do not add to total population rate. For other variables, the denominator is the total population.

[4]MSA is metropolitan statistical area.

[5]In 2008, hospitals not affiliated with medical schools include hospitals with unknown or blank medical school affiliation status because this information could not be identified separately. In prior years, the percentage of unknowns or blanks was small.

[6]Winter is December 22 to March 19; spring is March 20 to June 20; summer is June 21 to September 22; and fall is September 23 to December 21.

NOTE: Numbers may not add to totals because of rounding.

Table 2. Emergency department visits, by patient age, sex, and residence: United States, 2008

Selected patient characteristic	Number of visits in thousands	(Standard error of percent)	Percent distribution	(Standard error of percent)	Number of visits per 100 persons per year[1]	(Standard error of rate)

* Figure does not meet standards of reliability or precision.

[1]Visit rates are based on the July 1, 2008, set of estimates of the civilian noninstitutionalized population of the United States as developed by the Population Division, U.S. Census Bureau.

[2]The race groups white, black or African American, Asian, Native Hawaiian or other Pacific Islander, American Indian or Alaska Native, and multiple races include persons of Hispanic and not Hispanic origin. Persons of Hispanic origin may be of any race. Starting with data year 1999, race-specific estimates have been tabulated according to 1997 standards for federal data on race and ethnicity and are not strictly comparable with estimates for earlier years. The percent of visit records with multiple races indicated is small and lower than what is typically found for self-reported race in household surveys.

[3]For 2008, race data were missing for 16.0 percent of visits, and ethnicity data were missing for 27.7 percent of visits. Readers are therefore advised to treat these data with caution. In this table, estimates based on imputed race and ethnicity data are shown separately from comparison estimates using unimputed data. Missing race and ethnicity were imputed using a hot deck approach rather than the previously used cold deck strategy. The imputation process is described more fully in the 2008 public use file documentation (http://www.cdc.gov/nchs/ahcd.htm). Research is currently under way to evaluate further changes to the imputation strategy for use with 2009 data.

[4]"Reported plus imputed" includes race that was reported directly by emergency departments and imputed values for the 16.0 percent of visits for which race was not reported.

[5]"Reported only" calculations are based on 103,905,000 visits with race reported directly by emergency departments. The visits for which race was missing are excluded from the denominator so that readers may compare differences between estimates that include and exclude imputed race values.

[6]"Reported plus imputed" includes ethnicity that was reported directly by emergency departments and imputed values for the 27.7 percent of visits for which ethnicity was not reported.

[7]"Reported only" calculations are based on 89,511,000 visits with ethnicity reported directly by emergency departments. The visits for which ethnicity was missing are excluded from the denominator so that readers may compare differences between estimates that include and exclude imputed ethnicity values.

NOTE: Numbers may not add to totals because of rounding.

Table 4. Wait times at emergency department visits: United States, 2008

Visit characteristic	Number of visits in thousands	(Standard error in thousands)	Percent distribution	(Standard error of percent)
All visits	123,761	(4,918)	100.0	. . .
Time spent waiting to see a physician[1]				
Fewer than 15 minutes	22,105	(1,526)	17.9	(1.1)
15–59 minutes	46,545	(1,981)	37.6	(1.0)
1 hour, but less than 2 hours	19,295	(1,066)	15.6	(0.6)
2 hours, but less than 3 hours	6,636	(501)	5.4	(0.3)
3 hours, but less than 4 hours	2,629	(250)	2.1	(0.2)
4 hours, but less than 6 hours	1,770	(208)	1.4	(0.1)
6 hours or more	662	(94)	0.5	(0.1)
Not seen by a physician	11,078	(1,124)	9.0	(0.8)
Blank	13,041	(1,707)	10.5	(1.3)
Time spent in emergency department[2]				
Less than 1 hour	13,728	(799)	11.1	(0.5)
1 hour, but less than 2 hours	29,750	(1,304)	24.0	(0.5)
2 hours, but less than 4 hours	42,421	(1,800)	34.3	(0.6)
4 hours, but less than 6 hours	18,594	(992)	15.0	(0.4)
6 hours, but less than 10 hours	10,254	(613)	8.3	(0.4)
10 hour, but less than 14 hours	1,803	(138)	1.5	(0.1)
14 hours, but less than 24 hours	1,144	(114)	0.9	(0.1)
24 hours or more	474	(142)	0.4	(0.1)
Blank	5,594	(719)	4.5	(0.5)
Patient arrived in emergency department after business hours[3]				
All ages:				
Yes	80,136	(3,203)	64.8	(0.4)
No	42,498	(1,736)	34.3	(0.3)
Blank	1,128	(308)	0.9	(0.2)

. . . Category not applicable.

[1]Median waiting time to see a physician was 35 minutes.

[2]Median time spent in the emergency department was 154 minutes.

[3]Business hours defined as Monday through Friday, 8 a.m. to 5 p.m.

NOTE: Numbers may not add to totals because of rounding.

Table 5. Mode of arrival at emergency department, by patient age: United States, 2008

Patient age	Number of visits inc thousands	Patient mode of arrival				
		Total	Walk-in[1]	Ambulance	Public service[2]	Unknown[3]
		Percent distribution (standard error of percent)				
All visits	123,761	100.0	77.0 (0.8)	15.8 (0.5)	1.6 (0.2)	5.5 (0.6)
Under 15 years	23,157	100.0	88.5 (1.0)	4.9 (0.5)	*1.1 (0.5)	5.5 (0.7)
Under 1 year	3,684	100.0	87.0 (2.1)	4.2 (0.8)	* . . .	6.4 (1.0)
1–4 years	8,698	100.0	89.3 (1.3)	4.1 (0.7)	*1.0 (0.6)	5.6 (1.0)
5–14 years	10,775	100.0	88.3 (1.1)	5.9 (0.6)	*0.7 (0.3)	5.1 (0.8)
15–24 years	19,823	100.0	83.2 (0.8)	9.5 (0.5)	1.7 (0.3)	5.6 (0.7)
25–44 years	35,185	100.0	81.3 (0.9)	11.3 (0.6)	2.1 (0.3)	5.3 (0.6)
45–64 years	26,335	100.0	72.2 (1.0)	20.3 (0.8)	1.7 (0.3)	5.8 (0.7)
65 years and over	19,261	100.0	55.8 (1.2)	37.5 (1.2)	1.2 (0.2)	5.4 (0.7)
65–74 years	7,479	100.0	66.2 (1.7)	26.3 (1.5)	1.6 (0.3)	5.9 (0.9)
75 years and over	11,781	100.0	49.2 (1.5)	44.7 (1.5)	1.0 (0.3)	5.1 (0.7)

* Figure does not meet standards of reliability or precision.

. . . Category not applicable.

[1]Includes patients arriving by car, taxi, bus, or foot.

[2]Includes patients arriving in a police car, social service vehicle, beach patrol, or escorted or carried by a public service official.

[3]The unknown category includes blanks.

NOTE: Numbers may not add to totals because of rounding.

Table 6. Expected sources of payment at emergency department visits: United States, 2008

Expected source of payment	Number of visits in thousands[1]	(Standard error in thousands)	Percent of visits	(Standard error of percent)
All visits	123,761	(4,918)	. . .	. . .
Private insurance	51,887	(2,904)	41.9	(1.4)
Medicaid or SCHIP[2]	29,701	(1,512)	24.0	(1.0)
Medicare	22,827	(1,094)	18.4	(0.5)
Medicare and Medicaid[3]	4,238	(349)	3.4	(0.3)
No insurance[4]	19,094	(1,238)	15.4	(0.8)
Self-pay	17,859	(1,187)	14.4	(0.8)
No change or charity	1,472	(301)	1.2	(0.2)
Worker's compensation	1,561	(133)	1.3	(0.1)
Other	5,706	(924)	4.6	(0.7)
Unknown or blank	7,492	(1,120)	6.1	(0.9)

. . . Category not applicable.

[1]Combined total of expected sources of payment exceeds "all visits," and percent of visits exceeds 100%, because more than one source of payment may be reported per visit.

[2]SCHIP is State Childrens Health Insurance Program.

[3]The visits in this category are included in both the Medicaid or SCHIP and Medicare categories.

[4]"No insurance" is defined as having only self-pay, or no charge or charity, as payment sources. The individual self-pay and no charge or charity categories are not mutually exclusive.

Table 7. Triage status of emergency department visits, by selected patient characteristics: United States, 2008

Patient and visit characteristic	Number of visits in thousands	Total	Immediate[1]	Emergent[2]	Urgent[3]	Semiurgent[4]	Nonurgent[5]	Unknown or no triage[6]
		Percent distribution (standard error of percent)						
All visits	123,761	100.0	3.7 (0.3)	11.9 (0.8)	38.9 (1.5)	21.2 (1.3)	8.0 (0.9)	16.3 (1.9)

* Figure does not meet standards of reliability or precision.

. . . Category not applicable.

[1]A visit in which the patient should be seen immediately.

[2]A visit in which the patient should be seen in 1–14 minutes.

[3]A visit in which the patient should be seen within 15–60 minutes.

[4]A visit in which the patient should be seen within 61–120 minutes.

[5]A visit in which the patient should be seen within 121 minutes-24 hours.

[6]A visit in which there is no mention of triage level or immediacy rating in the medical record, the hospital did not perform triage, or the patient was dead on arrival.

[7]Other race includes visits by Asian, Native Hawaiian or other Pacific Islander, American Indian or Alaska Native, and persons with more than one race. All race categories include visits by persons of Hispanic origin and not Hispanic origin. Persons of Hispanic origin may be of any race. Starting with data year 1999, race-specific estimates have been tabulated according to 1997 standards for federal data on race and ethnicity and are not strictly comparable with estimates for earlier years. The percent of visit records with multiple races indicated is small and lower than what is typically found for self-reported race.

[8]For 2008, race data were missing for 16.0 percent of visits, and ethnicity data were missing for 27.7 percent of visits. Readers are therefore advised to treat these data with caution. In this table, estimates based on imputed race and ethnicity data are shown separately from comparison estimates using unimputed data. Missing race and ethnicity were imputed using a hot deck approach rather than the previously used cold deck strategy. The imputation process is described more fully in the 2008 public use file documentation (http://www.cdc.gov/nchs/ahcd.htm). Research is currently under way to evaluate further changes to the imputation strategy for use with 2009 data.

[9]"Reported plus imputed" includes race that was reported directly by emergency departments and imputed values for the 16.0 percent of visits for which race was not reported.

[10]"Reported only" calculations are based on 103,905,000 visits with race reported directly by emergency departments. The visits for which race was missing are excluded from the denominator so that

readers can compare differences between estimates that include and exclude imputed race values.

[11]"Reported plus imputed" includes ethnicity that was reported directly by emergency departments and imputed values for the 27.7 percent of visits for which ethnicity was not reported.

[12]"Reported only" calculations are based on 89,511,000 visits with ethnicity reported directly by emergency departments. The visits for which ethnicity was missing are excluded from the denominator so that readers can compare differences between estimates that include and exclude imputed ethnicity values.

[13]Combined total of expected sources of payment exceeds "all visits," and percent of visits exceeds 100%, because more than one source of payment may be reported per visit.

[14]SCHIP is State Children's Health Insurance Program.

[15]The visits in this category are included in both the Medicaid or SCHIP and Medicare categories.

[16]"No insurance" is defined as having only self-pay, or no charge or charity as payment sources. The individual self-pay and no charge or charity categories are not mutually exclusive.

NOTE: Numbers may not add to totals because of rounding.

Table 8. Initial blood pressure measurements recorded at emergency department visits for adults, by selected patient characteristics: United States, 2008

Patient characteristic	Number of visit in thousands	Initial blood pressure[1]						
		Total	Low	Normal	Mildly high	Moderately high	Severely high	Blank

. . . Category not applicable.

[1]Blood pressure (BP) levels were categorized using the following hierarchical definitions. Severely high BP is defined as 160 mm Hg systolic or above, or 100 mm Hg diastolic or above. Moderately high BP is defined as 140–159 mm Hg systolic or 90–99 mm Hg diastolic. Mildly high BP is defined as 120–139 mm Hg systolic or 80–89 mm Hg diastolic. Low BP is defined as less than 100 mm Hg systolic or less than 60 mm Hg diastolic. Normal BP is defined as 100–119 mm Hg systolic and 60–79 mm Hg diastolic. BP classification was based on the "Seventh Report of the Joint National Committee on Prevention, Detection, Evaluation and Treatment of High Blood Pressure" (JNC-7). "Mildly high" BP corresponds to the JNC-7 prehypertensive range. "Moderately high" BP corresponds to the JNC-7 stage 1 hypertensive range. "Severely high" BP corresponds to the JNC-7 stage 2 hypertensive range. (Reference: Chobanian AV, Bokris GL, Black HR, et al. Seventh report of the Joint National Committee on prevention, detection, evaluation, and treatment of high blood pressure. Hypertension 42:1206–52. 2003.)

[2]Visits by adults (18 years and over). Visits where blood pressure was recorded represent 95.7 percent (SE = 0.4) of all emergency department visits made by adults.

[3]Other race includes visits by Asian, Native Hawaiian or other Pacific Islander, American Indian or Alaska Native, and persons with more than one race. All race categories may include visits by persons of Hispanic origin and not Hispanic origin. Persons of Hispanic origin may be of any race. Starting with data year 1999, race-specific estimates have been tabulated according to 1997 standards for federal data on race and ethnicity and are not strictly comparable with estimates for earlier years. The percent of visit records with multiple races indicated is small and lower than what is typically found for self-reported race in household surveys.

[4]For 2008, race data were missing for 16.0 percent of visits by adults, and ethnicity data were missing for 27.7 percent of visits by adults. Readers are therefore advised to treat these data with caution. In this table, estimates based on imputed race and ethnicity data are shown separately from comparison estimates using unimputed data. Missing race and ethnicity were imputed using a hot deck approach rather than the previously used cold deck strategy. The imputation process is described more fully in the 2008 public use file documentation (http://www.cdc.gov/nchs/ahcd.htm). Research is currently under way to evaluate further changes to the imputation strategy for use with 2009 data.

[5]"Reported plus imputed" includes race that was reported directly by emergency departments and imputed values for the 15.0 percent of visits for which race was not reported.

[6]"Reported only" calculations are based on 81,470,000 visits by adults with race reported directly by emergency departments. The visits for which race was missing are excluded from the denominator so that readers can compare differences between estimates that include and exclude imputed race values.

[7]"Reported plus imputed" includes ethnicity that was reported directly by emergency departments and imputed values for the 28.0 percent of visits for which ethnicity was not reported.

[8]"Reported only" calculations are based on 69,010,000 visits with ethnicity reported directly by emergency departments. The visits for which ethnicity was missing are excluded from the denominator so that readers can compare differences between estimates that include and exclude imputed ethnicity values.

NOTE: Numbers may not add to totals because of rounding.

Table 9. Initial vital signs and visit history of emergency department visits: United States, 2008

Visit characteristic	Number of visits in thousands	(Standard error of percent)	Percent distribution	(Standard error of percent)
All visits	123,761	(4,918)	100.0	. . .
Temperature				
Febrile: >38.0°C or >100.4°F	6,035	(480)	4.9	(0.3)
Normal: 35.1–38.0°C or 95.1–100.4°F	109,413	(4,385)	88.4	(0.5)
Hypothermic: ≤35.0°C or <95.0°F	485	(68)	0.4	(0.1)
Unknown or blank	7,829	(581)	6.3	(0.4)
Pulse oximetry[1]				
95–100%	87,861	(4,011)	71.0	(1.7)
90–94%	6,252	(527)	5.1	(0.3)
<90%	3,748	(994)	3.0	(0.8)
Unknown or blank	25,901	(2,030)	20.9	(1.5)
Oriented to time, place, and person				
Yes	92,084	(3,729)	74.4	(1.5)
No	2,665	(194)	2.2	(0.1)
Unknown or blank	29,012	(2,490)	23.4	(1.6)
Presenting level of pain				
None	25,041	(1,368)	20.2	(0.7)
Mild	15,381	(925)	12.4	(0.6)
Moderate	27,215	(1,335)	22.0	(0.7)
Severe	28,275	(1,609)	22.8	(0.8)
Unknown or blank	27,849	(2,002)	22.5	(1.4)
Episode of care				
Initial visit	100,600	(4,494)	81.3	(1.4)
Follow-up visit	8,159	(621)	6.6	(0.4)
Unknown or blank	15,003	(1,710)	12.1	(1.4)
Patient seen in this emergency department within the last 72 hours				
Yes	4,199	(289)	3.4	(0.2)
No	93,189	(4,632)	75.3	(2.3)
Unknown or blank	26,373	(3,112)	21.3	(2.4)
Patient discharged from any hospital within the last 7 days				
Yes	2,800	(266)	2.3	(0.2)
No	63,033	(4,466)	50.9	(3.0)
Unknown or blank	57,928	(4,564)	46.8	(3.1)

. . . Category not applicable.

[1]Normal oxygen saturation as measured by pulse oximetry is 95% or more. An oxygen saturation less than 90% is consistent with severe hypoxemia.

NOTE: Numbers may not add to totals because of rounding.

Table 10. Ten leading principal reasons for emergency department visits, by patient age and sex: United States, 2008

Principal reason for visit and RVC code[1]	Number of visits in thousands	(Standard error of percent)	Percent distribution	(Standard error of percent)
All visits . . .	123,761	(4,918)	100.0	. . .
All visits, under age 15 years . . .	23,157	(1,658)	100.0	. . .
Female . . .	10,395	(803)	44.9	(0.8)

[1]Based on the *International Classification of Diseases, Ninth Revision, Clinical Modification* (ICD–9–CM) (U.S. Department of Health and Human Services. Centers for Medicare and Medicaid Services. Official version: International Classification of Diseases, Ninth Revision, Clinical Modification, Sixth Edition. DHHS Pub No. (PHS) 06–1260). However, certain codes have been combined in this table to better describe the utilization of ambulatory care services.

[2]Includes all other diagnoses not listed above, as well as unknown and blank diagnoses.

NOTE: Numbers may not add to totals because of rounding.

Table 13. Injury-related emergency department visits, by selected patient and hospital characteristics: United States, 2008

Selected patient and hospital characteristics	Number of visits in thousands	(Standard error of percent)	Percent distribution	(Standard error of percent)	Number of visits in thousands	(Standard error of percent)
All injury-related visits[2]	42,420	(1,767)	100.0	. . .	14.2	(0.6)
Patient characteristic						
Age:						
Under 15 years	7,780	(536)	18.3	(0.9)	12.7	(0.9)
Under 1 year	485	(60)	1.1	(0.1)	11.3	(1.4)
1–4 years	2,371	(197)	5.6	(0.4)	14.2	(1.2)

[1]Visit rates for age, sex, race, and region are based on the July 1, 2008, set of estimates of the civilian noninstitutionalized population of the United States as developed by the Population Division, U.S. Census Bureau.

[2]"Injury-related" includes injuries, poisoning, and adverse effects, accounting for 34.3 percent (SE = 0.5) of all visits.

[3]Population estimates by metropolitan statistical area status are based estimates of the civilian noninstitutionalized population of the United States as of July 1, 2008, from the 2008 National Health Interview Survey, National Center for Health Statistics, compiled according to the November 2007 Office of Management and Budget definitions of core-based statistical areas.
See http://www.census.gov/population/www/estimates/metrodef.html for more about metropolitan statistical area definitions.

[4]MSA is metropolitan statistical area.

NOTE: Numbers may not add to totals because of rounding.

Table 14. Injury-related emergency department visits, by race and age, and ethnicity: United States, 2008

* Figure does not meet standards of reliability or precision.

[1]Visit rates are based on the July 1, 2008, estimates of the civilian noninstitutionalized population of the United States as developed by the Population Division, U.S. Census Bureau.

[2]"Injury-related" includes injuries, poisoning, and adverse effects, accounting for 34.3 percent (SE = 0.5) of all visits.

[3]The race groups white, black or African American, Asian, Native Hawaiian or other Pacific Islander, American Indian or Alaska Native, and multiple races, include persons of Hispanic and not Hispanic origin. Persons of Hispanic origin may be of any race. Starting with data year 1999, race-specific estimates have been tabulated according to 1997 standards for federal data on race and ethnicity and are not strictly comparable with estimates for earlier years. The percent of visit records with multiple races indicated is small and lower than what is typically found for self-reported race in household surveys.

[4]For 2008, race data were missing for 16.0 percent of visits, and ethnicity data were missing for 27.7 percent of visits. Readers are therefore advised to treat these data with caution. In this table, estimates based on imputed race and ethnicity data are shown separately from comparison estimates using unimputed data. Missing race and ethnicity were imputed using a hot deck approach rather than the previously used cold deck strategy. The imputation process is described more fully in the 2008 public use file documentation (http://www.cdc.gov/nchs/ahcd.htm). Research is currently under way to evaluate further changes to the imputation strategy for use with 2009 data.

[5]"Reported plus imputed" includes race reported by emergency departments and imputed values for the 15.8% of injury-related visits for which race was not reported.

[6]"Reported only" calculations are based on 35,708,000 injury-related visits with race reported directly by emergency departments. The visits for which race was missing are excluded from the denominator so that readers can compare differences between estimates that include and exclude imputed race values.

[7]"Reported plus imputed" includes ethnicity reported by emergency departments and imputed values for the 28.0% of injury-related visits for which ethnicity was not reported.

[8]"Reported only" calculations are based on 30,550,000 visits with ethnicity reported directly by emergency departments. The visits for which ethnicity was missing are excluded from the denominator so that readers can compare differences between estimates that include and exclude imputed ethnicity values.

NOTE: Numbers may not add to totals because of rounding.

Table 15. Injury-related emergency department visits, by intent: United States, 2008

Intent and mechanism[1]	Number of visits in thousands	(Standard error in thousands)	Percent distribution	(Standard error of percent)
All injury-related visits	42,420	(1,767)	100.0	. . .
Unintentional injuries	28,385	(1,279)	66.9	(0.8)
Falls	9,658	(484)	22.8	(0.5)
Motor vehicle traffic	3,942	(247)	9.3	(0.4)
Struck against or struck accidentally by objects or persons	3,128	(207)	7.4	(0.4)
Cutting or piercing instruments or objects	2,334	(166)	5.5	(0.3)
Overexertion and strenuous movements	1,993	(137)	4.7	(0.3)
Natural and environmental factors	1,762	(148)	4.2	(0.3)
Poisoning	695	(84)	1.6	(0.2)
Foreign body	649	(59)	1.5	(0.1)
Caught accidentally in or between objects	571	(76)	1.3	(0.2)
Pedal cycle, nontraffic	442	(58)	1.0	(0.1)
Fire and flames, hot substances or object, caustic or corrosive material and steam	431	(59)	1.0	(0.1)
Motor vehicle, nontraffic and other	429	(54)	1.0	(0.1)
Machinery	278	(43)	0.7	(0.1)
Other transportation	184	(31)	0.4	(0.1)
Suffocation	151	(27)	0.4	(0.1)
Other mechanism[2]	1,708	(144)	4.0	(0.3)
Mechanism unspecified	*	. . .	*	. . .
Intentional injuries	2,533	(154)	6.0	(0.3)
Assault	1,806	(132)	4.3	(0.3)
Unarmed fight or brawl, striking by blunt or thrown object	1,167	(113)	2.8	(0.2)
Cutting or piercing instrument	136	(30)	0.3	(0.1)
Other and unspecified mechanism[3]	503	(53)	1.2	(0.1)
Self-inflicted	666	(78)	1.6	(0.2)
Poisoning by solid or liquid substances, gases, and vapors	449	(58)	1.1	(0.1)
Other and unspecified mechanism[4]	217	(39)	0.5	(0.1)
Other causes of violence	*	. . .	*	. . .
Injuries of undetermined intent	420	(59)	1.0	(0.1)
Adverse effects of medical treatment	1,980	(148)	4.7	(0.3)
Medical and surgical complications	1,184	(100)	2.8	(0.2)
Adverse drug effects	796	(85)	1.9	(0.2)

[1]Public Health Service and Health Care Financing Administration. International Classification of Diseases, ninth revision, clinical modification, 6th ed. (ICD–9–CM). Washington: Public Health Service. 2004. A detailed description of the Barell Injury Diagnosis Matrix: Classification by Region of Body and Nature of the Injury can be found at: http://www.cdc.gov/nchs/injury_tools.htm. Three additional categories were added that were not in the Barell Injury Diagnosis Matrix, to account for all injury-related visits: illness diagnoses, supplementary classification, and other adverse effects and medical complications.

[2]All other diagnoses include musculoskeletal system (710–739), symptoms and ill-defined conditions (780–799), skin and subcutaneous tissue (680–709), mental disorders (290–319), nervous system and sense organs (320–389), other illnesses (001–289, 390–677, 740–779), and supplementary classification (V01-V82).

[3]Category includes blank, uncodable, and illegible diagnoses.

NOTE: Numbers may not add to totals because of rounding.

Table 17. Selected diagnostic and screening services ordered or provided at emergency department visits: United States, 2008

Diagnostic and screening service ordered or provided	Number of visits in thousands	(Standard error in thousands)	Percent of visits	(Standard error of percent)
All visits	123,761	(4,918)	. . .	. . .
One or more diagnostic or screening service listed	83,922	(3,525)	67.8	(0.8)
None	37,572	(1,762)	30.4	(0.8)
Blank	2,267	(286)	1.8	(0.2)

. . . Category not applicable.

0.0 Quantity more than zero but less than 0.05.

[1]Combined total of services exceeds ''all visits,'' and percent of visits exceeds 100%, because more than one service may be reported per visit.

[2]Based on N = 67,019,620 female visits.

Table 18. Selected procedures at emergency department visits: United States, 2008

Procedure performed	Number of visits in thousands	(Standard error in thousands)	Percent of visits	(Standard error of percent)
All visits	123,761	(4,918)	. . .	. . .
One or more procedure listed	57,300	(2,729)	46.3	(1.3)
None[2]	61,329	(2,958)	49.6	(1.3)
Blank[3]	5,133	(537)	4.1	(0.4)
Intravenous fluids	32,950	(1,726)	26.6	(0.9)
Splint or wrap	7,071	(416)	5.7	(0.3)
Laceration repair	5,486	(309)	4.4	(0.2)
Nebulizer therapy	3,556	(295)	2.9	(0.2)
Bladder catheter	2,631	(221)	2.1	(0.2)
Wound debridement	1,862	(232)	1.5	(0.2)
Incision and drainage	1,437	(126)	1.2	(0.1)
Foreign body removal	569	(73)	0.5	(0.1)
Cast	422	(63)	0.3	(0.0)
Nasogastric tube/gastric suction	406	(82)	0.3	(0.1)
Endotracheal intubation	234	(50)	0.2	(0.0)
Cardiopulmonary resuscitation	119	(30)	0.1	(0.0)
Other	11,723	(1,796)	9.5	(1.4)

. . . Category not applicable.

0.0 Quantity more than zero but less than 0.05.

[1]Combined total of procedures exceeds "all visits," and percent of visits exceeds 100%, because more than one procedures may be reported per visit.

[2]The "none" checkbox was marked on the Patient Record form (PRF).

[3]No checkboxes were marked on PRF.

Table 19. Medication therapy and number of medications mentioned at emergency department visits: United States, 2008

Medication therapy[1]	Number of visits in thousands	(Standard error in thousands)	Percent distribution	(Standard error of percent)
All visits	123,761	(4,918)	100.0	. . .
Visits with mention of medication[2]	96,419	(4,034)	77.9	(0.7)
Number of medications provided or prescribed[3]:				
1	31,749	(1,338)	25.7	(0.5)
2	26,925	(1,090)	21.8	(0.3)
3	17,789	(889)	14.4	(0.4)
4	9,897	(590)	8.0	(0.3)
5	4,845	(311)	3.9	(0.2)
6	2,440	(224)	2.0	(0.1)
7	1,316	(152)	1.1	(0.1)
8	1,460	(268)	1.2	(0.2)
Visits without mention of medication	27,343	(1,307)	22.1	(0.7)

. . . Category not applicable.

[1]Includes prescription drugs, over-the-counter preparations, immunizations, and desensitizing agents.

[2]Visits at which one or more medications were provided or prescribed.

[3]There were 238,301,000 drug mentions at emergency department visits in 2008. The average drug mention rate was 1.9 drug mentions per emergency department visit (SE = 0.04). For visits with at least one drug mention, the average drug visit rate was 2.5 drugs per visit (SE = 0.04).

NOTE: Numbers may not add to totals because of rounding.

Table 20. Twenty most frequently mentioned drugs by therapeutic drug categories at emergency department visits: United States, 2008

Drug category[1]	Number of occurrence in thousands	(Standard error in thousands)	Percent of drug mentions[2,3]	(Standard error of percent)
Analgesics[3]	85,473	(4,265)	35.9	(0.5)
Antiemetic or antivertigo agents	26,798	(1,440)	11.2	(0.3)
Antihistamines	12,075	(699)	5.1	(0.2)
Anxiolytics, sedatives, and hypnotics	10,353	(574)	4.3	(0.1)
Minerals and electrolytes	10,301	(951)	4.3	(0.3)
Bronchodilators	8,572	(661)	3.6	(0.2)
Cephalosporins	7,806	(410)	3.3	(0.1)
Penicillins	7,444	(405)	3.1	(0.1)
Miscellaneous respiratory agents	7,191	(851)	3.0	(0.3)
Adrenal cortical steroids	7,160	(422)	3.0	(0.1)
Miscellaneous antibiotics	6,803	(390)	2.9	(0.1)
Anticonvulsants	6,102	(395)	2.6	(0.1)
Quinolones	5,402	(338)	2.3	(0.1)
Macrolide derivatives	4,282	(265)	1.8	(0.1)
Dermatological agents	4,210	(304)	1.8	(0.1)
Antiplatelet agents	4,097	(325)	1.7	(0.1)
Muscle relaxants	3,777	(289)	1.6	(0.1)
Antiparkinson agents	3,741	(261)	1.6	(0.1)
Antiarrhythmic agents	3,714	(245)	1.6	(0.1)
Local injectable anesthetics	3,328	(250)	1.4	(0.1)

[1]Based on Multum Lexicon second-level therapeutic drug category (see: http://www.multum.com/Lexicon.htm).

[2]Based on an estimated 238,301,000 drug mentions at emergency department visits in 2008.

[3]Mentions refers to drugs provided or prescribed.

[3]Includes narcotic and nonnarcotic analgesics and nonsteroidal anti-inflammatory drugs.

Table 21. Twenty most frequently mentioned drug names at emergency department visits: United States, 2008

					Percent of mentions[1] (standard error of percent)			
Drug name[1]	Number of visits in thousands	(Standard error in thousands)	Percent distribution	(Standard error of percent)	Given in emergency department	Prescribed at discharge	Unknown[3]	Therapeutic drug category[3]
All drug mentions	238,341	(11,365)	100.0	. . .	64.2 (1.0)	43.6 (1.1)	2.1 (0.4)	. . .
Ibuprofen	17,000	(1,025)	7.1	(0.3)	3.3 (0.2)	4.7 (0.2)	*0.2 (0.1)	Analgesics
Acetaminophen-hydrocodone . . .	14,466	(926)	6.1	(0.3)	2.2 (0.1)	4.9 (0.2)	*0.1 (0.0)	Analgesics
Acetaminophen	11,333	(724)	4.8	(0.2)	2.8 (0.1)	2.3 (0.2)	*0.1 (0.1)	Analgesics
Ondansetron	9,382	(621)	3.9	(0.2)	3.7 (0.2)	0.5 (0.0)	*0.1 (0.0)	Antiemetic or antivertigo agents
Ketorolac	7,630	(413)	3.2	(0.1)	3.0 (0.1)	0.3 (0.0)	0.0 (0.0)	Analgesics
Morphine	7,097	(485)	3.0	(0.2)	2.9 (0.2)	0.1 (0.0)	*0.1 (0.0)	Analgesics
Sodium chloride	7,065	(846)	3.0	(0.3)	2.9 (0.3)	0.0 (0.0)	0.1 (0.0)	Minerals and electrolytes or miscellaneous respiratory agents
Promethazine	6,913	(484)	2.9	(0.2)	2.2 (0.1)	1.0 (0.1)	*0.0 (0.0)	Antiemetic or antivertigo agents or antihistamines
Hydromorphone	5,711	(518)	2.4	(0.2)	2.3 (0.2)	0.1 (0.0)	0.0 (0.0)	Analgesics
Acetaminophen-oxycodone	5,258	(533)	2.2	(0.2)	1.0 (0.1)	1.6 (0.1)	*0.0 (0.0)	Analgesics
Albuterol.	5,000	(406)	2.1	(0.1)	1.4 (0.1)	1.1 (0.1)	0.0 (0.0)	Bronchodilators
Azithromycin	3,828	(253)	1.6	(0.1)	0.7 (0.0)	1.1 (0.1)	*0.0 (0.0)	Macrolide derivatives
Aspirin	3,696	(289)	1.6	(0.1)	1.4 (0.1)	*0.2 (0.1)	*0.0 (0.0)	Analgesics or antiplatelet agents
Diphenhydramine	3,586	(249)	1.5	(0.1)	1.1 (0.1)	0.6 (0.0)	*0.0 (0.0)	Antiemetic or antivertigo agents or antihistamines or antiparkinson agents or anxiolytics, sedatives, and hypnotics
Amoxicillin.	3,564	(276)	1.5	(0.1)	0.3 (0.0)	1.4 (0.1)	*0.0 (0.0)	Penicillins
Ceftriaxone	3,284	(210)	1.4	(0.1)	1.3 (0.1)	0.1 (0.0)	*0.0 (0.0)	Cephalosporins
Sulfamethoxazole-trimethoprim . .	3,154	(222)	1.3	(0.1)	0.4 (0.0)	1.1 (0.1)	*0.0 (0.0)	Miscellaneous antibiotics or sulfonamides
Cephalexin	3,084	(215)	1.3	(0.1)	0.4 (0.0)	1.1 (0.1)	*0.0 (0.0)	Cephalosporins
Lorazepam	3,071	(233)	1.3	(0.1)	1.1 (0.1)	0.2 (0.0)	*0.0 (0.0)	Anticonvulsants; antiemetic or antivertigo agents; or anxiolytics, sedatives, and hypnotics"
Methylprednisolone	2,889	(216)	1.2	(0.1)	0.9 (0.1)	0.3 (0.0)	*0.0 (0.0)	Adrenal cortical steroids
All other	111,329	(5,528)	46.7	(0.6)	29.0 (0.5)	20.8 (0.7)	1.1 (0.2)	

. . . Category not applicable.

* Figure does not meet standards of reliability or precision.

0.0 Quantity more than zero but less than 0.05.

[1]Mentions refers to drugs provided or prescribed.

[2]Based on Multum Lexicon terminology, drug name reflects the active ingredients of a drug mention.

[3]Unknown includes drugs provided or prescribed that did not have either the "given in ED" or "prescribed at discharge" check boxes marked.

[4]Based on Multum Lexicon second-level therapeutic drug category (see: http://www.multum.com/lexicon.htm).

Table 22. Providers seen at emergency department visits: United States, 2008

Type of provider	Number of visits in thousands	(Standard error in thousands)	Percent of visits	(Standard error of percent)
All visits	123,761	(4,918)	. . .	. . .
Registered nurse or licensed practical nurse	114,299	(4,819)	92.4	(1.0)
Any physician	111,248	(4,411)	89.9	(0.8)
Emergency department attending physician	107,038	(4,380)	86.5	(1.3)
Emergency department resident or intern	12,003	(1,683)	9.7	(1.3)
Other on-call attending physician, fellow, or resident	5,898	(855)	4.8	(0.7)
Physician assistant	10,765	(1,265)	8.7	(0.9)
Emergency medical technican	10,730	(1,365)	8.7	(1.1)
Nurse practitioner	4,450	(546)	3.6	(0.4)
Other	32,775	(2,657)	26.5	(2.0)
Blank	1,435	(183)	1.2	(0.1)

. . . Category not applicable.

[1]Combined total of providers seen exceeds ''all visits,'' and percent of visits exceeds 100%, because more than one provider may be reported per visit.

Table 23. Dispostion of emergency department visits: United States, 2008

Disposition	Number of visits in thousands	(Standard error in thousands)	Percent of visits	(Standard error of percent)
All visits	123,761	(4,918)	. . .	. . .
Admitted, transferred, or died				
Admitted to hospital	16,559	(1,021)	13.4	(0.6)
Step-down or telemetry unit	3,217	(298)	2.6	(0.2)
Critical care unit[2]	2,124	(261)	1.7	(0.2)
Operating room	716	(90)	0.6	(0.1)
Mental health or detoxification unit	603	(85)	0.5	(0.1)
Cardiac catheterization lab	176	(34)	0.1	(0.0)
Other bed or unit	7,242	(497)	5.9	(0.4)
Unknown or blank	2,481	(454)	2.0	(0.3)
Admitted to observation unit	2,318	(234)	1.9	(0.2)
Transferred to different hospital	2,095	(178)	1.7	(0.1)
Died in emergency department	139	(31)	0.1	(0.0)
Outpatient follow-up				
Returned or referred to physician or clinic for follow-up	79,916	(3,557)	64.6	(1.2)
Returned to emergency department as needed or by appointment	43,661	(2,776)	35.3	(2.0)
No follow-up planned	6,266	(800)	5.1	(0.6)
Referred to social services	1,037	(125)	0.8	(0.1)
Left or referred out from triage				
Left before medical screening exam	2,014	(206)	1.6	(0.1)
Left after medical screening exam	1,275	(175)	1.0	(0.1)
Left against medical advice	1,255	(111)	1.0	(0.1)
Other	861	(164)	0.7	(0.1)
Blank	792	(151)	0.6	(0.1)

. . .Category not applicable.

0.0 Quantity more than zero but less than 0.05.

[1]Combined total of dispositions exceeds "all visits," and percent of visits exceeds 100%, because more than one disposition may be reported per visit.

[2]Critical care units include intensive care and coronary care units.

Table 24. Emergency department visits resulting in hospital admission, by selected patient and visit characteristics: United States, 2008

Selected characteristic	Number of visits in thousands	(Standard error in thousands)	Percent of visits	(Standard error of percent)	Mean length of stay in days[1]	(Standard error in days)	Admissions as percent of visits	(Standard error of percent)
All admissions	16,559	(1,021)	100.0	. . .	5.5	(0.2)	13.4	(0.0)
Age								
Under 15 years	816	(117)	4.9	(0.6)	4.0	(0.4)	3.5	(0.6)
15–24 years	823	(85)	5.0	(0.5)	4.2	(0.2)	4.2	(0.4)
25–24 years	2,838	(229)	17.1	(0.8)	5.2	(0.3)	8.1	(0.5)
45–64 years	4,939	(353)	29.8	(0.9)	5.2	(0.2)	18.8	(1.0)

9–10 days	636	(70)	3.8	(0.4)	. . .	. . .	. . .	. . .
More than 10 days	1,324	(133)	8.0	(0.6)	. . .	. . .	. . .	. . .
Unknown or blank	1,906	(351)	11.5	(1.9)	. . .	. . .	. . .	. . .
Hospital discharge status								
Alive	14,063	(887)	85.0	(1.9)	5.4	(0.2)	. . .	. . .
Home or residence	11,449	(770)	81.4	(1.7)	5.1	(0.1)	. . .	. . .
Transferred to another hospital	1,058	(135)	7.5	(0.8)	7.3	(0.5)	. . .	. . .
Other	771	(109)	5.5	(0.7)	7.4	(0.5)	. . .	. . .
Unknown or blank	785	(171)	5.6	(1.2)	5.3	(0.6)	. . .	. . .
Died	376	(52)	2.3	(0.3)	8.8	(0.9)	. . .	. . .
Unknown or blank	2,120	(358)	12.8	(1.9)	5.9	(0.7)	. . .	. . .

. . . Category not applicable.

0.0 Quantitiy more than zero but less than 0.05.

[1]Denominator for length of stay is 14,653,000 visits where this variable was known. Length of stay was unknown in 11.5 percent of visits resulting in admission.

[2]Combined total exceeds "all admissions," and percent of visits exceeds 100%, because more than one source of payment may be reported per visit. Workers' compensation, other, and unknown sources of payment are not included in this table but account for 8.7 percent of expected sources of payment.

[3]SCHIP is State Children's Health Insurance Program.

[4]No insurance is defined as having only self-pay, or no charge or charity as payment sources.

[5]Emergent is needing to be seen within 1–14 minutes.

NOTE: Numbers may not add to totals because of rounding.

Table 25. Twenty leading principal hospital discharge diagnosis groups for emergency department visits: United States, 2008

Principal diagnosis group and ICD–9–CM code(s)[1]	Number of visits in thousands	(Standard error in thousands)	Percent distribution	(Standard error of percent)
All visits . . .	16,559	(1,021)	100.0	. . .
Heart disease, excluding ischemic . . . 391–392.0,393–398,402,404,415–416,420–429	1,001	(93)	6.0	(0.5)
Chest pain . . . 786.5	888	(99)	5.4	(0.5)
Pneumonia . . . 480–486	673	(76)	4.1	(0.4)
Ischemic heart disease . . . 410–414.9	445	(63)	2.7	(0.3)
Cerebrovascular disease . . . 430–438	443	(56)	2.7	(0.3)
Malignant neoplasms . . . 140–208,230–234	345	(55)	2.1	(0.3)
Psychoses, excluding major depressive disorder . . . 290–295,296.0–296.1,296.4–299	315	(49)	1.9	(0.3)
Asthma . . . 493	299	(59)	1.8	(0.3)
Cellulitis and abscess . . . 681–682	298	(41)	1.8	(0.2)
Gastrointestinal hemmorhage . . . 578	291	(54)	1.8	(0.3)
Urinary tract infection, site not specified . . . 599.0	288	(50)	1.7	(0.3)
Chronic and unspecified bronchitis . . . 490–491	283	(41)	1.7	(0.2)
Fracture of the lower limb . . . 820–829	264	(42)	1.6	(0.2)
Abdominal pain . . . 789.0	262	(61)	1.6	(0.4)
Syncope and collapse . . . 780.2	250	(39)	1.5	(0.2)
Diabetes mellitus . . . 250	242	(41)	1.5	(0.2)
Anemia . . . 280–285	217	(37)	1.3	(0.2)
Dyspnea and respiratory abnormalities . . . 786.0	194	(40)	1.2	(0.2)
Noninfectious entertis and colitis . . . 555–558	194	(32)	1.2	(0.2)
Fractures, excluding lower limb . . . 800–819	190	(34)	1.1	(0.2)
All other diagnoses[2] . . .	9,176	(636)	55.4	(1.3)

. . . Category not applicable.

[1]Based on the International Classification of Diseases, Ninth Revision, Clinical Modification (ICD–9–CM)(U.S. Department of Health and Human Services. Centers for Medicare and Medicaid Services. Official version: International Classification of Diseases, Ninth Revision, Clinical Modification, Sixth Edition. DHHS Pub No. (PHS) 06–1260). However, certain codes have been combined in this table to better describe the utilization of ambulatory care services.

[2]All other diagnoses include blanks and the 15.5 percent of hospital discharges where the discharge diagnosis was unknown or blank.

NOTE: Numbers may not add to totals because of rounding.

Table 26. Visit volume and metropolitan status of emergency department visits, by selected characteristics: United States 2008

Hospital and ED characteristics	ED[1] annual visit volume								Metropolitan status			
	Total[2]		Fewer than 20,000		20,000 to 50,000		50,000 or more		Metropilitan statistical area		Not a metropolitan statistical area	
	Percent distribution	(Standard error of percent)	Percent distribution	(Standard error of percent)	Percent distribution	(Standard error of percent)	Percent distribution	(Standard error of percent)	Percent distribution	(Standard error of percent)	Percent distribution	(Standard error of percent)

. . . Category not applicable.

0 Quantity equals zero.

0.0 Quantity more than zero, but less than 0.05.

* Figure does not meet standards of reliability or precision. Only an asterisk (*) appears in the table if the estimates for the entire category are based on fewer than 30 cases in the sample data. Estimates based on 30 or more cases include an asterisk if the relative standard error of the estimate exceeds 30 percent.

[1]ED is emergency department.

[2]Number of sampled records: all EDs (N = 331); less than 20,000 (N = 68); 20,000–50,000 (N = 140); 50,000 or more (N = 123); metropolitan area (N = 279); and not a metropolitan area (N = 52).

[3]Denominator is number of EDs with observation or clinical decision units.

[4]Denominator is number of emergency departments that did not expand their physical space in the last 2 years.

[5]An electronic dashboard displays updated patient information and integrates multiple data sources.

[6]Radio frequency identification tracking shows the exact location of patients, caregivers, and equipment.

[7]Zone nursing refers to all of a nurse's patients being located in one area.

[8]Pool nurses are those that can be pulled to the ED to respond to surges in demand.

[9]A full capacity protocol allows some admitted patients to move from the emergency department to inpatient corridors while awaiting a bed.

Abstract

Objectives

This report presents statistics on ambulatory care visits to physician offices, hospital outpatient departments (OPDs), and hospital emergency departments (EDs) in the United States in 2007. Ambulatory medical care utilization is described in terms of patient, provider, and visit characteristics.

Methods

Data from the 2007 National Ambulatory Medical Care Survey and National Hospital Ambulatory Medical Care Survey were combined to produce annual estimates of ambulatory medical care utilization.

Results

Patients in the United States made an estimated 1.2 billion visits to physician offices and hospital OPDs and EDs, a rate of 405.0 visits per 100 persons annually. This was not significantly different than the rate of 381.9 visits per 100 persons in 2006, neither were significant differences found in overall visit rates by age, sex, or geographic region. Visit distribution by ambulatory care setting differed by poverty level in the patient's ZIP Code of residence, with higher proportions of visits to hospital OPDs and EDs as poverty levels increased. Between 1997 and 2007, the age-adjusted visit rate increased by 11 percent, fueled mainly by a 29 percent increase in the visit rate to medical specialty offices. Nonillness and noninjury conditions, such as general and prenatal exams, accounted for the largest percentage of ambulatory care diagnoses in 2007, about 19 per 100 visits. Seven of 10 ambulatory care visits had at least one medication provided, prescribed, or continued in 2007, for a total of 2.7 billion drugs overall. These were not significantly different than 2006 figures. Analgesics were the most common therapeutic category, accounting for 13.1 drugs per 100 drugs reported, and were most often utilized at primary care and ED visits. The number of viral vaccines that were ordered or provided increased by 79 percent, from 33.2 million occurrences in 2006 to 59.3 million in 2007; significant increases were also noted for anticonvulsants and antiemetics.

Ambulatory Medical Care Utilization Estimates for 2007

by Susan M. Schappert, M.A., and Elizabeth A. Rechtsteiner, M.S., Division of Health Care Statistics

Introduction

This report presents summary information on the utilization of ambulatory medical care across physician offices and hospital emergency departments (EDs) and outpatient departments (OPDs). Physician offices are further classified by the physician specialty: primary care, surgical, and medical. The tables present total visits across all settings as well as percent distributions by setting type. Data are from the National Ambulatory Medical Care Survey (NAMCS) and the National Hospital Ambulatory Medical Care Survey (NHAMCS), which are part of the ambulatory care component of the National Health Care Surveys, a family of provider-based surveys conducted by the Centers for Disease Control and Prevention's (CDC) National Center for Health Statistics (NCHS).

Methods

Individual reports are available that contain detailed methods and analyses by setting: physician offices (1), OPDs (2), and EDs (3). A brief overview of NAMCS and NHAMCS methodology, highlighting issues of concern to this report, is presented below.

Data Source

The estimates of ambulatory medical care use presented in this report are based on a national probability sample survey of visits to nonfederal office-based physicians (NAMCS), and a national probability sample survey of the emergency and outpatient departments of nonfederal general and short-stay hospitals in the 50 states and District of Columbia (NHAMCS). These reports, issued annually, provide a comprehensive analysis of visits to ambulatory health care settings in the United States. Estimates of visits are made from a sample of medical record abstracts from each sampled provider during defined reporting periods, weighted to provide national annual estimates. More information on the sampling design and scope of the surveys can be found at http://www.cdc.gov/nchs/ahcd.htm.

In 2007, of the 3,540 physicians who were sampled in NAMCS, 2,399 were found to be in scope, or eligible to participate. A total of 1,568 physicians participated, yielding an unweighted response rate of 64.7 percent (64.1 percent weighted). Some physicians did not provide the expected number of visit records, thereby reducing the unweighted total visit response rate to 60.9 percent (60.5 percent weighted). Sampled physicians were asked to complete Patient Record forms (PRFs) for a systematic random sample of approximately 30 office visits occurring during a randomly assigned 1-week reporting period. The total number of PRFs completed for 2007 was 32,778.

For NHAMCS, hospital staffs were asked to complete PRFs for a sample of visits during a 4-week reporting period. Of the 482 hospitals sampled in the 2007 NHAMCS, 384 were in scope and had eligible EDs, and 357 of these EDs responded (ED-level response rate of 93.0 percent unweighted and 92.6 percent weighted for the probability of selection). A total of 438 of the 477 emergency service areas (ESAs) within the participating EDs responded and provided 35,490 PRFs. Of these 438 ESAs, 432 responded fully or adequately by providing at least one-half of their expected forms (ESA-level response rate of 90.6 percent unweighted and 93.1 weighted). The overall response rate, which is the product of the response rates of the EDs and the ESAs, was 84.2 percent unweighted and 86.2 percent weighted.

Of the 482 hospitals selected for the 2007 NHAMCS, 252 were in scope and had eligible OPDs, and 214 of these OPDs responded (OPD-level response rate of 84.9 percent unweighted and 82.5 percent weighted for the probability of selection). A total of 932 of the 1,069 clinics within the participating OPDs responded and provided 34,473 PRFs. Of these 932 clinics, 911 responded fully or adequately by providing at least one-half of their expected forms (clinic-level response rate of 85.2 percent unweighted and 74.4 percent weighted). The overall response rate, which is the product of the response rates of the OPDs and clinics, was 72.4 percent unweighted and 61.3 percent weighted.

Data collection for both surveys was conducted by the U.S. Census Bureau. In many cases, medical providers or their staffs completed the NAMCS and NHAMCS PRFs. However, for 57 percent of physician office visits, 57 percent of ED visits, and 53 percent of OPD visits, data were obtained through Census field staff abstraction of medical records.

Injury Data

The injury data presented in this report were collected using a slightly different format depending on ambulatory care setting. In physician offices and hospital OPDs, injury data were collected using a checkbox item that asked if the visit is related to unintentional injury/poisoning, intentional injury/poisoning, injury/poisoning of unknown intent, adverse effect of medical/surgical care or adverse effect of medicinal drug, or none of the above. In hospital EDs, a yes/no question was asked as to whether the visit is related to injury, poisoning, or adverse effect of medical treatment. Subsequent questions collected data on the intentionality and cause of the injury. For all settings, an additional injury item was created which considered a visit as injury related based on both the specific injury questions as well as the presence of an injury-related reason for visit or provider diagnosis.

Drug Coding

Starting with the 2006 data release, drugs collected in NAMCS and NHAMCS are coded in terms of their generic components and therapeutic classifications using Lexicon Plus, a proprietary database of Cerner Multum, Inc. Lexicon Plus is a comprehensive database of all prescription and some nonprescription drug products available in the U.S. drug market. Because of this change, therapeutic class information presented in this report will not be comparable with years of data prior to 2006, which were coded using the National Drug Code Directory. More information about the Multum Lexicon and how researchers can conduct drug trend analysis with NAMCS and NHAMCS data is available at http://www.cdc.gov/nchs/ahcd.htm. For additional information on the Multum Lexicon Drug Database, please refer to http://www.multum.com/Lexicon.htm.

Race and Ethnicity

Race and ethnicity data were each missing for more than 30 percent of NAMCS records in 2007. Race data were missing for 13 percent of ED and 12 percent of OPD records, while ethnicity data were missing from 19 percent of ED and 21 percent of OPD records. Missing race and ethnicity data were imputed for both surveys using a method that was based, where possible, on diagnosis and patient's locality (ZIP Code or state/county of residence). A hot deck approach (i.e., filling in missing values on incomplete records using values from similar but complete records of the same dataset) was employed starting with 2006 data, except in cases where a matching record could not be obtained from the current data. When race or ethnicity data could not be assigned using patient locality, the method attempted to impute within the same physician office or hospital wherever possible. Failing that, imputation was based on physician specialty and diagnosis (NAMCS) and diagnosis, hospital, and clinic (NHAMCS), and, as a last resort, on a randomly selected record. An internal NCHS evaluation study found that this approach more correctly identified patients' race and ethnicity than did the method used in 2005 and previous years. Further refinements to the imputation strategy are being studied for future use. Because of the high percentages of missing data for race and ethnicity in 2007, statistical comparisons have not been included in the text and readers are advised to use these data with caution. In the tables, both imputed and unimputed race and ethnicity data are presented.

Estimation

Because of the complex multistage design of both NAMCS and NHAMCS, a sample weight is computed for each sample visit that takes all design stages into account. Survey data were inflated or weighted to produce unbiased national annual estimates. The visit weight includes four basic components: inflation by reciprocals of selection probabilities, adjustment for nonresponse, population ratio adjustments, and weight smoothing. These are described in more detail in the references previously cited (1–3).

The standard error is primarily a measure of the sampling variability that occurs by chance because only a sample rather than an entire universe is surveyed. Estimates of the sampling variability for this report were calculated using the Taylor series linearization method in SUDAAN, which takes into account the complex sample design of NAMCS and NHAMCS. A description of the software and its approach has been published (4). The standard errors of statistics presented in this report are included in each of the tables.

Tests of Significance

In this report, the determination of statistical inference is based on the two-tailed *t* test. The Bonferroni inequality was used to establish the critical value for statistically significant differences (0.05 level of significance) based on the number of possible comparisons within a particular variable (or combination of variables) of interest. A weighted least-squares regression analysis was used to determine the significance of trends at the 0.05 level. Chi-square tests to analyze the association between poverty level, educational level, and median household income in the patient's ZIP Code of residence were performed using PROC CROSSTAB in SUDAAN. Terms relating to differences such as ''greater than'' or ''less than'' indicate that the difference is statistically significant. Differences not mentioned may or may not be statistically significant.

Use of Tables

In this report, estimates are not presented if they are based on fewer than 30 cases in the sample data; only an asterisk (*) appears in the tables. The relative standard error (RSE) of an estimate is obtained by dividing the standard error by the estimate itself. The result is then expressed as a percentage of the estimate. Estimates based on 30 or more cases include an asterisk (*) if the RSE of the estimate exceeds 30 percent.

In the tables, estimates of ambulatory care visits have been rounded to the nearest thousand. Consequently, estimates will not always add to totals. Rates and percentages were calculated from original unrounded figures and do not necessarily agree with figures calculated from rounded data. Denominators used in computing estimates of visit rates by expected source of payment were obtained from the 2007 National Health Interview Survey. Population estimates for insurance coverage were recoded from multiple sources to a primary source of coverage using the following hierarchy: Medicare, Medicaid/ SCHIP, Private Insurance, and No Insurance.

Results

There were 1.2 billion visits to physician offices and hospital emergency and outpatient departments in the United States during 2007, a rate of 405.0 visits per 100 persons annually. About one-half of ambulatory medical care visits (48.1 percent) were made to primary care physicians in office-based practices. The rest were to medical specialists (18.4 percent) and surgical specialists (16.4 percent) in office-based practices, and to EDs (9.7 percent) and OPDs (7.4 percent) in nonfederal general and short-stay hospitals (Table 1).

Estimates of ambulatory care visits by patient race and ethnicity are shown separately in Table 2. The race and ethnicity data are presented in two ways: first with missing responses imputed and added to reported data, and second with reported data only (i.e., missing data are shown) (see the ''Methods'' section). This was done so that readers could see the effects of both nonresponse and imputation on the resulting estimates.

Visit rates by selected patient and provider characteristics are shown in Table 3; none differed significantly from 2006 rates. Visit rates for persons with no insurance for the care provided (i.e., expected payment from solely self-pay, no charge, or charity) were lowest for all three office-based settings compared with visit rates for persons with various kinds of insurance. In contrast, the visit rate to EDs for the uninsured (41.6 visits per 100 persons) was about twice the rate of persons with private insurance (19.9 visits per 100 persons).

As shown in Figure 1, from 1997 through 2007, the annual number of ambulatory care visits increased by 25 percent, driven both by the aging of the population, as older persons have higher visit rates than younger persons in general, and by an increase in utilization by older persons. After adjustment for changes in the age distribution of the population between 1997 and 2007, the overall rate of visits increased by 10.6 percent, from 364.3 to 403.1 visits per 100 persons. The age-adjusted rate of visits to office-based medical specialists showed the most significant change, increasing 29.5 percent, from 56.4 visits per 100 persons in 1997 to 73.0 visits per 100 persons in 2007 (Figure 2). Rates of visits to primary care and surgical specialists, and to hospital emergency and outpatient departments, were not

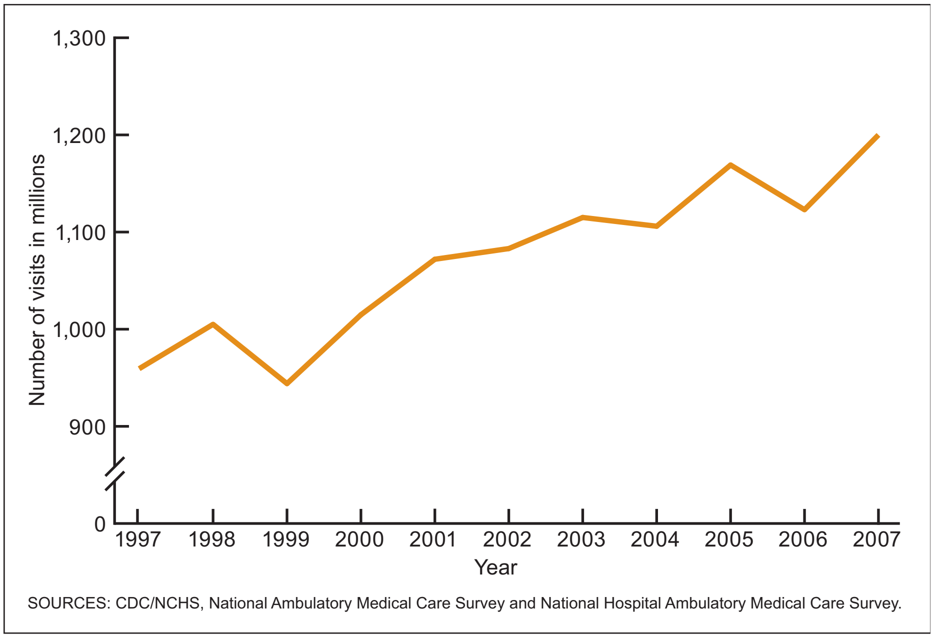

Figure 1. Annual number of ambulatory care visits: United States, 1997–2007

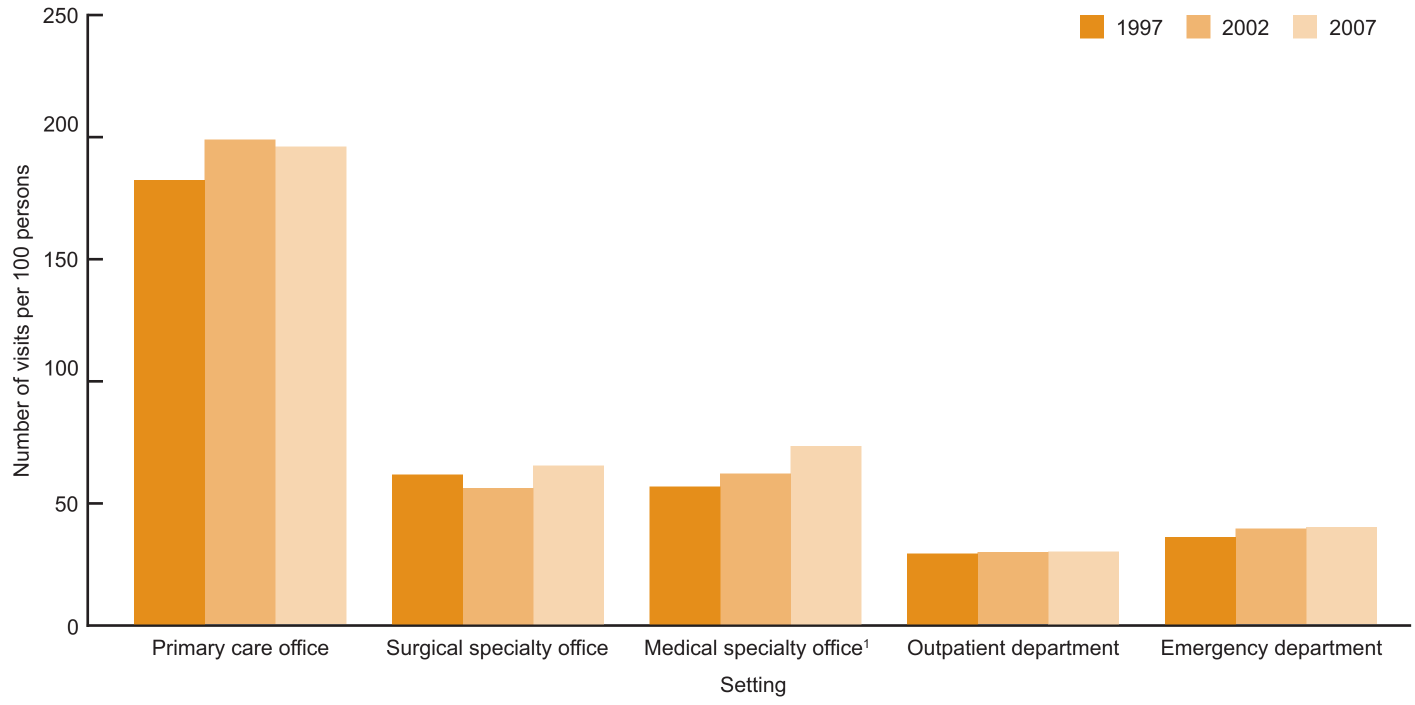

Figure 2. Age-adjusted ambulatory care visit rates by setting: United States, 1997, 2002, and 2007

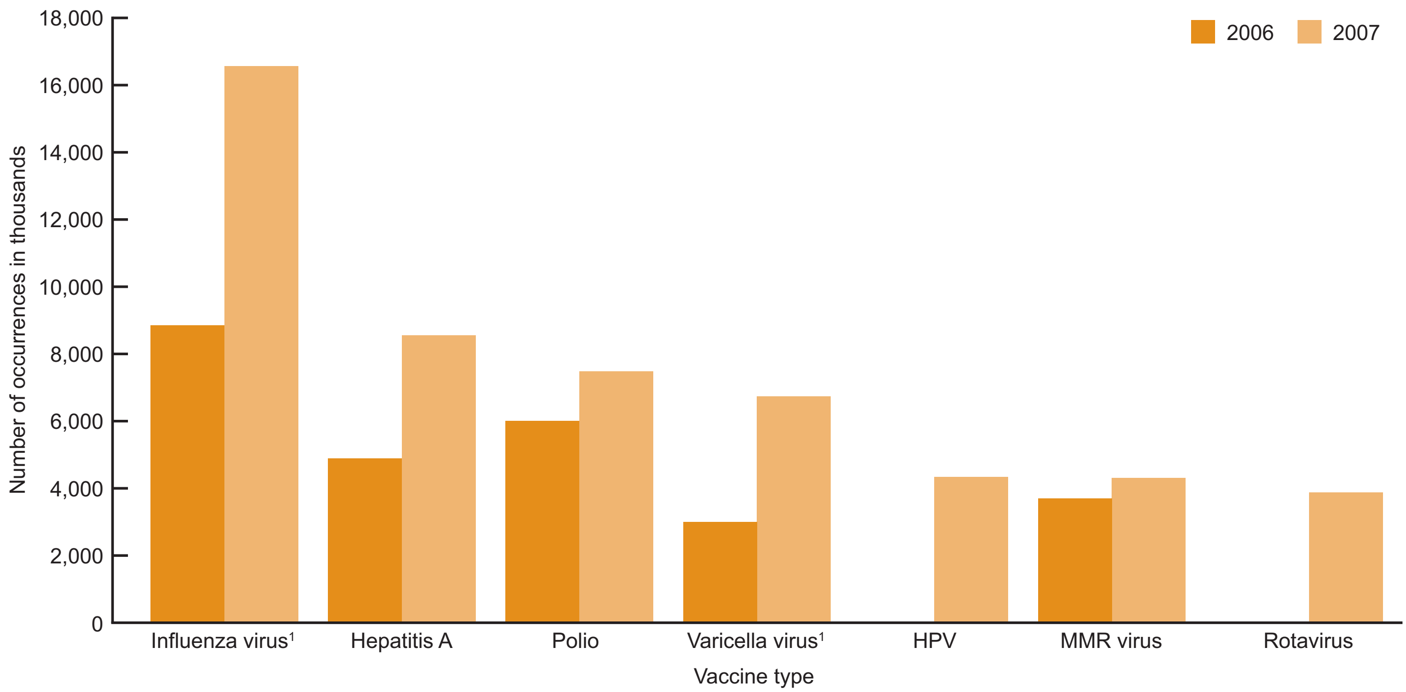
significantly different in 1997, 2002, and 2007. Readers should note that the NAMCS estimator was revised with the 2003 data release, based on new information obtained through the physician induction interview starting in 2001. Data shown subsequent to 2002 in Figures 1 and 2 reflect the new estimator and so are not strictly comparable with data years prior to 2003. This change in the methodology and its effect on NAMCS estimates has been described in greater detail elsewhere (5).

Estimates of ambulatory care visit rates by patient race and ethnicity are shown separately in Table 4. It should be noted that in Table 4, both imputed and unimputed data are provided for those who wish to understand the effects of imputation on the data, or who wish to conduct a complete-case analysis and can use the unimputed columns on the right side of each table for benchmarking purposes. However, the ''best'' estimates of ambulatory care visit rates by race and ethnicity remain those on the left side of each table, which include both reported (known) and imputed data, subject to the caveats discussed in the ''Methods'' section.

The relationship between characteristics of the patient's ZIP Code and the choice of ambulatory care setting is shown in Table 5. For persons living in areas where the poverty level was above 40 percent, 31.8 percent of ambulatory care visits were to hospital OPDs and EDs. (While this would appear to indicate a change from the 2006 figure of 45.8 percent, the difference is not statistically significant.) In contrast, for persons living in areas where the poverty level was less than 5 percent, only 11.0 percent of visits were to hospital outpatient and emergency departments. Ambulatory care setting was significantly associated with poverty level, educational level, and median household income in the patient's ZIP Code of residence. In general, higher levels of education and income and lower levels of poverty were associated with higher proportions of visits to office-based physicians and lower levels of visits to hospital-based ambulatory settings.

Essential hypertension was the primary illness diagnosis recorded most frequently (46.3 million) at ambulatory care visits, or 3.9 percent of the total. Eight out of 10 of these visits (36.6 million) occurred in primary care offices, accounting for 6.3 percent of the 576.6 million visits to this setting in 2007. About one-fifth (19.6 percent) of all ambulatory care visits in 2007 had diagnoses of nonillness or noninjury conditions, such as routine checkups and pregnancy exams (data not shown). Routine infant or child health check led the list of nonillness conditions with 43.3 million visits in 2007, or 3.6 percent of all ambulatory care visits. All but 4 of the top 35 diagnoses were also among the top 35 reported in 2006; no significant changes were noted between any, except for a small increase in visits for benign neoplasms. Table 6 shows the 35 leading diagnoses by setting and Table 7 shows the complete classification of primary diagnoses ordered by diagnosis group with breakdowns across ambulatory care settings. Because of the detail shown in Table 7, estimates from 2006 and 2007



[1]Significant difference ($p < 0.05$).
NOTES: HPV is human papillomavirus. MMR is measles-mumps-rubella. Data for HPV vaccine and rotavirus vaccine for 2006 are not shown due to small sample sizes.
SOURCES: CDC/NCHS, National Ambulatory Medical Care Survey and National Hospital Ambulatory Medical Care Survey.

Figure 3. Number of occurrences of selected viral vaccines at ambulatory care visits: United States, 2006 and 2007

were averaged to improve reliability. The classification scheme used in Table 7 is described in the text Table.

Table 8 shows data on injury visits. There were an estimated 156.8 million injury visits in 2007, or 13.1 percent of all ambulatory medical care visits. About one-quarter (25.1 percent) were made to hospital EDs. Injury visit rates were significantly higher for persons aged 65–74 and 75 and over than for all other age groups. However, older persons utilized nonemergency settings for injury visits proportionately more often than younger persons did. About 31 percent of injury visits by those under age 45 were to EDs compared with 18 percent of injury visits by those aged 45 and over (calculated from data in Table 8). Males under age 24 had higher rates of injury visits than females, but rates were not different for other age categories.

In 2007, medication therapy was reported at 73.5 percent of all ambulatory care visits, not significantly different than the 71.6 percent of visits in 2006. An estimated 2.7 billion medications, including over-the-counter preparations, immunizations, allergy shots, anesthetics, and dietary supplements, were provided, prescribed, or continued at ambulatory care visits (Table 9). Each such occurrence is referred to as a ‘‘drug mention’’ in NAMCS and NHAMCS. Central nervous system agents were the most common therapeutic category (22.7 drugs per 100 drug mentions). Within that group, analgesics were most frequently reported, accounting for 13.1 drugs per 100 mentions, and were most often utilized at primary care and ED visits (Tables 10 and 11). Among the broad therapeutic classes, cardiovascular agents (15.4 mentions per 100 drugs) and respiratory agents (9.6 mentions per 100 drugs) were also prominent. Small but significant increases were noted for anticonvulsant drugs and antiemetics.

Although viral vaccines account for only a small proportion of all drug mentions in general, they were reported significantly more often in 2007 than in 2006, up 79 percent from 33.2 million to 59.3 million occurrences. This increase appears to be driven mainly by four vaccines: influenza virus vaccine, occurrences of which jumped 88 percent from 2006 to 2007; varicella virus vaccine, up 127 percent since 2006; human papillomavirus (HPV) vaccine; and rotavirus vaccine (Figure 3). Influenza virus vaccine was the most frequently reported viral vaccine, accounting for 27.9 percent of all viral vaccines reported at ambulatory care visits, while varicella virus vaccine accounted for 11.3 percent (data not shown).

In February 2007, the Advisory Committee on Immunization Practices (ACIP), a panel of experts who provide guidance to the Secretary and Assistant Secretary at the Department of Health and Human Services, and to CDC, released their recommendations for the 2007–2008 flu season. These included some updates from the previous season’s recommendations, specifically that children aged 6 months through 8 years should now receive two doses of vaccine if they had not been vaccinated previously, and that children aged 6 months through 8 years who received only one dose in their first year of vaccination should now receive two doses the following year (6). NAMCS and NHAMCS data for 2007 showed significant increases in the number and rate of visits by children under age 15 where influenza virus vaccine was provided or prescribed (data not shown). It should be kept in mind that NAMCS does not include certain sites where people are likely to receive influenza vaccines (for example, schools, workplaces, and retail settings). Therefore, NAMCS data will underestimate the number of such vaccines actually administered (7).

In June 2006, ACIP voted to recommend that all children should routinely receive two doses of varicella vaccine, rather than the single dose previously recommended. In addition, the committee recommended that all adolescents and adults who missed the second dose be given a ''catch-up'' dose of vaccine (8).

The HPV vaccine, manufactured by Merck and Company, Inc. and marketed as Gardasil, was approved by the Food and Drug Administration (FDA) in June 2006 (9). It became the first vaccine to be marketed for the prevention of cancer; it is effective against the virus that causes most cervical, vaginal, and vulvar cancers and genital warts. It was also recently approved (October 2009) by FDA for the prevention of genital warts in boys and men (10). Reports of HPV vaccine were few in the 2006 NAMCS and NHAMCS data, but by 2007 the vaccine accounted for 7.3 percent of all viral vaccines reported (data not shown).

In 2006, a new vaccine against rotavirus, a common cause of gastroenteritis in infants and children, was approved by FDA (11). Like the HPV vaccine, this vaccine (RotaTeq by Merck) was barely found in the 2006 NAMCS and NHAMCS data but accounted for 6.5 percent of all viral vaccines in 2007. It replaced an earlier rotavirus vaccine first introduced in 1998 (RotaShield, by Wyeth) that was voluntarily discontinued by the manufacturer in 1999 (ibid). A second rotavirus vaccine (Rotarix, by GlaxoSmithKline) was approved by FDA in 2008 (12).

While the overall rate at which drugs were prescribed at ambulatory care visits did not increase overall compared with 2006, the rate increased significantly for visits to surgical specialists, from 112.5 drugs per 100 visits in 2006 to 163.6 drugs per 100 visits in 2007. The percentage of visits to surgical specialists at which drugs were prescribed also rose from 45.8 percent in 2006 to 55.0 percent in 2007. The use of drug therapy increased significantly at all settings between 1997 and 2007 (Figure 4) and for many specialty groups including internal medicine, pediatrics, obstetrics and gynecology, orthopedic surgery, urology, psychiatry, neurology, and ophthalmology (Figure 5).

For more information or to download NCHS reports or 2007 NAMCS and NHAMCS public-use microdata visit files, visit http://www.cdc.gov/nchs/ahcd.htm.

Table. Reclassification of diagnosis codes for use with National Ambulatory Medical Care Survey and National Hospital Ambulatory Medical Care Survey data: United States, 2006–2007

Diagnosis group	ICD–9–CM code[1]
Infectious and parasitic diseases	001–139
Streptococcal sore throat	034.0
HIV[2] disease	042
Viral warts	078.1
Unspecified viral and chlamydial infections	079.9
Dermatophytosis	110
Candidiasis	112
Other infectious and parasitic diseases	001–033,034.1–041.9,045.0–078.0,078.2–079.8,080–104,111,114–139
Neoplasms	140–239
Malignant neoplasm of colon and rectum	153–154,197.5
Malignant neoplasm of skin	172–173,176.0,198.2
Malignant neoplasm of breast	174–175,198.81
Malignant neoplasm of prostate	185
Malignant neoplasm of lymphatic and hematopoietic tissue	176.5,196,200–208
Other malignant neoplasms	140–152,155–171,176.1–176.4,176.6–184,186–195,197.0–197.4,197.6–198.1, 198.3–198.7,198.82–199,230–234
Benign neoplasm of skin	216
Other benign neoplasm	210–215,217–229
Neoplasm of uncertain behavior and unspecified nature	235–239
Endocrine, nutritional and metabolic diseases, and immunity disorders	240–279
Acquired hypothyroidism	244
Other disorders of the thyroid gland	240–243,245–246
Diabetes mellitus	250
Disorders of lipoid metabolism	272
Obesity	278.0
Other endocrine, nutritional and metabolic diseases, and immunity disorders	251–271,273–277,278.1–279
Diseases of the blood and blood-forming organs	280–289
Anemias	280–285
Other diseases of the blood and blood-forming organs	286–289
Mental disorders	290–319
Schizophrenic disorders	295
Major depressive disorder	296.2–296.3
Other psychoses	290–294,296.0–296.1,296.4–299
Anxiety states	300.0
Neurotic depression	300.4
Alcohol dependence syndrome	303
Drug dependence and nondependent abuse of drugs	304–305
Acute reaction to stress and adjustment reaction	308–309
Depressive disorder, not elsewhere classified	311
Attention deficit disorder	314.0
Other mental disorders	300.1–300.3,300.5–300.9,301–302,306–307,310,312–313,314.1–319
Diseases of the nervous system and sense organs	320–389
Migraine	346
Other disorders of the central nervous system	320–326,330–337,340–345,347–349
Carpal tunnel syndrome	354.0
Other disorders of the nervous system	350–353,354.1–359
Retinal detachment and other retinal disorders	361–362
Glaucoma	365
Cataract	366
Disorders of refraction and accommodation	367
Conjunctivitis	372.0–372.3
Disorders of eyelids	373–374
Other disorders of the eye and adnexa	360,363–364,368–369, 370–371,372.4–372.9,375–379
Disorders of external ear	380
Otitis media and eustachian tube disorders	381–382
Other diseases of the ear and mastoid process	383–389
Diseases of the circulatory system	390–459
Angina pectoris	413
Coronary atherosclerosis	414.0
Other ischemic heart disease	410–412,414.1–414.9
Cardiac dysrhythmias	427

* Figure does not meet standards of reliability or precision.

1 Sum of pay sources exceeds total number of visits because more than one pay source may be reported per visit.

2 SCHIP is State Children's Health Insurance Program.

3 Defined as having only self-pay, no charge, or charity as payment sources.

4 MSA is metropolitan statistical area.

NOTES: Numbers may not add to totals because of rounding. The 2007 National Ambulatory Medical Care Survey included a sample of community health centers (CHCs) in addition to the traditional sample of office-based physicians. Estimates presented in this table include office-based physicians as defined by the American Medical Association, as well as data from a sample of physicians working in CHCs.

* Figure does not meet standards of reliability or precision.

[1]For 2007, race data were missing for 28.7 percent of visits, and ethnicity data were missing for 32.9 percent of visits. Readers are therefore advised to treat these data with caution. In this table, estimates based on imputed race and ethnicity data are shown separately from comparison estimates using unimputed data. Missing race and ethnicity were imputed using a hot deck approach rather than the previously used cold deck strategy. The imputation process is described more fully in the 2007 public-use documentation (http://www.cdc.gov/nchs/ahcd/ahcd_questionnaires.htm). Research is currently under way to evaluate further changes to the imputation strategy for use with 2008 data.

[2]Includes race that was reported directly and imputed values for the 28.7 percent of visits for which race was not reported.

[3]Includes ethnicity that was reported directly and imputed values for the 32.9 percent of visits for which ethnicity was not reported.

[4]Calculations are based on 855,289 visits (in thousands) with race reported directly. The 28.7 percent of visits for which race was missing are excluded from the denominator, so that readers can compare differences between estimates that include and exclude imputed race values.

[5]Calculations are based on 805,515 visits (in thousands) with ethnicity reported directly. The 32.9 percent of visits for which ethnicity was missing are excluded from the denominator, so that readers can compare differences between estimates that include and exclude imputed ethnicity values.

[6]The race groups White, Black or African American, Asian, Native Hawaiian or Other Pacific Islander, American Indian or Alaska Native, and multiple races include persons of Hispanic and not Hispanic origin. Persons of Hispanic origin may be of any race. Starting with data year 1999, race-specific estimates have been tabulated according to 1997 Standards for Federal Data on Race and Ethnicity and are not strictly comparable with estimates for earlier years. The percentage of visit records with multiple races indicated is small and lower than what is typically found for self-reported race in household surveys.

NOTES: Numbers may not add to totals because of rounding. The 2007 National Ambulatory Medical Care Survey included a sample of community health centers (CHCs) in addition to the traditional sample of office-based physicians. Estimates presented in this table include office-based physicians as defined by the American Medical Association, as well as data from a sample of physicians working in CHCs.

[1]Visit rates for age, sex, and region are based on the July 1, 2007 set of estimates of the civilian noninstitutionalized population of the United States as developed by the Population Division, U.S. Census Bureau.

[2]Population estimates by metropolitan statistical area status are based on estimates of the civilian noninstitutionalized population of the United States as of July 1, 2007 from the 2007 National Health Interview Survey, National Center for Health Statistics, compiled according to the December 2006 Office of Management and Budget definitions of core-based statistical areas. See http://www.census.gov/population/www/metroareas/metroarea.html for more about metropolitan statistical definitions.

[3]Population estimates for primary expected source of payment are based on data from the 2007 National Health Interview Survey that were recoded according to the following hierarchy: Medicare, Medicaid/SCHIP, Private Insurance, and No Insurance.

[4]Derived by recoding the expected sources of payment item according to the following hierarchy: Medicare, Medicaid/SCHIP, Private Insurance, and No Insurance. "No insurance" reflects visits for which only self-pay, no charge, or charity were reported as the expected source(s) of payment.

[5]SCHIP is State Children's Health Insurance Program.

[6]Defined as having only self-pay, no charge, or charity as payment sources.

[7]MSA is metropolitan statistical area.

NOTE: The 2007 National Ambulatory Medical Care Survey included a sample of community health centers (CHCs) in addition to the traditional sample of office-based physicians. Estimates presented in this table include office-based physicians as defined by the American Medical Association, as well as data from a sample of physicians working in CHCs.

[1]For 2007, race data were missing for 28.7 percent of visits, and ethnicity data were missing for 32.9 percent of visits. Readers are therefore advised to treat these data with caution. In this table, estimates based on imputed race and ethnicity data are shown separately from comparison estimates using unimputed data. Missing race and ethnicity were imputed using a hot deck approach rather than the previously used cold deck strategy. The imputation process is described more fully in the 2007 public-use documentation (http://www.cdc.gov/nchs/ahcd/ahcd_questionnaires.htm). Research is currently under way to evaluate further changes to the imputation strategy for use with 2008 data.

[2]Includes race that was reported directly and imputed values for the 28.7 percent of visits for which race was not reported.

[3]Includes ethnicity that was reported directly and imputed values for the 32.9 percent of visits for which ethnicity was not reported.

[4]Calculations are based on 855,289 visits (in thousands) with race reported directly. The 28.7 percent of visits for which race was missing are excluded from the denominator, so that readers can compare differences between estimates that include and exclude imputed race values.

[5]Calculations are based on 805,515 visits (in thousands) with ethnicity reported directly. The 32.9 percent of visits for which ethnicity was missing are excluded from the denominator, so that readers can compare differences between estimates that include and exclude imputed ethnicity values.

[6]Visit rates for age, sex, and region are based on the July 1, 2007 set of estimates of the civilian noninstitutionalized population of the United States as developed by the Population Division, U.S. Census Bureau.

[7]The race groups White, Black or African American, Asian, Native Hawaiian or Other Pacific Islander, American Indian or Alaska Native, and multiple races include persons of Hispanic and not Hispanic origin. Persons of Hispanic origin may be of any race. Starting with data year 1999, race-specific estimates have been tabulated according to 1997 Standards for Federal Data on Race and Ethnicity and are not strictly comparable with estimates for earlier years. The percentage of visit records with multiple races indicated is small and lower than what is typically found for self-reported race in household surveys.

NOTES: The 2007 National Ambulatory Medical Care Survey included a sample of community health centers (CHCs) in addition to the traditional sample of office-based physicians. Estimates presented in this table include office-based physicians as defined by the American Medical Association, as well as data from a sample of physicians working in CHCs. Also, in this table, estimates of reported plus imputed data were flagged as unreliable if the reported estimate alone was based on fewer than 30 cases. This occurred for three estimates only, in the Asian, Native Hawaiian or Other Pacific Islander, and Multiple Race categories.

Table 5. Ambulatory care visits by setting type, according to characteristics of patient's ZIP Code of residence: United States, 2007

Characteristic	Number of visits in thousands	(Standard error in thousands)	Percent distribution	(Standard error of percent)	Total	Primary care offices	Surgical specialty offices	Medical specialty offices	Hospital outpatient departments	Hospital emergency departments

* Figure does not meet standards of reliability or precision.

[1]Excludes 4.9 percent of visits for which data were missing. For each record, county of residence was determined using patient ZIP Code and was then matched to the National Center for Health Statistics' Urban-Rural Classification Scheme for Counties described here: http://www.cdc.gov/nchs/data_access/urban_rural.htm.

[2]Excludes 7.2 percent of visits for which data were missing. Median household income was based on the patient's ZIP code of residence matched to data from the 2000 census. Population quartiles were estimated using U.S. Census Bureau data aggregated at the ZIP Code level.

[3]Excludes 7.2 percent of visits for which data were missing. Education level was based on patient's ZIP Code of residence matched to data from the 2000 census. Population quartiles were estimated using data aggregated at the ZIP Code level.

[4]Excludes 7.2 percent of visits for which data were missing.

NOTES: Numbers may not add to totals because of rounding. The 2007 National Ambulatory Medical Care Survey included a sample of community health centers (CHCs) in addition to the traditional sample of office-based physicians. Estimates presented in this table include office-based physicians as defined by the American Medical Association, as well as data from a sample of physicians working in CHCs.

* Figure does not meet standards of reliability or precision.

– Quantity zero.

. . . Category not applicable.

0.0 Quantity more than zero but less than 0.05.

[1]Based on the *International Classification of Diseases, Ninth Revision, Clinical Modification* (13). See the text Table for the list of codes that constitute each category.

NOTES: Numbers may not add to totals because of rounding. Figures are annual averages. The 2007 National Ambulatory Medical Care Survey included a sample of community health centers (CHCs) in addition to the traditional sample of office-based physicians. Estimates presented in this table include office-based physicians as defined by the American Medical Association, as well as data from a sample of physicians working in CHCs.

[1]Visit rates are based on the July 1, 2007 set of estimates of the civilian noninstitutionalized population of the United States as developed by the Population Division, U.S. Census Bureau.

NOTES: Numbers may not add to totals because of rounding. The 2007 National Ambulatory Medical Care Survey included a sample of community health centers (CHCs) in addition to the traditional sample of office-based physicians. Estimates presented in this table include office-based physicians as defined by the American Medical Association, as well as data from a sample of physicians working in CHCs.

Table 9. Drug visits, and drug mentions at ambulatory care visits, by setting type: United States, 2007

Ambulatory care setting	Drug visits[1]				Drug mentions[2]				Percent drug visits[3]		Drug mention rates[4]	
	Number in thousands	(Standard error in thousands)	Percent distribution	(Standard error of percent)	Number in thousands	(Standard error in thousands)	Percent distribution	(Standard error of percent)	Percent	(Standard error of percent)	Number of drug mentions per 100 visits	(Standard error of rate)
All ambulatory care settings	881,858	(33,266)	100.0	. . .	2,688,748	(122,222)	100.0	. . .	73.5	(0.8)	224.1	5.9
Primary care offices	445,864	(24,202)	50.6	(1.6)	1,301,050	(80,510)	48.4	(1.9)	77.3	(1.0)	225.6	7.9
Medical specialty offices	173,642	(11,348)	19.7	(1.1)	627,819	(56,028)	23.3	(1.7)	78.5	(1.9)	284.0	14.8

[1]Visits at which one or more drugs were provided, prescribed, or continued by the provider. A drug mention is defined as any medication that is provided, prescribed, or continued at the visit, including over-the-counter preparations, immunizations, desensitizing agents, and anesthetics. Up to eight mentions are collected per visit.

[2]Number of drugs provided, prescribed, or continued at visits (up to eight per visit).

[3]Percentage of visits that included one or more drug mentions (number of drug visits divided by number of all visits multiplied by 100).

[4]Average number of drugs that were provided, prescribed, or continued per 100 visits (number of drug mentions divided by total number of all visits multiplied by 100).

NOTES: Numbers may not add to totals because of rounding. The 2007 National Ambulatory Medical Care Survey included a sample of community health centers (CHCs) in addition to the traditional sample of office-based physicians. Estimates presented in this table include office-based physicians as defined by the American Medical Association, as well as data from a sample of physicians working in CHCs.

* Figure does not meet standards of reliability or precision.

. . . Category not applicable.

[1]Based on Multum Lexicon second-level therapeutic drug category (see http://www.multum.com/lexicon.htm). Drugs for which the second-level category was not known are not included.

[2]Total of all therapeutic drug categories will exceed total number of drug mentions because up to four categories may be coded for each drug.

[3]Based on an estimated 2,688,748,000 drug mentions at ambulatory care visits in 2007. A drug mention is defined as any medication that is provided, prescribed, or continued at the visit, including over-the-counter preparations, immunizations, desensitizing agents, and anesthetics.

NOTES: Numbers may not add to totals because of rounding. The 2007 National Ambulatory Medical Care Survey included a sample of community health centers (CHCs) in addition to the traditional sample of office-based physicians. Estimates presented in this table include office-based physicians as defined by the American Medical Association, as well as data from a sample of physicians working in CHCs.

0.0 Quantity more than zero but less than 0.05.

* Figure does not meet standards of reliability or precision.

. . . Category not applicable.

– Quantity zero.

[1]Based on Multum Lexicon first-, second-, and third-level therapeutic drug categories (see http://www.multum.com/Lexicon.htm).

[2]Total of all therapeutic drug categories will exceed total number of drug mentions because up to four categories may be coded for each drug.

[3]Based on an estimated 2,688,748,000 drug mentions at ambulatory care visits in 2007. A drug mention is defined as any medication that is provided, prescribed, or continued at the visit, including over-the-counter preparations, immunizations, desensitizing agents, and anesthetics. Up to eight mentions are collected per visit.

NOTES: Numbers may not add to totals because of rounding. The 2007 National Ambulatory Medical Care Survey included a sample of community health centers (CHCs) in addition to the traditional sample of office-based physicians. Estimates presented in this table include office-based physicians as defined by the American Medical Association, as well as data from a sample of physicians working in CHCs.

Vital and Health Statistics Series Descriptions

ACTIVE SERIES

Series 1. **Programs and Collection Procedures**—This type of report describes the data collection programs of the National Center for Health Statistics. Series 1 includes descriptions of the methods used to collect and process the data, definitions, and other material necessary for understanding the data.

Series 2. **Data Evaluation and Methods Research**—This type of report concerns statistical methods and includes analytical techniques, objective evaluations of reliability of collected data, and contributions to statistical theory. Also included are experimental tests of new survey methods, comparisons of U.S. methodologies with those of other countries, and as of 2009, studies of cognition and survey measurement, and final reports of major committees concerning vital and health statistics measurement and methods.

Series 3. **Analytical and Epidemiological Studies**—This type of report presents analytical or interpretive studies based on vital and health statistics. As of 2009, Series 3 also includes studies based on surveys that are not part of continuing data systems of the National Center for Health Statistics and international vital and health statistics reports.

Series 10. **Data From the National Health Interview Survey**—This type of report contains statistics on illness; unintentional injuries; disability; use of hospital, medical, and other health services; and a wide range of special current health topics covering many aspects of health behaviors, health status, and health care utilization. Series 10 is based on data collected in this continuing national household interview survey.

Series 11. **Data From the National Health Examination Survey, the National Health and Nutrition Examination Surveys, and the Hispanic Health and Nutrition Examination Survey**—In this type of report, data from direct examination, testing, and measurement on representative samples of the civilian noninstitutionalized population provide the basis for (1) medically defined total prevalence of specific diseases or conditions in the United States and the distributions of the population with respect to physical, physiological, and psychological characteristics, and (2) analyses of trends and relationships among various measurements and between survey periods.

Series 13. **Data From the National Health Care Survey**—This type of report contains statistics on health resources and the public's use of health care resources including ambulatory, hospital, and long-term care services based on data collected directly from health care providers and provider records.

Series 20. **Data on Mortality**—This type of report contains statistics on mortality that are not included in regular, annual, or monthly reports. Special analyses by cause of death, age, other demographic variables, and geographic and trend analyses are included.

Series 21. **Data on Natality, Marriage, and Divorce**—This type of report contains statistics on natality, marriage, and divorce that are not included in regular, annual, or monthly reports. Special analyses by health and demographic variables and geographic and trend analyses are included.

Series 23. **Data From the National Survey of Family Growth**—These reports contain statistics on factors that affect birth rates, including contraception and infertility; factors affecting the formation and dissolution of families, including cohabitation, marriage, divorce, and remarriage; and behavior related to the risk of HIV and other sexually transmitted diseases. These statistics are based on national surveys of women and men of childbearing age.

DISCONTINUED SERIES

Series 4. **Documents and Committee Reports**—These are final reports of major committees concerned with vital and health statistics and documents. The last Series 4 report was published in 2002. As of 2009, this type of report is included in Series 2 or another appropriate series, depending on the report topic.

Series 5. **International Vital and Health Statistics Reports**—This type of report compares U.S. vital and health statistics with those of other countries or presents other international data of relevance to the health statistics system of the United States. The last Series 5 report was published in 2003. As of 2009, this type of report is included in Series 3 or another series, depending on the report topic.

Series 6. **Cognition and Survey Measurement**—This type of report uses methods of cognitive science to design, evaluate, and test survey instruments. The last Series 6 report was published in 1999. As of 2009, this type of report is included in Series 2.

Series 12. **Data From the Institutionalized Population Surveys**—The last Series 12 report was published in 1974. Reports from these surveys are included in Series 13.

Series 14. **Data on Health Resources: Manpower and Facilities**—The last Series 14 report was published in 1989. Reports on health resources are included in Series 13.

Series 15. **Data From Special Surveys**—This type of report contains statistics on health and health-related topics collected in special surveys that are not part of the continuing data systems of the National Center for Health Statistics. The last Series 15 report was published in 2002. As of 2009, reports based on these surveys are included in Series 3.

Series 16. **Compilations of Advance Data From Vital and Health Statistics**—The last Series 16 report was published in 1996. All reports are available online, and so compilations of Advance Data reports are no longer needed.

Series 22. **Data From the National Mortality and Natality Surveys**—The last Series 22 report was published in 1973. Reports from these sample surveys, based on vital records, are published in Series 20 or 21.

Series 24. **Compilations of Data on Natality, Mortality, Marriage, and Divorce**—The last Series 24 report was published in 1996. All reports are available online, and so compilations of reports are no longer needed.
