### Res. No. 412

Resolution calling upon the United States Food and Drug Administration to require that caffeine content be included on nutrition labeling panels.

By Council Members Fidler, Barron, Brewer, Chin, Gonzalez, James, Lander, Nelson, Palma, Williams, Cabrera, Mendez and Koo

Whereas, Caffeine belongs to a group of drugs called central nervous system stimulants (CNS); and

Whereas, According to a report by the University of Kansas on caffeine, caffeine narrows blood vessels in the brain and stimulates the cerebral cortex, which can help a person think more rapidly and clearly, and expands blood vessels in other places in the body, which can help to improve coordination; and

Whereas, Caffeine is used medically as a mild stimulant, and, combined with certain analgesics, as a headache eradicator; and

Whereas, According to the Center for Science in the Public Interest, (CPSI), in healthy people, moderate amounts of caffeine have little effect on blood pressure or heart rate, but in certain individuals, larger does can

cause irregular heartbeat, muscle tremors, agitation or ringing in the ears, and may also cause miscarriages, insomnia and anxiety; and

Whereas, The CPSI also points out that caffeine is the only drug that is widely added to the food supply; and

Whereas, Caffeine is found in many products that are consumed by children as well as adults, and many people are unaware of the amounts of caffeine contained in various products; and

Whereas, Nutritional labeling, regulated by the federal Food and Drug Administration, is intended to aid consumers in making informative choices about what they eat and drink; and

Whereas, By indicating on such labeling the amount of caffeine in food products, consumers would be able to make informed choices for themselves and their families regarding the amount of caffeine they ingest; now, therefore, be it

Resolved, That the Council of the City of New York calls upon the United States Food and Drug Administration to require that caffeine be included on nutrition labeling panels.
